

AirMagnet® Survey PRO

Wireless Design & Site Survey Software

Key Features

- Plan and design Wi-Fi 6 networks without physically rolling out any access points
- Collect real-world data by performing true end-user experience measurements using any Wi-Fi adapter or AirMapper™ Site Survey on the AirCheck® G2 and EtherScope™ nXG
- Generate heatmaps that provide full visibility of WLAN coverage, noise, SNR, interference, throughput, data rates, retries, loss, Voice-over-Wi-Fi MOS, and more
- Save time by performing active, passive, and spectrum surveys in a single walk-through

Overview

AirMagnet Survey PRO enables network professionals to design, deploy, and validate Wi-Fi 6 wireless LAN networks for optimal performance, and compliance. It can calculate the ideal quantity, placement, and configuration of APs for a successful wireless LAN deployment. AirMagnet Survey PRO goes beyond simply verifying RF coverage, by plotting actual end-user network performance in terms of connection speed, throughput, and packet statistics by allowing you to use any Wi-Fi adapter or AirMapper™ Site Survey on the AirCheck G2 and EtherScope nXG. Survey PRO helps you get security Wi-Fi installations right the first time, preventing costly rework and user complaints.

Key Features

Wi-Fi 6 Survey

- Measure and assess end-user experience
- Shows coverage of specific 802.11 parameters:
 - Modulation and Coding Schemes (MCS)
 - Channel width
 - Operating mode (802.11 a/b/g/n/ac/ax)
- Complete Wi-Fi heatmap of performance metrics
- Allows IT staff to design and deploy WLAN accurately

Real-World Data

- Emulates real-world client behavior
- Faster and easier Wi-Fi site surveys with AirMapper™ Site Survey
- Create “what-if” scenarios:
 - Changing AP transmit power
 - Channel
 - Environmental noise
- Simulate moving, removing, or adding APs
- Avoid interference and over-allocation

Wi-Fi 6 Planning

- Accurately design WLANs by:
 - Modeling building construction materials/obstructions
 - Finding ideal AP placement
 - Visualizing coverage across multiple floors
- Validate results with real-world data
- Account for RF interference from non-802.11 devices
- Test plans against design requirements

VoWLAN Deployment

- Built-in voice readiness verification system
- Validate and plot:
 - Phone call quality (MOS)
 - Capacity
 - Other voice specific parameters

Outdoor

- Fully-automated outdoor wireless site surveys
- Leverage GPS device to collect outdoor wireless data
- Import street maps of any city
- Export heatmaps into Google Earth™
