Shared Results Platform with Wired Testers	✓ Yes	✗ No	✗ No

¹ Requires the NXT-2000 spectrum analyzer, included in this kit.

² Requires a supported third-party spectrum analyzer, sold separately.

³ Ekahau and Hamina identify unknown APs over the air; neither confirms whether that AP is connected to your wired network.

⁴ Wired testing is via a paired NetAlly Test Accessory or LinkSprinter over Link-Live™, or a USB-to-Ethernet adapter for basic connectivity. Test Accessory included in this kit.

Why NetAlly wins

- **One vendor for the whole network.** Ekahau and Hamina don't make a wired tester. Teams that need both buy two vendors, two support contracts, and two reporting systems. NetAlly covers copper, fiber, and Wi-Fi, with results in one Link-Live account.
- **No second device to carry, charge, or depend on.** AirCheck G3 Pro is a purpose-built handheld tester with ten hours of runtime. Both competitors require a phone, tablet, or laptop tethered to a survey device. That's another device to manage, another battery, another thing left in the truck.
- **Licensed per device, not per user.** Two techs sharing one AirCheck across shifts is one license. Two techs sharing one Sidekick or Nomad is two software seats.
- **Neither competitor's troubleshooting bundle can produce the report.** Both competitor bundles priced above are data-collection tiers. Ekahau states that detailed review and advanced analysis of collected data requires a separate Ekahau Plan or AI Pro license. Hamina's documentation limits Onsite to lightweight analysis; in-depth analysis and report generation happen in Hamina Network Planner, a separate subscription. AirCheck G3 Pro results upload to Link-Live and generate a customer-ready survey report with your AllyCare Pro subscription.
