Register your AirCheck G3

Registering your product with NetAlly gives you access to valuable information on product updates, troubleshooting procedures, and other services.

Register on the [NetAlly Support Page](#).

Introduction

The AirCheck G3 Portable Network Expert is a rugged, hand-held tool for testing and analyzing Wi-Fi networks. It features applications developed by NetAlly for network discovery, measurement, and validation, which are available from the [Home](#) and [Apps](#) screens.

All NetAlly hand-held testers include access to Link-Live Cloud Service at Link-Live.com. Link-Live is an online system for collecting, organizing, analyzing, and reporting your test results. Test data is automatically uploaded once your tester is properly configured. Visit Link-Live.com and "Claim" your AirCheck G3 to access these features.

Activating Your AirCheck G3 Support

The AirCheck-G3 comes with one year of NetAlly's AllyCare support. You must activate this support before you can start using your tester.

To activate support, go to the NetAlly support site:

support.netally.com/Login/?type=customer

Begin by typing your company email into the field for NEW USERS, and then click **Sign up**.

Follow the screen instructions to register your product. You will then receive an email with additional instructions to register and receive an activation code.

The first time you boot your AirCheck-G3, you must enter the activation code before you can begin using your product. You can then use all features on your AirCheck G3.

How to Use this Guide

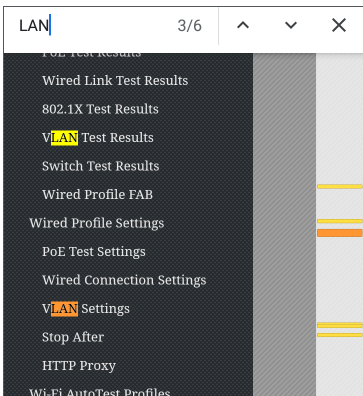

This user guide describes the AirCheck G3's testing functionality and basic elements of the system interface.

The guide is meant for users who are knowledgeable about network operations, tests, and measurements.

The AirCheck G3 is also referred to as just AirCheck G3 or the "unit" in this guide.

- Tap **blue links** to go to their destinations. [Underlined blue links](#) open external websites.
- Tap bookmarks in the list on the left to go to the corresponding section.
- Tap headings in the **Contents** list that starts on page 2 to go to the corresponding sections.
- To search for a word or phrase:
 1. Tap the browser menu  icon in the upper right.
 2. Select **Find in Page** from the menu.

3. Enter the search text.
4. Tap the find icon . This displays the text at the top of the screen. Tap the up and down arrows to search forwards and backwards for the text. In the image below, the user has searched on "LAN". Tap the highlight bars on the right to go to the corresponding manual text.

Online and Local Versions of This Guide and Videos

- Manuals are also available for download at: <https://www.netally.com/support/user-guides/>
- To view the User Guide on your AirCheck G3, you must have a network connection with access to the internet (see [Connecting to Wi-Fi](#)). When you tap on **Guides > User Guide** on the [Home Screen](#), this user guide is downloaded and displays on your unit.
- After you have downloaded the User Guide to your unit, the guide is stored in a local cache for the browser. You do not have to repeat the download unless you [change the device language](#) or clear the browser cache.
- The Guides icon on the Home Screen (used to access this guide) also gives access to training and information videos specific to this product.

International Versions of This Guide

A Chinese or English AirCheck G3 user guide is available if you [change the device language](#) to one of those languages. The English user manual is used if you change the language to German, Japanese, or Korean.

Differences Between Models

The Model number of your AirCheck G3 appears on the [About Screen](#) and is printed on the back panel of your tester. This manual covers all models and identifies features specific to each model if there are differences. In general:

- AirCheck-G3-PRO: Supports 2.4 GHz, 5 GHz and 6 GHz frequency bands; supports 802.11a/b/g/n/ac/ax Wi-Fi standards; does not support 802.11d specification.
- AirCheck-G3E-PRO: Supports 2.4 GHz, 5 GHz and 6 GHz frequency bands; supports 802.11a/b/g/n/ac/ax Wi-Fi standards; supports 802.11d specification.
- AirCheck-G3C-PRO: Supports 2.4 GHz, 5 GHz frequency band; does not support 802.11d specification.

For more information, see [AirCheck G3 Specifications](#).

Buttons and Ports

Button and port functions on your AirCheck G3 tester are described below.

FEATURE

DESCRIPTION

Status LED

Red: tester off, USB-C power adapter connected

FEATURE	DESCRIPTION
	<p>Green: tester on, screen off (with or without power adapter)</p> <p>Rate of blinking LED (red or green) shows % battery charge:</p> <ul style="list-style-type: none"> • 2 blinks per second: battery low, 0-24% charged • 1 blink per second: 25-49% charged • 1 blink per 2 seconds: 50-74% charged • 1 blink per 4 seconds: $\geq 75\%$ charged • No blinks: fully charged
USB Type-A Ports (2)	Connects to any USB device. (FAT32-formatted device required only for manual software updates.)
USB Type-C On-the-Go Port	Connects to a USB Type-C connector for file transfer and to charge unit with the included AC adapter

FEATURE	DESCRIPTION
Volume Buttons	Increase or decrease the audio volume for external Bluetooth or USB speakers or headsets
Power Button	Press and hold to display menu for Power off or Restart

See [Test and Management Ports](#) for detailed explanations of the port functions.

See [Updating Software](#) for requirements on updating system software.

Refer to the product [Specifications](#) if needed.

Using a Kensington Lock

The back panel of the unit has two rows of six vent slots on either side of the serial number label. You can use a standard Kensington lock with any slot in these two rows.

Charging and Power

Your AirCheck G3 includes a USB-C 15V/3A power adapter.

 **CAUTION:** Only the NetAlly-supplied power adapter is supported.

To begin charging the internal lithium-ion battery, plug the included power adapter into an AC outlet and the USB-C charging port on the left side of the tester. The Status LED blinks red when the tester is off and charging and turns solid red at full charge. Refer to the [Specifications](#) for battery run duration and charge times.

Powering On

- To start the tester, hold down the Power Button for approximately one second until the Status LED turns green.
- When the display goes into Sleep mode, the Status LED blinks green to indicate the battery level. Tap the Power Button briefly to wake up the display. (Set the timing for display sleep and auto power off in the )

[Device Settings.](#))

- To shut down or restart, hold down the Power Button for one second until the “Power off” and “Restart” dialog box appears on the touchscreen, and then tap **Power off** or **Restart**.
- If the tester is unresponsive to a normal power off, press and hold the Power Button for five seconds to perform a hard shutdown.

Safety and Maintenance

Observe the following safety information:

Use only the Adapter provided to charge the battery.

Ensure that the Adapter is easily accessible.

Use the proper terminals and cables for all connections.

 **CAUTION:** To avoid possible electric shock or personal injury, follow these guidelines:

- Do not use the product if it is damaged. Before using the product, inspect the case, and look for cracked or missing plastic.
- Do not operate the product around explosive gas, vapor, or dust.
- Do not try to service the product. There are no serviceable parts.
- Do not replace the battery. There is risk of explosion if the battery is replaced by an incorrect battery type.

- Dispose of battery packs and electronics in compliance with your institution's disposal instructions.
- Use as directed. If this product is used in a manner not specified by the manufacturer, the protection provided by the product may be impaired.

Safety Symbols

Warning or Caution: Risk of damage to or destruction of equipment or software.

Warning: Risk of electrical shock.

Not for connection to a public telephone system.

Cleaning

To clean the display, use a lens cleaner and a soft, lint-free cloth.

To clean the case, use a soft cloth that is moist with water or a weak soap.

Scratches on the dark-colored plastic can be removed by *lightly* scrubbing a 1:2 mixture of toothpaste to water onto the affected surface with a bristled brush.

 **CAUTION:** Do not use solvents or abrasive materials that may damage the product.

Legal Notification

Use of this product requires acceptance of the Terms and Conditions available at <http://NetAlly.com/terms-and-conditions> or which accompanies the product at the time of shipment or, if applicable, the legal agreement executed by and between NetAlly and the purchaser of this product.

Open-Source Software Acknowledgment: This product may incorporate open-source components. NetAlly will make available open-source code components of this product, if any, at Link-Live.com/OpenSource.

NetAlly reserves the right, at its sole discretion, to make changes at any time in its technical information, specifications, service, and support programs.

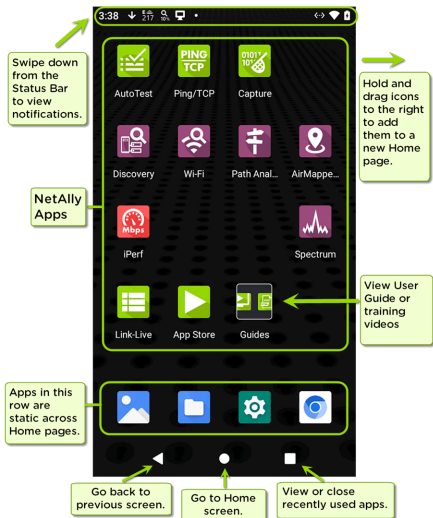

© 2019-2025 NetAlly

Home and System Interface

This chapter explains how to use the features of the system Home screen and user interface to navigate and organize your device.

The AirCheck G3 interface supports many of the operations typical of any hand-held device. Use dragging and **swiping** motions on the touchscreen to navigate through apps, open side menus, drag down the **Notification Panel** from the Status Bar at the top of the Home screen, or drag up the **Apps** screen from the bottom.

Home Screen

Like other hand-held devices, your AirCheck G3 Home screen is customizable. The image above shows the default configuration, but you can

add, remove, and reorganize app icons and widgets to serve your purposes.

You can also create more Home pages by tapping, holding, and dragging an app icon to the right from the main Home screen.

See the [Apps screen](#) section for instructions on adding more apps to your Home pages.

Navigating the System

The navigation actions you can perform to move through screens and panels on the AirCheck G3 are the same as those you would use to navigate many other phone or tablet devices.

The main device navigation buttons appear at the bottom of the touch screen.

The back icon returns to the previous screen.

The circle icon opens the Home screen.

The square icon displays your recently used applications for easily switching between them. This is also the screen where you can close, or stop, the open applications.

TIP: Double tap the square icon to switch back to the previous app you were using and to switch back and forth between two app screens (like a testing app and this User Guide).

Swiping

Touch and drag your finger or "swipe" up, down, left, and right to move through pages of the [Home screen](#) and applications, scroll up or down, and pull out navigation drawers and panels.

Long Pressing

Touch and hold or "long press" files or application icons to reveal additional operations.

For example, you can long press a file name in the [Files Application](#) to reveal the top toolbar with options for [sharing](#) , deleting, or moving the file.

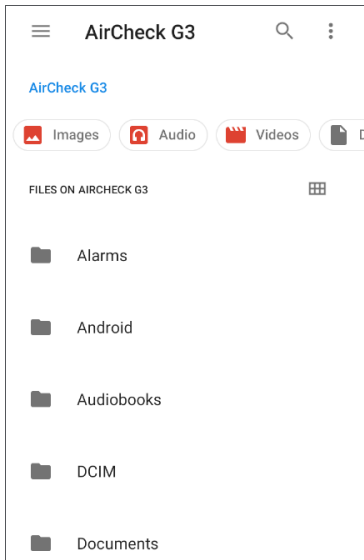

Additional options often appear in an overflow menu, designated by the action overflow icon .

You can also long press on text on most screens to open options for copying and [sharing](#) the text.

Left-Side Navigation Drawer

In the [Files](#)  app, tap the Menu icon or  or swipe right to open the navigation drawer. It displays the folders in your file system.

See the [Navigation Drawer](#) topic for additional information.

System Status Bar and Notifications

The Status Bar across the top of the screen displays notification icons from the system as well as AirCheck G3-specific icons related to your network connections and test statuses.

See [Test and Port Status Notifications](#) for details about the icons and notifications related to AirCheck G3 network connections, testing, and management.

Tap and swipe down on the Status Bar to open the Notification Panel.

Notification Panel

The Notification Panel contains notifications from your device, such as downloads and installs, inserted hardware, captured screenshots, app and connection statuses, and updates. The panel also displays common system settings icons for quick access.

Swipe (touch and drag) downwards on the Status Bar at very top of the screen to slide down the Notification Panel.

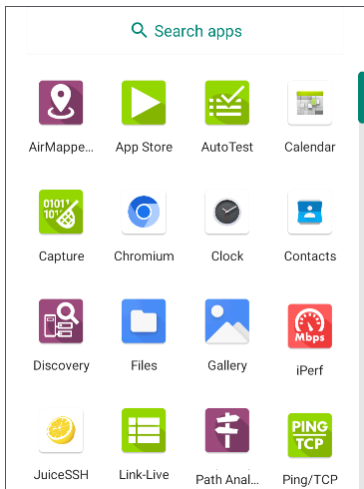

- Tap the title and down arrow  on a notification (or swipe down on it) to expand the box and view more details or options.
- Tap the middle of a notification to open the related app, image, or device settings or to perform other related actions.
- Swipe left on a notification to dismiss it.

NOTE: Because they are essential to the AirCheck G3 testing functions, you cannot dismiss the [test and management port-related test and port status notifications](#).

- Tap **CLEAR ALL** at the lower right of the panel to dismiss all system notifications.

Apps Screen and Store

To access the apps that are not shown on the Home screen, swipe up on the Home screen or tap the up arrow icon .

The Apps screen displays all the apps on your device. The image above is an example. Your

Apps screen may contain different third-party apps.

- Tap an app's icon to open the app.
- Hold and drag an icon upwards to add it to your Home screens.
- Touch and hold (long press) an icon to view App Info or access widgets you can add to the Home screen and other actions you can perform.

App Store

From the Home Screen or Apps Screen, open the NetAlly  App Store to download third-party system applications to use on your AirCheck G3.

NOTE: Your unit must be "claimed" to [Link-Live Cloud Service](#) at Link-Live.com to access the App Store.

- Tap the search icon to search for an App.
- Tap **UPDATES** to view available updates of installed apps.
- To request that an App be added to the App Store, visit the Apps ► page at [Link-](#)

[Live.com](https://live.com), and select the floating action button (FAB)  at the lower right corner to **Request or Upload an App.**

Device Settings

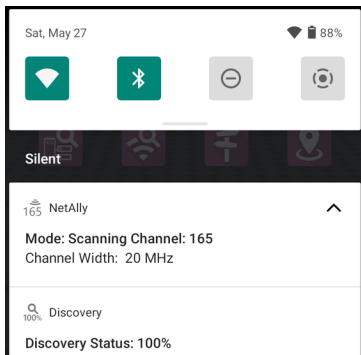

To access the system device settings, tap the Settings  icon at the bottom of the [Home screen](#).

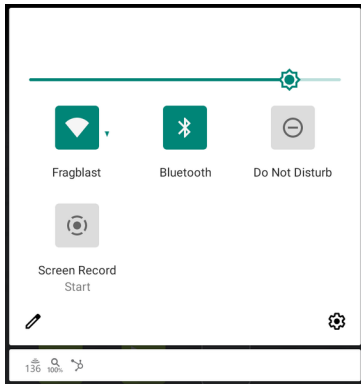

The device settings screen lets you adjust the display; adjust sound (including volume for external Bluetooth or USB speakers or headsets); set date and time; view installed applications and memory devices; [connect to Wi-Fi](#); or [reset to factory defaults](#).

Quick Settings Panel

You can also access some of the most common device settings, like Wi-Fi, from the Quick Settings Panel by swiping down from the [Status Bar](#) at the top of the touchscreen.

Swipe down twice to open the full Quick Settings Panel.

- Touch and drag the slider control at the top of the panel to adjust the screen's brightness.
- Tap an icon in the panel to enable or disable the corresponding feature.
- Touch and hold an icon to open the relevant device setting screen, if there is one.

Auto Power Off

Activating the Auto Power Off function helps to extend the battery run time.

1. From the Device Settings , select **Display**.
2. On the Display settings screen, tap **Device auto power off**.
3. In the pop-up dialog box, select how long you want the unit to remain On with no activity occurring. The unit automatically powers off after the selected period of inactivity has passed.

Similarly, you can adjust the setting that controls when the display goes into **Sleep** mode from the **Display** settings screen.

Language

Your device supports Chinese, English, German, Japanese, and Korean language displays. See [Changing the Device Language](#) for information on changing the device interface language. The user guide is available in Chinese and English. See [How to Use this Guide](#).

Connecting to Wi-Fi

Basic connectivity to Wi-Fi is handled by the Wi-Fi Management Port (configured in the system network settings). The [Wi-Fi Management Port](#) is separate from the Wi-Fi test port. It can access the internet, be used by other system applications, upload test results to the Link-Live web site, and be used for remote control. The management port also provides a more stable network connection than the test port, which can change connections during AutoTests or be disconnected during Wi-Fi scanning. See [Test and Management Ports](#) for more information.

NOTE: NetAlly testing apps use the Wi-Fi Test Ports and Wi-Fi AutoTest Profiles to connect to Wi-Fi networks during testing. See [Test and Management Ports](#) for more information.

NOTE: The AirCheck G3 can also support a wired Ethernet port if you use a supported external USB-to-Ethernet adapter, which you must purchase separately. See [USB Wired Management Port](#) for more

information.

To connect your AirCheck G3 to a Wi-Fi network:

1. Open the system Wi-Fi Device Settings using either method below:
 - Open the device Wi-Fi settings from the main [Device Settings](#) screen by tapping the Settings icon  and selecting **Network & Internet > Wi-Fi**.

- Open device Wi-Fi settings from the [Quick Settings panel](#) by dragging down the top Status Bar and tapping and holding (long pressing) the Wi-Fi icon.

Either method opens the Wi-Fi settings screen:

2. Ensure the Wi-Fi feature is **On**.
3. Tap an available Wi-Fi network in the list.
4. Enter the network's security credentials. (Most networks only require a password, but depending on the security settings, some may also require a company username, EAP type, authentication type, certificate, or

other credentials.)

5. Tap **CONNECT**.

The network you selected moves to the top of the list, and your connection status is displayed below its name in device and quick settings.

The Status Bar displays the Wi-Fi status icon  at the top right of the screen.

Captive Portals

When you try to connect to a network with a Captive Portal requirement, this system notification icon  appears in the top [Status Bar](#). Drag down from the top of the screen to open the notification.

 Tester System ▾

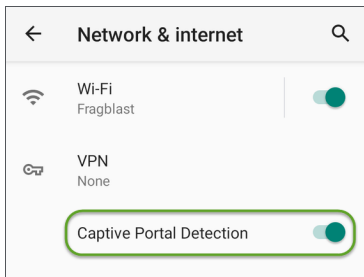

Sign in to network

00:c0:17:53:01:23

Tap the notification to open a web browser window where you can enter the required information for the captive portal. When finished, you can access the internet through the connected network.

If you are trying to connect to a network with a captive portal, but the system notification is not appearing, check that the **Captive Portal Detection** setting is enabled in [Device Settings](#)

 > **Network & Internet**.

Configuring for Enterprise Security

Enterprise security requirements for WPA/WPA2/WPA3 Enterprise now require a CA certificate file to be imported to your tester. Some EAP types also require a client certificate and key. This procedure assumes that you are trying to connect to an AP using WPA2-E with PEAP.

- [Before You Begin](#)
- [Import the Certificate Authority File](#)
- [Test Wi-Fi Management Using WPA2-E with PEAP](#)
- [Import the Client Certificate](#)

Before You Begin

You may depend on your IT department to provide authorization certificates, which may be created by a Trusted Root Authority like VeriSign or DigiCert. If so, contact your IT department for the certificate resources. You will need:

- CA certificate in .pem format
- Clients:certificates in .p12 format with private key (EAP TLS only)
- Common name, domain name, username, and password for the server you to which you want to connect.

If you have the ability to generate your own self-signed certificates, such as a FreeRADIUS server, you can create these resources as needed. This procedure uses examples generated by a

FreeRADIUS server as a certificate source, although other sources are available.

Import the Certificate Authority File

1. Copy the self-signed Certificate Authority (CA) file (in .pem format) onto a USB thumb drive.
2. Transfer the USB thumb drive to your AirCheck G3, and then copy the .pem file to the **Downloads** folder.
3. Open the Settings app.
4. Navigate to **Security > Encryption & credentials > Install a certificate > Wi-Fi certificate**. This opens the file picker.
5. Navigate to the Downloads folder, and select the .pem file that contains your CA certificate.
6. Rename this certificate (for example, **CA FreeRadius self-signed**). A message confirms that the Wi-Fi certificate has been installed.

7. (Optional) Verify the CA certificate installed correctly:
 - a. Tap the system **BACK** button to return to Encryption & credentials.
 - b. Tap **User credentials**.
 - c. Verify that the name of your CA file (for example, **CA FreeRadius self-signed**) is displayed.
8. If you are creating your own certificate:
 - a. Verify the common name for the enterprise server. For example, using a FreeRADIUS server, create a common name of Example Server Certificate by entering:

```
sudo -s  
  
cd /etc/freeradius/certs  
  
openssl x509 -in server.pem  
-text | grep Subject |  
grep CN
```

Output:

```
Subject: C=FR, ST=Radius,
O=Example Inc., CN=Example
Server Certificate emailAd-
dress=
admin@example.org
```

- b. On the same server, create a user login to access the enterprise server. For example, with a FreeRADIUS server, you would edit `/etc/freeradius/users`, locate the section for "# The canonical testing user", and then create the new user by inserting 2 lines:

```
entuser1 Cleartext-Password
:= "randompw"
Reply-Message := "Hello, %
{User-Name}"
```

This creates a user login called **entuser1** with a password of **randompw**.

Test Wi-Fi Management Using WPA2-E with PEAP

1. Open the Settings app on your unit and navigate to **Network & internet**.

2. Toggle the Wi-Fi button to On/Enabled.
3. Tap **Wi-Fi** to view available networks.
4. Scroll down to and then select the SSID of the enterprise server you wish to connect to using WPA2-E (for example, **TEST-Ruckus-WPA2-E**).
5. Configure the following WPA2-E options in the pop-up dialog:
 - EAP method: **PEAP**
 - Phase 2 authentication: **MSCHAPV2**
 - CA certificate: (use whatever name you chose for your CA certificate, for example, **CA FreeRadius self-signed**)
 - Online Certificate Status: **Do not validate**
 - Domain: (enter the Common Name recorded above, for example, **Example Server Certificate**)
 - Identity: (enter whatever test user name was set up for the server, for example, **entuser1**)

- Anonymous identity: (leave blank)
 - Password: (enter the password set up for the server)
6. Tap the **CONNECT** button to apply settings and close the configuration page.
 7. Verify that the test SSID appears at the top of the list with a status of Connected.

Import the Client Certificate

NOTE: Applies to EAP TLS only.

1. Obtain a client certificate in .p12 format. Be sure it includes the private key.

NOTE: Although the imported CA certificate is a .pem file, NetAlly recommends a .p12 file format for the client certificate. Below is a sample openssl command to convert a client certificate from .pem to .p12 format:

```
<path_to_openssl_bin>\openssl.exe  
pkcs12 -legacy -provider-path  
<openssl_path>/providers -export  
-inkey <privateKey>.key  
-in <client_cert>.pem  
-out <client_cert>.p12
```

2. Rename the certificate file, for example, **client.p12**.
3. Copy the .p12 file to a USB thumb drive.
4. Transfer the USB thumb drive to your AirCheck G3, and then copy the .p12 file to the **Downloads** folder.
5. Open the Settings app.
6. Navigate to **Security > Encryption & credentials > Install a certificate > Wi-Fi certificate**. This opens the file picker.
7. Navigate to the **Downloads** folder, and select the .p12 file that contains your client certificate (for example, **client.p12**). A message prompts you to enter the password.
8. Enter the client certificate password to extract the certificate.
9. Rename the certificate, for example, **FreeRadius client**. A message confirms that the Wi-Fi certificate has been installed.

10. (Optional) Verify the client certificate installed correctly:
 - a. Tap the system **BACK** button to return to Encryption & credentials.
 - b. Tap **User credentials**.
 - c. Verify that the name of your client certificate file (for example, **FreeRadius client**) is displayed.
11. Press the system **BACK** button to return to Encryption & credentials. You can now securely connect to your enterprise server.

Sharing

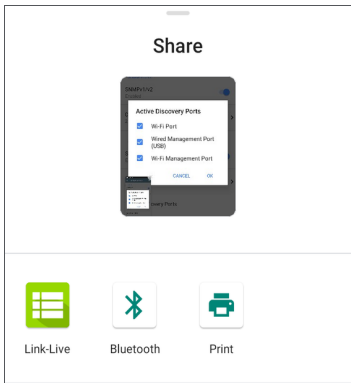

The system [Files](#)  app lets you share files from internal or external storage to Bluetooth, a printer, or the Link-Live cloud service. You can upload one selected file or multiple files at once.

NOTE: Many apps on your unit allow you to save settings and configuration information directly to Link-Live. See [Saving App Settings and Configurations](#).

1. On the Home Screen, open the Files app by tapping the icon .
2. Navigate to the folder containing the files you want to share using the Navigation menu  or the [left-side navigation drawer](#).
3. Long-press on one or multiple files to select.

4. Tap the  share icon in the top toolbar to open the Share pop-up dialog.

5. Tap to choose a sharing method and follow the system prompts to share the file or files.
6. (Optional) If uploading to [Link-Live](#):

- a. Tap the  **Link-Live** option.

**Link-Live**
by NetAlly

File Name

Comment

Job Comment

 **SAVE TO LAST TEST RESULT**

 **SAVE TO UPLOADED FILES**

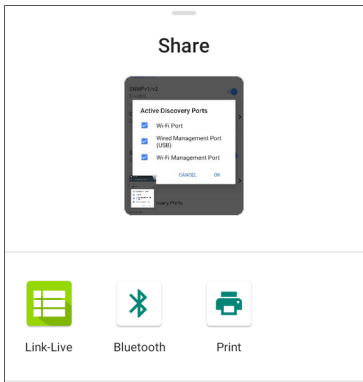

- b. Enter any **Comments** you would like attached to your file.

- c. Select **SAVE TO LAST TEST RESULT** or **SAVE TO UPLOADED FILES**. Your files are then uploaded and viewable on Link-Live.com. (The **SAVE TO LAST TEST RESULT** option attaches the image to your most recently run AutoTest or iPerf results on Link-Live.com.)
- d. See the [Link-Live](#) chapter for more information on using Link-Live with your AirCheck G3.

Sharing a Screenshot

To take and share a screenshot, press and hold the **Power** button and the **Volume Down** button at the same time for one second. (See [Buttons and Ports](#) for button locations). The unit beeps and displays a thumbnail version of the screen shot with two menu buttons: Share and Edit.

- To share the screenshot immediately, tap **Share**. This opens the Share pop-up dialog. Follow the [Sharing procedure](#) to share the image using Link-Live, Bluetooth, or another configured application.

- To edit the screenshot, tap **Edit**. This opens the system editing tool. Manipulate the image (crop, rotate, filter, draw, etc.), and then tap **Save** to save the changes. You can then follow the [Sharing procedure](#) to share the image using Link-Live, Bluetooth, or another configured application.

Changing the Device Language

The AirCheck G3 supports Chinese, English, German, Japanese, and Korean language displays.

To change the device's interface language:

1. Go to the [Device Settings](#) screen by tapping the Settings  icon at the bottom of the Home screen.
2. Scroll to and select **System**.
3. Select **Languages & input** and then **Languages**. This displays the Language preferences screen.
4. On the Language preferences screen, select **+ Add a language**.
5. Tap the language option you want. This returns you to the Language preferences screen.
6. Touch and hold the icon  to the right of the language, and then drag the language to

the top (number 1) place on the list.

The AirCheck G3 displays the chosen languages, as available, in the priority order shown on the Language preferences screen.

NOTE: This user guide supports Chinese and English. If you choose German, Japanese, or Korean as the device language, the system uses the English user guide. See [How to Use this Guide](#) for more information about the user guide.

NOTE: Manuals are also available for web download at: <https://www.net-ally.com/support/user-guides/>

AirCheck G3 Settings and Tools

The AirCheck G3 features a common set of tools and [General Settings](#) that apply to multiple NetAlly apps and testing behaviors. This chapter covers settings, icons, and notifications *specific to AirCheck G3*.

(See the [Device Settings](#) topic for information on the system settings.)

Access common settings and informational screens for the NetAlly testing apps (like AutoTest or Capture) by opening the left-side Navigation Drawers  or Settings .

Navigation Drawer

Many system apps, including the NetAlly test apps, contain additional settings, tools, and information in a "navigation drawer" that slides out from the left side of the screen.

To open the navigation drawer:

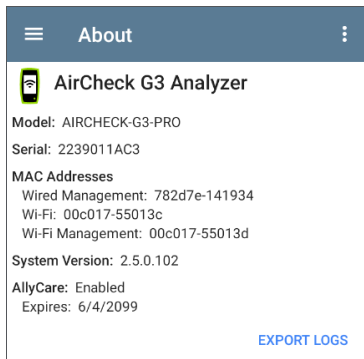

- Tap the menu icon  at the top left of one of the testing application screens.
- Touch and drag (swipe) to the right from the very left side of the app screens.

As an example, the AutoTest navigation drawer (above) provides access to the enabled [AutoTest profiles](#), AutoTest Settings, [General Settings](#), and the About screen.

Settings for each specific app are described in the chapter for the app.

About Screen

The About screen displays the model number, serial number, MAC addresses, software versions, SFP details, and current AllyCare contract status for your AirCheck G3.

You can enable a **User-Defined MAC** in the application [General Settings](#) or in the [Wi-Fi](#) profile settings. (**User-defined**) then appears next to the MAC address on the About screen and in relevant test screens.

Exporting Logs

The About screen contains the Export Logs function, which allows you to save your unit's logs for analysis by NetAlly's customer support team.

Tap the **EXPORT LOGS** link to download a .tgz file to the Downloads folder on your unit. Open the [Files](#) app to transfer the file using email or another method. (See [Managing Files](#).)

Import/Export for All Apps

Tap the action overflow icon  on the About Screen to display a menu for importing or exporting of settings for *all* applications that allow import/export. See [Import/Export Settings](#) for details.

Restarting the Test Unit

To restart your test unit, tap the action overflow icon  on the About Screen and select the **Restart Tester** option.) (This functions the same as holding down the power button and then tapping the **Restart Tester** option.)

Test and Management Ports

The AirCheck G3 has two USB Type A ports; a single USB Type C port for charging and On-the-Go; and two Wi-Fi radio ports.

The Wi-Fi ports give the AirCheck G3 two network interfaces: 1) Wireless Test and 2) Wireless Management.

See the sections below for more information on the ports. Also see [Buttons and Ports](#) and the technical [Specifications](#) as needed.

Test Ports

Wi-Fi Test Port: The internal Wi-Fi test adapter is a 2x2 Tri-band 802.11ax wireless radio. (To disable, see [General Settings](#) in the testing apps' left-side [navigation drawer](#).)

AirCheck G3 runs Wi-Fi AutoTests, Captures, Discovery, and other comprehensive network analysis apps over the test . The Wi-Fi test radio is primarily controlled by the settings in applications, especially AutoTest.

You can use the [AutoTest](#) app to set up and run an [AutoTest Wi-Fi Profile](#) to establish a link on the Wi-Fi test port. (By default, the AirCheck G3 starts in the Wi-Fi App passive scanning mode).

Note that the [General Settings](#) affect how you can use the test port. (The General Settings are accessible from the left-side [navigation drawer](#) from most NetAlly testing apps.)

The **Use Wi-Fi test port** option must be enabled for the test port to function. (Enabled is the default setting.)

NetAlly also recommends that you enable all Wi-Fi Bands and Channels before setting up Wi-Fi Test Profiles:

1. Tap the **Wi-Fi Bands and Channels** option to open the Wi-Fi Bands and Channels screen.
2. Tap the Wi-Fi band(s) option to open a selection screen, and then enable all available bands.
3. Tap the option for each frequency band to open a selection screen, and then enable all available channels for each band.

This process makes it easier to set up the Wi-Fi Test Profiles, which you can limit to specific channels, APs, SSIDs, etc. See [AutoTest Wi-Fi Profile](#) for more information.

See [General Settings](#) for more information about all General Settings options.

Management Port

 **Wi-Fi Management Port:** The internal Wi-Fi management port runs on the main system's 1x1 Dual-band 802.11ac + Bluetooth 5.0 wireless adapter, which is configured in the system Device Settings. See [Connecting to Wi-Fi](#) to configure this connection.

The Wi-Fi management radio is set up by the system network settings. The radio provides full Internet access and a more stable network connection than the Test Port, which may frequently drop links and reconnect or resume scanning.

AirCheck G3 can run Discovery, Ping/TCP Connect tests, Path Analysis, and iPerf tests on the management port, but not AutoTests or packet captures.

USB Wired Management Port: You can use a USB-to-Ethernet adapter to run an alternative wired management port for your AirCheck G3. This option allows you to set up a stable wired connection for [system updates](#), [updating software](#), communicating with [Link-Live](#), AP uplinks, and for running basic wired tests that can help diagnose problems that may affect Wi-Fi devices.

NOTE: NetAlly has tested many but not all USB-to-Ethernet adapters for compliance with the AirCheck G3. The following adapters are supported:

- j5create model JUE130 (USB 3.0)
- StarTech.com model USB21000S

For additional information, see [Ethernet Adapters and Cameras](#).

Contact [NetAlly support](#) for more details if needed.

To set up the adapter interface:

1. Plug the adapter into one of the USB Type A ports on your device.
2. Connect the adapter to a network RJ-45 cable.
3. Verify that the LEDs on the adapter are on. This indicates that the connection is active.
4. Verify that the USB Wired Management Port is now listed as a management port in the [Test and Port Status Notifications](#).

You can now use the USB Wired Interface in the following applications:

- Discovery (Active Discovery Ports and TCP Port Scan)
- Ping

- Path Analysis

See [Selecting Ports](#) below for more information.

Selecting Ports

Some of the individual NetAlly testing apps let you select which port interface to use for tests or analysis.

- You may want to verify that you are getting a reliable connection to the Internet and the Link-Live cloud service while you are actively using the Wi-Fi Test port to perform an AirMapper survey. To check connectivity, you can configure the Ping/TCP app to use the Wi-Fi Management port to run a continuous background ping to the Internet.
- Each port can connect to different networks. For example, an organization might have one network for visitors and another for staff. You can use the management and the test port to check connectivity on each network without the need to link and relink through a single interface.

To change the port, tap an app's settings icon  to display the settings screen. Then tap **Interface** to select the port from a dialog.

- The top Wi-Fi Port refers to the test port.
- The Wired Management Port (USB) option refers to the [optional USB-to-Ethernet interface](#) for the management port.
- An AutoTest [Wi-Fi Profile](#) must run to establish test port links.
- The last listed Wi-Fi Profile runs automatically when a Wi-Fi connection is available.

Test and Port Status Notifications

AirCheck G3 shows notifications from the NetAlly testing apps and unit ports in the top Status Bar and [Notification Panel](#). Swipe down on the Status Bar to view the notifications.

On each notification, you can tap the title and down arrow to expand the box and view more details or options.

Various AirCheck G3 icons appear in your Status Bar, as listed in the following sections.

NOTE: Read [Test and Management Ports](#) for descriptions of the port functions.

See [General Settings](#) for settings that control port functions.

Test Port Notifications

Active network connections on the test ports are established using the [AutoTest](#) app.

 or  The **Wi-Fi Test Port** status displays with the wireless channel number under a Wi-Fi or Link icon. Channels in the 6 GHz band display with an E by the Wi-Fi or Link icon.

 When the AirCheck G3 unit is dwelling on a Wi-Fi channel (in this case channel 64), the channel number is static. When the AirCheck G3 is scanning for discovery, Wi-Fi analysis, or air quality measurements, the channel number changes dynamically to show which channel is currently being scanned.

 **Periodic AutoTest** is running or has completed. When [Periodic AutoTest](#) is running, the Wi-Fi Test Port may not be available to other testing apps.

 AutoTest ^
Periodic AutoTest Running

Passed: 3

Failed: 2

Skipped: 1

Time Remaining: 54 m

Management Port Notifications

You can establish a **Management Port** connection using the device's system Wi-Fi radio or an optional USB-to-Wi-Fi adapter.

 NetAlly ^
Multiple Management Port Connections

Wi-Fi Management Port

IP Address: 192.65.49.83

SSID: NSVisitor

Channel: 52

The alternative **Wired Management Port** connection can be established through the optional USB-to-Ethernet interface. Its details are displayed under the system Management Port notifications. See [USB Wired Management Port](#) for more information.

A **Wi-Fi Management Port** connection can be established via the main system Wi-Fi adapter. Its details are displayed under the Management Port notifications.

If your Management connection is lost, the following notification displays.

now

No Management Port Connection

Discovery Notifications

The Discovery notifications show the progress of the discovery process. See the [Discovery](#) app chapter for more information.

The active discovery process is running and has progressed to the specified percentage.

No links are currently available for active discovery, either because none of the ports enabled for discovery are connected or AutoTest is running. Discovery is temporarily disabled when AutoTest is running.

VNC/Link-Live Remote

A remote VNC connection is active through a standalone VNC client and/or the Remote function in [Link-Live Cloud Service](#).

AirCheck G3 General Settings

AirCheck G3's General Settings control test and management-related connections that affect multiple test apps.

NOTE: Access the **General Settings** from the **left-side navigation drawer**  in the NetAlly testing apps, such as AutoTest, Discovery, Capture, iPerf, etc.

See also [Test and Management Ports](#) and [Test and Port Status Notifications](#) for related information on port functionality and status icons.

Wi-Fi General Settings

The Wi-Fi General Settings control functions of the [Wi-Fi Test Port](#).

Use Wi-Fi test port: Enable or disable Wi-Fi tests, connections, and measurements in the testing

apps, including [AutoTest Wi-Fi Profiles](#) and the [Wi-Fi](#) analysis app.

NOTE: This setting does not disable the main system device Wi-Fi function, which controls the Wi-Fi Management port connection. See [Device Settings](#) to disable the system Wi-Fi.

Country: Set the country code for your tester. This setting controls which channels can be scanned and which channels are reported as illegal or which may have Dynamic Frequency Selection (DFS).

Wi-Fi Bands and Channels: Select the wireless frequency bands and channels the tester scans for devices and measurements such as utilization.

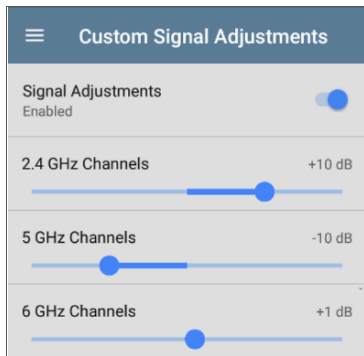

Tap each band or channel setting to open a selection dialog.

- Unchecking a Wi-Fi Band prevents any linking to, or scanning of, channels in that band.

- Unchecking a Channel means the channel still links but does not get scanned.
- Channel changes affect these apps: Air Quality scans, Wi-Fi results (scanning), Discovery, AirMapper (passive surveys)
- Channel changes do *not* affect these apps: AutoTest results (linking), Wi-Fi Capture, AirMapper (active surveys)
- Tap the **Dwell Time** field to adjust the amount of time the AirCheck G3 stays on each channel to gather data.

 Wi-Fi Bands and Channels
Wi-Fi Band(s) 2.4 GHz, 5 GHz, 6 GHz
2.4 GHz Channels All
5 GHz Channels All
6 GHz Channels All
Dwell Time 210 ms

Custom Signal Adjustments: Tap this setting and then tap the **Signal Adjustments** toggle to open an adjustment panel for each frequency band. You can adjust the signal strength for each band from -20 dB to +20 dB.

User-Defined MAC: This setting affects the [Wi-Fi Test Port](#) only.

1. Tap the toggle field to enable a user-defined MAC for the AirCheck G3. This displays the current user-defined MAC definition. (If you have not previously provided a definition, the field shows the factory default MAC address.)

2. To enter a new definition, tap the User-Defined MAC definition field, enter a new definition, and then tap **OK**. When enabled, **(User-defined)** appears next to the MAC address on the [About](#) screen and on relevant test result screens.

NOTE: This definition can be overridden by a profile-based user-defined MAC. See [Wi-Fi Profile Settings](#) for more information.

Management

These settings affect management-related functions on the AirCheck G3, including remote access.

VNC

Tap **VNC** to open the VNC settings screen and configure your tester's VNC connections for remote operation.

See [Using VNC](#) for more information about connecting to a VNC client or Link-Live Remote.

VNC	
Allow VNC Connections	<input checked="" type="checkbox"/>
Enabled	
Port number	5900 (rfb)
Password	
Web viewer	<input checked="" type="checkbox"/>
Enabled	
Web viewer port	5800

Allow VNC Connections: (Disabled by default.) Tap the toggle button to enable remote connections from VNC clients and display VNC options.

Port number: Tap to enter a port number other than the default.

Password: Tap to enter a password, which a VNC user must enter to access the AirCheck G3 interface remotely.

NOTE: If you set a **Password** here in the **VNC** settings, the password is required to connect to both a standalone VNC client and the Remote feature at Link-Live.com.

Web viewer: Tap the toggle to enable or disable web viewer access.

Web viewer port: Tap to enter a port number other than the default.

Link-Live Remote

This setting enables or disables the AirCheck G3's remote control function in [Link-Live Cloud Service](#) at [Link-Live.com](#).

NOTE: The Link-Live Remote feature is only available to customers with an active **AllyCare** subscription. Your AirCheck G3 must be [claimed](#). See [NetAlly.com/Support](#) for more information.

Access the Remote function on the **Units**  page at Link-Live.com by selecting the claimed AirCheck G3.

Preferences

Distance Unit: This is the unit AirCheck G3 uses for distance measurements in the testing apps, specifically [AirMapper](#). Tap the field to switch between Feet and Meters.

Save Locally Only: Tap this toggle field to change your tester's default behavior for saving files. (The default is to give you the option to save to [Link-Live](#) or locally.)

Technical Product Support

Enhanced Logging: Enabling this setting allows your device to gather advanced logging details in order for NetAlly's customer support team to assist with using our products. Only enable this setting if you are directed to by our team.

Trending Graphs

Many of the AirCheck G3 testing apps feature time-based line graphs of recorded measurements, which you can pan and zoom to view different time intervals. For example, the image below shows the Signal and Utilization graphs from the [AutoTest Wi-Fi Link Screen](#).

The graphs update in real time and then save and display data for up to 24 hours (depending on test type and/or link status).

A legend indicates the measurements that correspond to each plotted color.

For another example, the image below shows the **Capture** app graph.

- To pan, or move backward and forward in time, touch and drag (swipe) left and right on each graph.
- To zoom in on a specific point, double tap the point on the graph. The view zooms in 2x (or displays half the amount of time) for each double tap.
- To zoom in or out, decreasing or increasing the time interval displayed, drag the slider or tap the slider bar below the graphs.
 - The largest time interval (maximum zoom out) is the total time data has accumulated.
- To reset the graph to the default time interval, tap the zoom reset icon .
- The zoom reset icon appears *after* you zoom or pan on the graph.
- The default time interval varies across different apps.

The following apps and screens contain trending graphs:

- [AutoTest Wi-Fi Profiles – Link and Channel](#)
- [Ping/TCP – Ping Test](#)

- [Capture](#)
- [Discovery – Interface Statistics](#)
- [Wi-Fi – RF and Traffic Statistics](#)

Common Icons

The icons below appear in multiple NetAlly test and system apps.

Menu Icon - opens the left [navigation drawer](#) or other menus

Refresh Icon - restarts testing and measuring on the current screen

Settings Icon - opens configuration options for the current app

Save Icon - saves settings or files or loads saved configurations

Floating Action Button (FAB) - opens the Floating Action Menu, which contains additional actions

Action Overflow Icon - contains additional actions

Directional Arrows (or Carets) - indicate the ability to "drill in," open a screen, or expand a panel for more detailed information, or to change the order of a list

For explanations of the AirCheck G3 icons that appear in the Status Bar at the top of the screen, see [Test and Port Status Notifications](#).

Floating Action Button (FAB) and Menu

Many system applications, including NetAlly's AutoTest and Discovery apps, feature a Floating Action Button or "FAB"  that opens a floating action menu with more options for analysis.

The FAB on the main AutoTest app screen allows you to add a new Wi-Fi or Air Quality Profiles.

The FAB on the Discovery app's Details screen opens other apps for further testing of the selected device.

See the chapter for each app for descriptions of the FABs specific to that app. For example, see [Discovery App Floating Action Menu](#) describes the Discovery FAB in more detail.

Common Tools

Web Browser/Chromium

Some of the testing apps, like AutoTest, Ping/TCP, and Discovery, give you the option to **Browse** to internet addresses using a web browser application. AirCheck G3 has the Chromium browser pre-installed.

Telnet/SSH

The JuiceSSH  application pre-installed. Both the AutoTest and Discovery apps provide links to start a Telnet or SSH session using the current device address. Selecting these options opens JuiceSSH and starts a session. You can also open JuiceSSH from the [Apps](#) screen.

The JuiceSSH app maintains a list of previous connections. When opened from a NetAlly app, JuiceSSH uses the first connection in the list that matches the IPv4 address or device name and type. If no match is found, a new connection entry is created and used.

As a third-party app, JuiceSSH contains its own tutorials. For additional help, tap the action

overflow button  at the top right of the JuiceSSH app screen, and select **View our FAQ**.

External Camera

The AirCheck G3 does not have a built-in camera, but you can use an external USB camera to take pictures to accompany Link-Live data. The pictures can be shared or uploaded to the [Link-Live](#) cloud service with test data. You can also edit or annotate pictures in the Gallery

app. NetAlly has verified that the following cameras work with the app:

- Logitech C270 HD Webcam
- EMEET 1080P Webcam
- NexiGo N660
- Microsoft LifeCam HD-3000

Set Up

To begin using the camera app:

1. Make sure your unit is [claimed to Link-Live](#).
2. Plug your USB camera into either the top or side USB 2.0 Type-A port of your unit.
3. From the home desktop, tap the **App Store** application.
4. Scroll down to the **USB Camera** app from NetAlly.
5. Tap the blue **DOWNLOAD** button. Wait for the download to finishes and the blue button changes to show OPEN.
6. Verify the Download completes and the blue button changes to show OPEN.

7. Tap the **OPEN** button to launch the USB Camera app. The app then prompts you to set several options.
8. When prompted to allow the USB camera to take pictures and record video, select **WHILE USING THE APP**. The app launches and shows a preview image.
9. (Optional) To move the camera app icon to the system home desktop:
 - a. Tap the circular **Home** button at the very bottom of the system screen to view the desktop.
 - b. Swipe up from the bottom of the screen to view all installed applications.
 - c. Find the **USB Camera** icon.
 - d. Press and hold the icon, and then drag it up into the home desktop icons area.

To Share an Image

To share an image to Link-Live:

1. From the system home desktop, launch the **USB Camera** app. The app opens and a live

preview image appears in landscape mode.

2. Point the camera and press the circular **Shutter** button to take a picture. The **Share**  and **Delete**  icons appear on screen.
3. Tap the **Share**  icon to display the [Link-Live sharing screen](#).
4. Enter any a File Name, [comment](#), or [job comment](#) as needed.
5. Tap **SAVE TO LAST TEST RESULT** to attach the image to the last uploaded test result, or tap **SAVE TO UPLOADED FILES** to save the image to your Uploaded Files folder on Link-Live. (You can then view your uploaded files from a PC logged into Link-Live.)

Software Management

This chapter explains how to save and transfer files, reset app and device defaults, update your software, and remotely access your AirCheck G3.

Tap a link below to skip to a topic:

[Managing Files](#)

[Updating Software](#)

[Remote Access](#)

[Resetting App Defaults](#)

[Restoring Factory Defaults](#)

Managing Files

The AirCheck G3 operating system, images, documents, and other files reside in a folder system, where you can copy, move, and paste them between folders or to external storage locations.

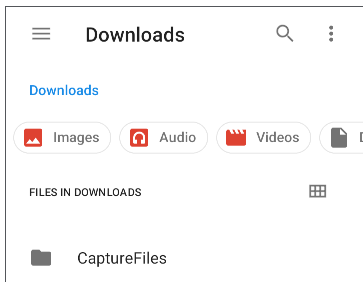

See also [Sharing](#).

Files Application

The Files app allows you to access the files saved on your AirCheck G3. Tap the  icon at the bottom of the Home Screen (or from the [Apps](#) screen) to manage your files.

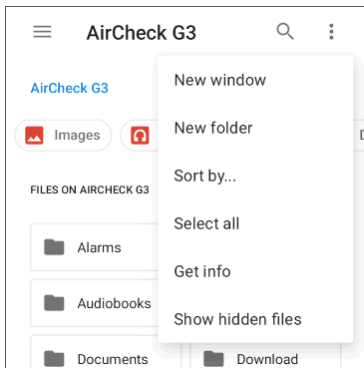

NOTE: To select the device sub-folders in the Files app as shown below, you may need to open the [navigation drawer](#) by swiping from the left side of the screen or by tapping the navigation icon  at the top left and then tapping the **ACKG3** folder.

- Tap a folder or file to open it.
- **Long press** on folders or files to select multiple and to view additional file management operations in the top toolbar, including the **Share**  and Delete buttons.

- Tap the action overflow icon  to see even more actions, such as to create a new folder, move a file, delete an item, and to show or hide the main internal storage folder.

- Open the left-side **navigation drawer** ≡ to easily navigate through the top-level folders and attached storage devices.

How to Move or Copy a File

1. Long press on a file to select it. You can then select more files as needed by tapping them.

2. Tap the overflow icon  at the top right.
3. Select **Copy to...** or **Move to...**. Your selected action button appears at the bottom of the screen.

4. Navigate to the folder where you want to move or copy the file.
5. Tap the **Move** or **Copy** button at the bottom of the screen.

Using a USB Drive

Insert a USB flash drive into the [USB port](#) on the top of the AirCheck G3.

A USB icon  appears in the Status Bar at the top of the screen. Pull down the top **Notification Panel** to reveal the USB drive notification.

 Tester System ▾

Kingston USB drive

For transferring photos and media

Tap the notification title or down arrow to expand the notification and display additional options:

The **USB storage** location is now available from the **Files**  application.

⚠ CAUTION: Use the system **EJECT** function before physically removing your USB drive from

the USB port to avoid potential corruption of your storage device's file system.

Ejecting Storage Media

You can eject storage media from the expanded system notification (as shown above) in the Notification Panel or from the left-side [navigation drawer](#) in the Files app (below).

Using a USB Type-C to USB Cable

1. Plug a USB-C cable into the [USB-C](#) port on the left side of the AirCheck G3, and connect to a PC or tablet.
2. On the AirCheck G3 Unit, open the system device settings by tapping the Settings  icon at the bottom of the [Home screen](#).
3. Select **Connected devices**.

4. On the Connected devices screen, select **USB**.
5. In the pop-up dialog, tap **Transfer files** to enable file transfer.

NOTE: AirCheck G3 does not charge through a USB cable connected to a PC.

6. On a PC or tablet, navigate to the AirCheck G3 folder, and then move, copy, and paste files to and from the AirCheck G3's file system.

⚠ CAUTION: Use the system **EJECT** function before physically disconnecting the USB cable from your PC or AirCheck G3 to avoid potential corruption of your storage device's file system. See [Ejecting Storage Media](#) above.

Updating Software

Users with an active **AllyCare** subscription can download regular software updates. Visit our AllyCare site for more information:

[Netally.com/allycare-support/](https://netally.com/allycare-support/)

Your AirCheck G3 accesses software updates from the Link-Live Cloud Service "Over-the-Air" (OTA). However, you can also manually download and install updates if you do not want to claim your unit to Link-Live. See [Manual Updates](#) below.

Over-the-Air Updates

For an OTA update, you must create an account and "claim" your AirCheck G3 unit at [Link-Live.com](https://link-live.com). Then your AirCheck G3 can find and download software updates. See [Getting Started in Link-Live](#).

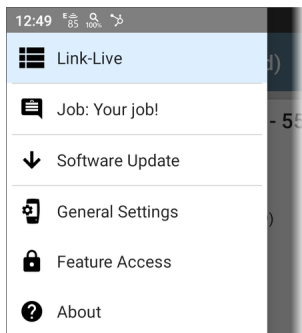

The first time you claim your AirCheck G3 to Link-Live, a software update may be available. If so, an update icon  appears in the Status Bar. Slide down the [Top Notification Panel](#), and then select the notification to update your unit.

↓ Link-Live

Software Update Notification

Software update available.

1. To check for available software updates at any time, open the [Link-Live App](#)  from the [Home screen](#).
2. In the Link-Live App, tap the menu icon  or swipe right to open the left-side [navigation drawer](#).

3. Tap **Software Update**. The Software Update screen opens and displays the version number of any available updates.

4. Tap **Download + Install** (or **Download + Reinstall**) to update the operating system and NetAlly applications. The update downloads and installs automatically. When finished, the unit restarts.
5. After updating, check the Software Update screen again in case another update is still required.

Manual Updates

You can get update files by contacting NetAlly's customer Support at NetAlly.com/Support or by downloading them from Link-Live.com as follows:

1. Log in to the Link-Live web site.
2. Open the left-side [navigation drawer](#) by clicking the menu icon , and then select **Support > Software Downloads**.
3. Locate and select the update file for your unit. The file name is in the format: **<product name abbreviation>-ota-user.zip**.
4. Save the update file to a PC.

Updating the System Software

Reference [Buttons and Ports](#) if needed.

1. From your PC, copy the .zip file to a FAT32-formatted Type A **USB drive**, and then insert the drive into your AirCheck G3.
2. Power off your AirCheck G3 unit.
3. Press and hold the **Volume Up** button, and then press the **Power** button. Continue to hold the **Volume Up** button until the Recovery screen appears. (You can release the **Volume Up** button a few seconds after this screen appears.)

4. In Recovery Mode, use the volume buttons to highlight **apply update from USB drive**.
5. Press the **Power** button to confirm the selection.
6. Use the volume buttons to highlight the correct update file on the USB drive.
7. Press the **Power** button to confirm. The AirCheck G3 opens the Updater, installs the update, and then restarts with the update installed. This process can take 5 to 10 minutes. When complete, the message 'Install from USB drive completed with status 0.' should show on the install line.
8. Use the volume keys and **Power** button to select **reboot system now**. Your unit should boot normally.

Remote Access

AirCheck G3 supports remote access and control using either a standalone VNC client or the Link-Live Remote feature, which uses a VNC client through the Link-Live website.

NOTE: The Link-Live Remote feature is only available to customers with an active **AllyCare** subscription. Your AirCheck G3 must be [claimed](#).

Visit [Netally.com/allycare-support/](https://netally.com/allycare-support/) for more information.

You can establish remote connections using the Wi-Fi Test Port. However, the Management Port provides a more stable link for remote control because the test port may disconnect and reconnect frequently.

See [Test and Management Ports](#).

The top [notifications](#) are the quickest way to find assigned IP addresses for your AirCheck G3 ports. Swipe down from the [Status Bar](#) to view them.

 NetAlly ^**Multiple Management Port Connections**

Wi-Fi Management Port

IP Address: 192.65.49.83

SSID: NSVisitor

Channel: 52

For a Wi-Fi Management Port connection, you must have the main [System Wi-Fi settings](#) configured to connect to a wireless network.

When a remote session is active, the remote icon  appears in the top Status bar, along with a notification.

 NetAlly ^**Remote Connected**

Clients

172.24.0.219

Link-Live Remote: Angela Tech Writer

NOTE: If you have screen lock settings enabled on your tester, when operating your tester device from a PC, you can lock and unlock the unit you are controlling remotely using the **F1** and **F2** keys on a keyboard. Move the mouse into your remote tester window and press **F1** to lock.

When the lock screen is displayed, move the mouse into the window and press **F2** to unlock.

Using VNC

Remotely access the AirCheck G3 using a peer-to-peer VNC client installed on a PC or other machine.

See [General Settings > VNC](#) to enable and configure VNC connections.

To connect to AirCheck G3 using a VNC client:

1. Get the IP address of a connected port (preferably a management port) by swiping down from the Status Bar at the top of the screen to view the [notification panel](#).
2. Provide the Wi-Fi Test or Management Port's IP address to your chosen VNC client application.
3. Connect using your VNC client.
4. If needed, enter the password that is set in the [VNC settings](#).

Using Link-Live Remote

The Link-Live Remote feature uses end-to-end encryption, allowing secure remote control of your AirCheck G3.

On your AirCheck G3, go to [General Settings > Link-Live Remote](#) to ensure the feature is enabled.

NOTE: If a Password is enabled in the [VNC General Settings](#), you must also enter the same password to access the Remote feature in Link-Live.

1. If you have AllyCare, sign in to Link-Live.com to access the Link-Live Remote feature. Your AirCheck G3 must be [claimed](#).
2. Navigate to the **Units**  page at Link-Live.com.
3. Select the AirCheck G3 you want to remote control from the list of claimed units.
4. Click or tap the **REMOTE** icon  at the top right of the page to open an embedded window containing the AirCheck G3 interface.

5. If necessary, at the top of the window, enter the Password set in **General Settings > Management > VNC** on the AirCheck G3 unit.

To use the Link-Live website while your remote session is active, you must open a new Link-Live tab or window.

Managing NetAlly App Settings

This topic explains how to reset, [load](#), [save](#), [import](#), and [export](#) the test settings for NetAlly testing apps.

For instructions on restoring factory defaults to the entire test unit, see [Restoring AirCheck G3 Factory Defaults](#).

Resetting Testing App Defaults

After you adjust settings in the NetAlly apps, you may need to reset an app's settings to the defaults. The following process resets all app-specific settings to the factory defaults.

 **CAUTION:** This operation deletes all saved settings, including testing profiles and other application data.

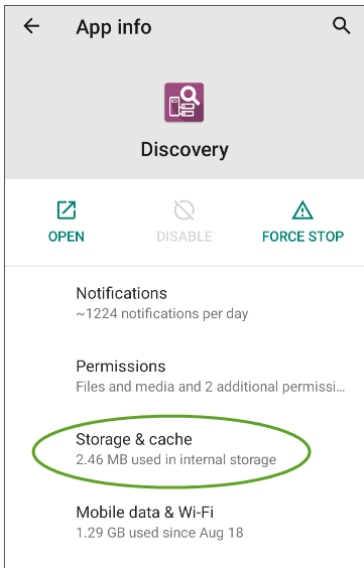

The Discovery app is used as an example in the following steps:

1. Access the **App Info** screen by long pressing (touch and hold) on an app's icon on the

Home or Apps screen.

2. Tap App info.

- On the App info screen, select **Storage & cache**.
(You can also access the App Storage screen from [Device Settings](#))

 > Storage > Internal shared storage > Other apps.)

4. On the Storage screen for the app you selected, tap **CLEAR STORAGE**.

5. When a dialog prompts you to delete the data, tap **OK**.

All of the app's settings are reset to factory defaults.

Saving App Settings and Configurations

Many of the NetAlly testing applications allow you to save and reload configured settings by selecting the save button  that appears at the top right within the app's main screen.

The following apps allow you to save and load settings configurations:

- [AutoTest, including Profile Groups](#)
- [Discovery](#)
- [Discovery Problem Settings](#)
- [iPerf](#)
- [Spectrum](#)

The iPerf app is shown below as an example.

The following options display in a drop-down menu:

- **Load:** Open a previously saved and named settings configuration.

- **Save As:** Save the current settings with an existing name, or enter a new custom name.

Save iPerf Settings

Conference Room

Server Room

iPerf Defaults

Server Room

CANCEL SAVE

- **Import:** Import a previously exported settings file.
- **Export:** Create an export file of the current settings, and save it to internal or connected external storage.
- **Export To Link-Live:** Export the current settings directly to the [Link-Live](#) cloud service.

See [Exporting/Importing App Settings](#) (below) for more details.

Saving a Default Test App Configuration

If you find you are frequently resetting app defaults, you can save  the default configuration of settings for later use within the NetAlly testing apps. Loading a saved default configuration within an app allows you to access the default settings without deleting other configurations. This strategy can be most useful for [Discovery Settings](#) and [Problem Settings](#).

1. Go to an app's settings  screen.
2. With all settings set to the defaults, tap the save button  and **Save As**.
3. Save a default configuration with an obvious name like "Default Profiles" or "Discovery Defaults."
4. Do not change the settings in your default configuration to non-defaults without also saving a new, custom-named configuration.

Import/Export Settings

AirCheck G3 provides functionality for importing and exporting saved test app settings for transfer to additional units, Link-Live, USB storage, or to other devices.

NOTE: You can import and export settings only between the same kind of NetAlly products. For example, both units must be AirCheck G3s for a transfer to work.

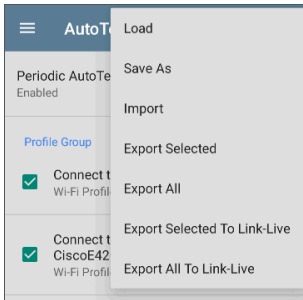

The following apps enable you to import and export settings and configurations:

- [AutoTest Settings, including Profile Groups](#)
- [Discovery Settings](#)
- [Discovery > Problem Settings](#)
- [iPerf Settings](#)

The AutoTest Settings are shown as an example in the images below.

- Tap the save button  to import new app settings or export the *currently active and selected* app settings.

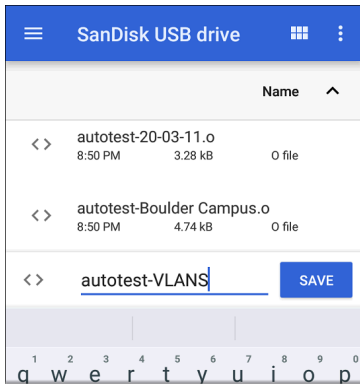

- Selected (checked) items in shared lists of configurations are the only ones exported when you choose **Export Selected**. This can include any checked items in submenus (such as AutoTest Test Targets or Community Strings in [Discovery Settings](#)). You can also select **Export All** to export all selected and unselected items.
- Unsaved configurations without a custom name are auto-named with the app name and date:

A screenshot of a configuration save dialog. It features a text input field with a light blue background and a blue underline, containing the text "autotest-20-03-11". To the left of the input field is a small icon consisting of two chevrons, "< >". To the right of the input field is a blue rectangular button with the word "SAVE" in white capital letters. The entire dialog is enclosed in a thin black border.

< > autotest-20-03-11 **SAVE**

- Saved configurations are auto-named with the app name and custom settings name:

- You can rename the export file as needed.
- Settings can be saved to any connected external or internal storage. See [Managing Files](#) for instructions on accessing folders and moving files.
- Settings are saved with the .o file extension.

SanDisk USB...			
Name ^			
< >	autotest-Boulder Campus.o	8:50 PM	4.74 kB
			0 file
< >	autotest-VLANS.o	8:53 PM	4.74 kB
			0 file
< >	iperf-Server Room.o	8:46 PM	234 B
			0 file
< >	lrpt-Ally Office Network.o	9:27 PM	1.41 kB
			0 file

- Selecting **Import** from an app opens the [Files](#) app, where you can navigate to and select the .o file you want to import.
- Imported settings configurations overwrite existing saved configurations with the same name that are already in the app.

Transferring AutoTest Settings to Other Devices Using Link-Live

You can use the Link-Live cloud service to transfer AutoTest settings with other AirCheck

G3 devices.

- Do some setup before you begin.
- Export the settings file(s) that you want to share to Link-Live.
- Use Link-Live to select other devices to which you want to transfer the settings.
- Use each selected unit to import the settings.

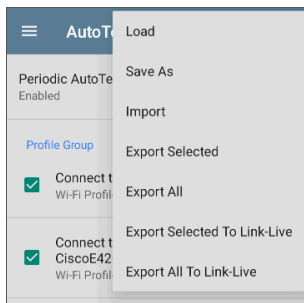

Before You Begin

- Make sure that you have access to the following:
 - a. The device from which you will get the settings
 - b. A PC-based browser
 - c. The devices to which you will transfer the settings file
- Make sure that you have claimed and updated the software for all AirCheck G3 devices to which you want to transfer the settings. (You can use the Link-Live app or web site to do the claiming. See [Claiming the Unit](#) for instructions.)

Export the Settings File(s)

This procedure is done on the device from which you are transferring the settings.

1. In the AutoTest app main page, tap the settings icon  in the top right. This opens the list of profiles.
2. If you plan to export only selected profiles, use the checkboxes to choose those profiles from the list.
3. Tap on the save icon  in the top right to display the save menu options.

4. Tap **Export Selected To Link-Live** (if you selected profiles) or **Export All To Link-Live** on the menu. This opens the save screen for Link-Live.

**Link-Live**
by NetAlly

Settings File Name
autotest-shared settings

Comment
Update for all units

Job Comment
New profiles

 **EXPORT TO LINK-LIVE**

5. (Optional) Edit the file name, add a comment, or add a job comment on the screen.
6. Tap **Export To Link-Live**. This uploads the file to Link-Live.

Use Link-Live to Select Other Devices

This procedure is best performed on a PC-based browser.

1. Use a PC-based browser to log in to the Link-Live web site.
2. Tap the main menu icon .
3. Click on **Settings** to open the settings menu.
4. Select **AirCheck G3** to list the .o settings files available for your devices.
5. Select the settings file you want to transfer.
6. Follow the screen instructions to transfer the file to specific units or to all units that you have claimed.

Use Each Selected Unit to Import the Settings

This procedure is performed on the device to which you want to apply the settings.

1. Wait for up to 30 seconds after the file was pushed from Link-Live.
2. Swipe (touch and drag) downwards from the Status Bar at the very top of the home screen to display the Notification Panel.
3. Locate the notification that says there are new AutoTest settings from Link-Live and lists the profile name.

A screenshot of a notification from the AutoTest application. The notification is white with a thin black border. At the top left, there is a small icon of a checkmark inside a square, followed by the text "AutoTest". Below this, the text "New settings from Link-Live" is displayed in a bold font. At the bottom, the text "autotest-autotest trial.o" is shown.

AutoTest
New settings from Link-Live
autotest-autotest trial.o

4. Tap on that notification to open the AutoTest application.
5. Tap on the save icon  in the top right.
6. Tap on **Import** and navigate to Downloads.

7. Select the downloaded .o file to apply the new profile settings.

Import/Export Settings for All Apps

Your AirCheck G3 supports the importing or exporting of settings for *all* applications that allow import/export of settings.

NOTE: You can import and export settings only between the same kind of NetAlly products. For example, both units must be AirCheck G3s for a transfer to work.

To perform a group export or import:

1. Open the About Screen by tapping the navigation menu icon  in any NetAlly application and then tapping **About**.
2. Tap the action overflow icon  to display the export or import menu.
3. To import settings:

- a. Tap **Import AirCheck G3 Settings**. This opens the [Files](#) app to the default Settings folder.
 - b. (Optional) Use the Files app to navigate to a different folder.
 - c. Select the .nas settings file you want to import.
 - d. Tap **Yes** at the prompt to import the settings for all apps at the next system restart.
4. To export settings:
- a. Tap **Import AirCheck G3 Settings**. This opens a dialog with a system-generated file name and the default Save To folder.
 - b. (Optional) Tap the Save To folder or tap Save As to open the [Files](#) app to select a different folder.
 - c. Tap **Save** to save the settings file.

Resetting AirCheck G3 Factory Defaults

 **CAUTION:** Resetting your device to factory defaults can delete *all* test results, user-installed applications, testing app settings, and saved files.

1. Make sure to [back up any files](#) you wish to keep before resetting.
2. Open the system [Device Settings](#) by tapping the Settings  icon at the bottom of the Home Screen.
3. On the Settings screen, scroll down to and tap on the **System** section.
4. On the System screen, tap **Reset options**.

Reset options

Network, apps, or device can be reset

5. On the Reset options screen, select an option based on the defaults you want to reset. Your AirCheck G3 displays a list of the items that will be reset based on the option

and a confirmation button.

Reset Wi-Fi, mobile & Bluetooth: resets all network settings for Wi-Fi (test and management), mobile data, and Bluetooth.

Reset app preferences: resets any preferences or settings for applications, although app data is not lost.

Erase all data (factory reset):

 **CAUTION:** Erases *all* user data from your tester's internal storage, including: system and app data and settings; downloaded apps; test profiles; credentials; packet information; and screen captures.

6. Tap the confirmation button to begin the reset.
7. Your unit may ask you to confirm again before resetting. If so, tap the final confirmation button to reset your AirCheck G3's defaults. The unit then restarts with the factory default settings you selected.
8. Data on removable drives is not included in the reset. To be thorough, you may also

want to use the [Files application](#) to delete any application settings, preferences, or other data that you have saved on a USB thumb drive. (Do not delete your backup files.)

AirCheck G3 Feature Access

This chapter explains how to semi-permanently control the availability of features on your AirCheck G3.

Tap a link below to skip to your desired topic:

[Introduction to AirCheck G3](#)

[Controlling Feature Availability](#)

[Changing the Admin Password](#)

Introduction to Feature Access

The AirCheck G3 provides the ability to semi-permanently disable certain features to meet a variety of security needs. These features are referred to as controlled features.

Controlled features have categories to help you identify which features can be disabled.

Removable Storage

- USB Access

Connectivity Apps

- Browser App
- Telnet/SSH App

Remote Control

- VNC

Wireless

- Management Wi-Fi
- Bluetooth

Documenting

- Packet Capture
- Network Discovery

Link-Live Cloud Service

- Link-Live Access
- Download from App Store

Removable Storage

USB Access

Both the USB Type-A port on the top of the unit and the Type-C port on the left side of the unit are deactivated when the USB Access feature is disabled. This means that there can be no data transfer in either direction via these ports and that external devices cannot receive power from these ports.

NOTE: The USB Type-C port continues to function to support powering the unit using the AC adapter.

Connectivity Apps

Browser App

The Chromium browser is removed if you disable the Browser App feature. All NetAlly apps that normally provide access to the Chromium browser remove that option. Other apps cannot access the browser.

NOTE: If you re-enable the Browser App feature, the Chromium browser, User Guide, and Video apps are restored but do not appear on the Home screen. See [Apps](#) for more information about the Apps screen.

Telnet/SSH App

The JuiceSSH app, which provides Telnet and SSH client services, is removed when the Telnet/SSH App feature is disabled. All NetAlly apps that normally provide access to this app remove this option.

Remote Control

VNC

The ability to remotely access and control the product UI using a standalone VNC client is deactivated when the VNC feature is disabled. See [Remote Access](#) for more information about this capability.

NOTE: The Link-Live Remote feature remains active when VNC is disabled. To deactivate Link-Live Remote, Link-Live Access must be disabled.

Wireless

Management Wi-Fi

The internal Wi-Fi Management Port, which runs on the main system's 1x1 Dual-band 802.11ac + Bluetooth 5.0 wireless adapter and external Wi-Fi adapters, is deactivated when the Management Wi-Fi feature is disabled. All NetAlly apps that normally provide access to the Wi-Fi management port will remove access to the port.

NOTE: See [Test and Management Ports](#) for more information.

Bluetooth

The internal Bluetooth Port, which runs on the main system's 1x1 Dual-band 802.11ac + Bluetooth 5.0 wireless adapter, is deactivated when the Bluetooth feature is disabled. Peripheral access and data transfer over Bluetooth is not possible.

Documenting

Packet Capture

The Capture app is disabled when the Packet Capture feature is disabled. All NetAlly apps that normally provide access to the Capture app will remove this option.

NOTE: See [Capture](#) for more information.

Network Discovery

The Upload to Link-Live or Save Locally function in the Discovery and Wi-Fi apps are disabled.

NOTE: See [Discovery](#) for more information.

Link-Live Cloud Service

Link-Live Access

The [Link-Live](#) app is disabled when the Link-Live Access feature is disabled. All NetAlly apps and services that provide an interface to Link-Live will remove access.

NOTE: The Link-Live Remote feature and the App Store app are also disabled when Link-Live Access is disabled.

Download from App Store

The App Store app is disabled when the Download from App Store feature is disabled. Adding additional apps to the product is not possible.

NOTE: Disabling Link-Live Access also disables the App Store app.

Controlling Feature Access

The AirCheck G3 supports disabling (and re-enabling) certain features to meet a variety of security needs. These features are referred to as controlled features.

Use the **Feature Access** selection to manage feature access. It is accessible from the left-side [navigation drawer](#) in NetAlly apps, such as AutoTest and Ping/TCP.

Select **Feature Access** to view the **Feature Access** status screen. This screen shows the current state of the controlled features.

To change access to a controlled feature, tap the action overflow icon , and then tap the **Settings** option.

When prompted, enter the admin password, and then tap the **OK** button.

The **Feature Access** screen shows the current state of the controlled features and lets you turn features off or on using the toggle

If you make changes, the **Apply** button at the top of the screen becomes active.

Tap **Apply** as the first step in completing the changes.

A message lists the pending feature changes.

- Select **Yes** to make the pending changes
- Select **No** to cancel the pending changes and return to the Settings screen

After the changes are applied, the unit automatically restarts.

To view the state of the controlled features, visit the **Feature Access** status screen.

Feature Access		
 AirCheck G3 Analyzer		
Removable Storage		
USB Access		Disabled
Connectivity Apps		
Browser App		Disabled
Telnet/SSH App		Disabled
Remote Control		
VNC		Disabled
Wireless		
Management Wi-Fi		Enabled
Bluetooth		Enabled
Documenting		
Packet Capture		Enabled
Network Discovery		Enabled
Link-Live Cloud Service		
Link-Live Access		Enabled
Download from App Store		Enabled

Changing the Administrative Password

NetAlly recommends that you change the factory-set admin password when you configure **Feature Access** to prevent non-administrative users from gaining access to the **Feature Access** screen.

To change the admin password:

1. Follow the procedure in [Controlling Feature Availability](#) to access the **Feature Access** selection screen.
2. From the selection screen, tap the action overflow icon  at the top of the screen to display the overflow menu.

3. Select **Change Password** to display the Current Password entry screen.

4. Enter the current admin password and tap **OK** to continue. (Select **CANCEL** to return to the **Feature Access** selection screen without making any changes.)

NOTE: The factory-set administrative password is: **admin**

5. Wait for the New Password entry screen to display, enter the new password in both fields, and then tap **OK** to complete the admin password change. (Select **CANCEL** to return to the **Feature Access** selection screen without changing the current admin

password.)

Note that you cannot complete the admin password change until the new password fields contain matching entries.

OK

AirCheck G3 Testing Applications

This section of the User Guide describes the NetAlly-developed network testing apps. Each app is specially designed for fast analysis and intuitive operation to enhance and simplify your network tasks.

Open the testing apps by selecting their icons from the Home screen or the Apps screen.

AutoTest App and Profiles

AutoTest is the most comprehensive NetAlly testing application on AirCheck G3. You can quickly run a variety of test types and save their configurations and network credentials for access whenever you need them. The app is fully customizable with test "Profiles" for [Wi-Fi](#) and wireless [Air Quality](#) network connections, as well as individual [Test Targets](#)

AutoTest establishes the [Wi-Fi Test Port connections](#) used by other testing apps, like Ping/TCP and Capture.

AutoTest results are automatically uploaded to [Link-Live Cloud Service](#) after you claim your AirCheck G3.

AutoTest Chapter Contents

This chapter describes AutoTest Profiles, screens, settings, and test results.

[AutoTest Overview](#)

[Managing Profiles and Profile Groups](#)

[Main AutoTest Screen](#)

[Periodic AutoTest](#)

[Wi-Fi AutoTest Profiles](#)

[DHCP, DNS, and Gateway Tests](#)

[Test Targets](#)

AutoTest Overview

AutoTest consists of three distinct testing levels: **Test Targets**, **Profiles**, and **Profile Groups**. You can create as many Profile Groups, Profiles, and Test Targets as you need.

Profile Groups

Profiles

Test Targets

At the bottom level is a set of individual **Test Targets** that connect to network services, such as a web app or FTP site. A Test Target defines parameters including type, target URL/IP address, port number, and Pass/Fail thresholds. More complex tests, like HTTP, allow further

Pass/Fail criteria, such as strings that must or must not be contained in the HTTP body.

A Test Target can be added to and used in any number of **Profiles**.

A **Profile** contains a series of individual network tests. There are two Profile types: Wi-Fi and Air Quality. Wi-Fi Profiles include connection tests and credentials for a Wi-Fi network. Air Quality is a passive scan of your wireless environment. Profiles provide an automated and consistent way to verify a network from layer 1 through layer 7.

A Profile can be added to and used in any number of **Profile Groups**.

A **Profile Group** is a custom-named collection of Profiles. Profile Groups are designed to allow further automation for testing multiple networks or network elements with a single tap of the START button.

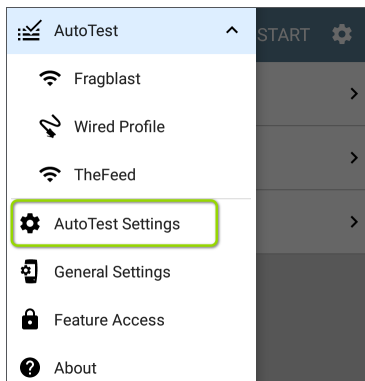

A Test Target can be in any number of Profiles, and a Profile can be in any number of Profile Groups.

For example, you can:

- Test multiple Wi-Fi SSIDs from a single location.
- Test Wi-Fi access from a conference room.

AutoTest Settings Overview

Tap the menu icon  in the AutoTest app to open the Navigation Drawer and access the main AutoTest Settings screen.

NOTE: Your AutoTest Settings screen may not display all of the options shown in the images

above and below, depending on your tester type.

From this screen, you can configure the following:

- **Periodic AutoTest settings:** These are described in the [Periodic AutoTest](#) topic.
- **Upload Connection Log to Link-Live:** When this setting is enabled, your tester will automatically upload the Connection Log to Link-Live each time an AutoTest Profile runs. By default, this setting is disabled and logs do *not* automatically upload. When disabled, you can still view and upload connection logs from various AutoTest Profile results screens.
- **Profile Group settings:** These are described in the [Managing Profiles and Profile Groups](#) topic.

Many configuration actions can also be accessed from the floating action menu .

Managing Profiles and Profile Groups

Profiles are a series, or suite, of tests designed to analyze the different characteristics of your networks. The AirCheck G3 AutoTest app features two types of test profile:

Wi-Fi Profiles to test wireless connections.

Air Quality Profiles to measure channel utilization and interference.

Factory Default Profiles

The AirCheck G3 begins with a default version of the AutoTest profile types, which you can customize, delete, or replace for your purposes.

To customize each Profile with the required network settings and a custom name, tap the

Profile name *first*, and then select the settings  icon.

NOTE: Tapping the settings icon on the main AutoTest screen (shown above) opens the [AutoTest Settings and Profile Group](#) screen, not the individual Profile settings.

- The default **Air Quality Profile** runs when you tap **START** on the main AutoTest screen or the Air Quality screen.
- For the default **Wi-Fi Profile** to run successfully, you must select an SSID and enter security credentials before the AirCheck G3 can connect to a network.

See [Wi-Fi Profile Connection Settings](#).

Adding New Profiles

To add new test profiles to the current AutoTest, tap the floating action button (FAB) on the AutoTest screen.

The profile's configuration screen appears after you select the type of profile you want to add. See the topic for each profile type for a description of its settings.

After you configure the profile settings, tap the back button  at the bottom of the screen to open and run the new test profile.

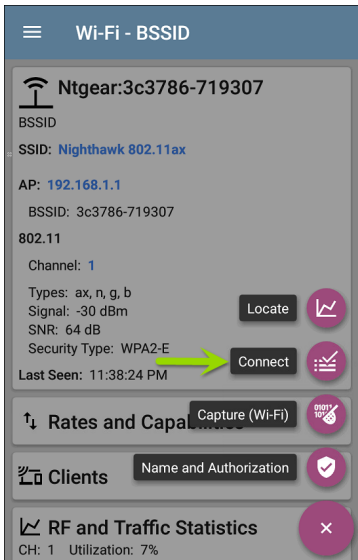

Creating a Wi-Fi Profile from the Wi-Fi Analysis App

You can also create an AutoTest Wi-Fi Profile from the [Wi-Fi Analysis](#) app's [SSID](#) or [BSSID](#) Details screen. This is a quick and easy way to add a Profile to connect to a Wi-Fi network in your vicinity.

1. Open the **Wi-Fi app**  from the Home screen.
2. Tap the menu button  to select the **SSIDs or BSSIDs** list screen.

3. Tap an SSID or BSSID's card to open its Details screen.
4. Tap the FAB (floating action button)  to open the floating action menu.

5. In the floating action menu, tap **Connect**.

A Wi-Fi Profile called "Connect to [SSID/BSSID]" is created in AutoTest.

The SSID, BSSID (if applicable), and Authentication Type are auto-populated in the [Wi-Fi Connection settings](#) for the new profile.

6. Tap **YES** in the pop-up dialog to review and configure additional credentials.

Wi-Fi Connection	
SSID	Nighthawk 802.11ax 2.4GHz
Authentication	WPA2 Personal
Encryption	Auto
Password	
Advanced	BSSID: Ntgear:3c3786-719307 >

7. Enter any additional credentials, like the network Password.
8. After configuring, tap the back button  to return to and run the new Profile.

Profile Groups

AirCheck G3 also allows you to save Profile Groups. Profile Groups are simply **the included list of test Profiles and the order in which they run** when you start an AutoTest. (See [AutoTest Overview](#) for more explanation of Profile Groups.) You can configure and select Profiles and Profile Groups for different locations, jobs, networks, or other purposes.

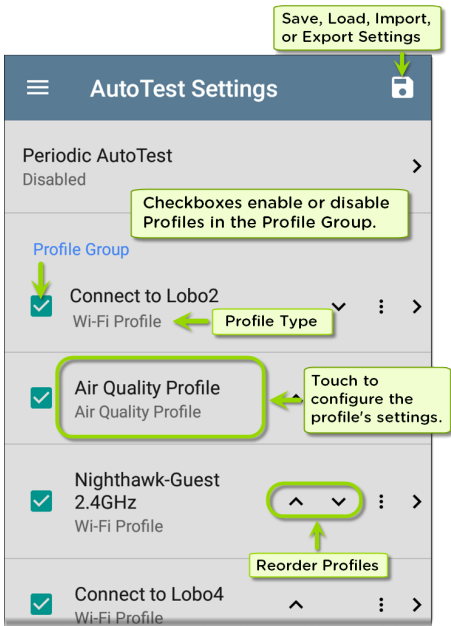

To manage your Profiles and Profile Groups, tap the Settings  button on the main AutoTest screen (with the list of Profiles).

AutoTest Profile Group Settings

The AutoTest Settings screen contains the [Periodic AutoTest](#) and Profile Group settings.

(This section covers Profile Group management. See also [Periodic AutoTest Settings](#).)

You can perform these actions on the AutoTest Settings screen:

- Check or uncheck the boxes to include or exclude a test Profile from the currently active Profile Group.
- Tap the up and down arrows  to reorder the test Profiles on this and the main AutoTest screen for the Profile Group.
- Tap the action overflow icon  to **Duplicate** or **Delete** a Profile.

CAUTION: When you delete a Profile, it is deleted from all Profile Groups. To remove a Profile from the current group, simply uncheck it.

- Tap any Profile's name to open the test and connection settings for the Profile.
- Tap the save icon  to perform the following actions:
 - **Load:** Open a previously saved settings configuration, which includes the Profile Group.

- **Save As:** Save the current settings and Profile Group with an existing name or a new custom name.

See also [Saving App Settings Configurations](#).

- **Import:** Import a previously exported settings file.
- **Export:** Create an export file of the current settings, and save it to internal or connected external storage.

See [Exporting and Importing App Settings](#) for more details.

Each Profile Group can run one or many instances of the profile types. Saved Profiles are available across all of your Profile Groups.

Custom AutoTest Settings/Profile Group Names

By default, the AutoTest app screen shows "AutoTest" in the header, and the AutoTest Settings screen header is "AutoTest Settings." Once you save a custom name, the name

displays in the AutoTest app header and in the AutoTest Settings screen header.

In the example below, the user saves a custom AutoTest configuration named "Springs Campus."

The main AutoTest app screen now displays the custom name in the header.

Creating New Profile Groups

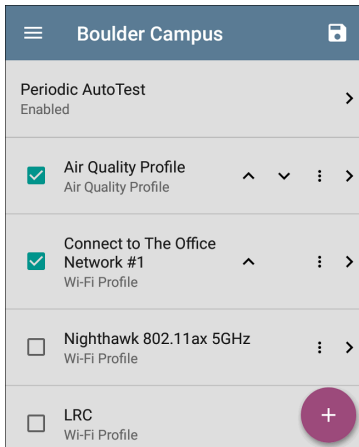

To create a new Profile Group, follow these steps:

1. Go to the AutoTest Settings and Profile Group screen by tapping  on the main AutoTest screen.
2. Uncheck the boxes for any Profiles you do not want included in the new Profile Group.
3. Tap the **FAB**  to add new test Profiles to be included in your new Profile Group.
4. Tap the up and down arrows   to change the order in which the test Profiles run. Unchecked profiles automatically move to the bottom of the list once you leave and revisit this screen.

5. Tap , and select **Save As**. A dialog box opens, where you can enter the new name.

6. Enter a new Profile Group name, and tap **SAVE**. The AirCheck G3 returns to the Profile Group screen with the new group name shown as the title.

When running the "Boulder Campus" configuration shown above, AutoTest first scans the wireless channels for Air Quality results, then connects to "The Office Network #1", and remains connected to that network. This Profile Group will *not* connect to or test the "Nighthawk..." or "LRC" networks.

Import/Export AutoTest Profiles

In addition to creating new profiles or using defaults, you can also:

- Import and export profile settings to any connected external or internal storage. See [Import/Export Settings](#).
- Use the Link-Live cloud service to transfer profile settings to other devices in near-real time. See [Transferring AutoTest Settings to Other Devices Using Link-Live](#).

Main AutoTest Screen

To open the AutoTest app, tap the AutoTest icon  on the [Home screen](#).

Tap the **START** button on the main AutoTest screen to run all the Profiles in the currently active [Profile Group](#).

The AutoTest screens display icons that correspond to the type of profile, test, or measurement. After running, these icons change color to indicate the status of the test:

- **Green** indicates a successful test or measurement within the set threshold.
- **Yellow** indicates a Warning condition.

- **Red** indicates test Failure.

The number of warnings or failures within each test profile is also displayed in a colored circle to the right of each profile card:   (2 Warnings, 1 Failure). The thresholds that control the colored test gradings are adjustable in the settings  screens for each profile and test type.

The green link icon  indicates an active network connection.

Each profile and test is summarized on a card. Tap a profile's or individual test's card to open and view test result details, including the causes of any Warnings or Failures.

Periodic AutoTest

The Periodic AutoTest feature allows you to run AutoTests at set time intervals.

Periodic AutoTest Settings

To enable and configure Periodic AutoTest, open the [AutoTest Settings and Profile Group](#) screen, and tap **Periodic AutoTest**.

The Periodic AutoTest settings screen displays the following options:

Periodic AutoTest	
Periodic AutoTest Enabled	<input checked="" type="checkbox"/>
Interval 10 minutes	
Duration 2 hours	
Add Comment Enabled	<input checked="" type="checkbox"/>
Comment AT Boulder Site	
Append Date & Time Enabled	<input checked="" type="checkbox"/>

Tap the **Periodic AutoTest** field to enable, and adjust the settings below as needed.

Interval: Amount of time between each AutoTest run

Duration: Total length of time Periodic AutoTests run

Add Comment: Enabling this setting allows you to attach a comment to the Periodic AutoTest result in Link-Live Cloud Service. The comment appears as a label on the [Link-Live.com](https://link-live.com) Results page. This setting and the **Comment** setting below are enabled by default.

Comment: This field appears if the **Add Comment** setting is enabled. Enter the label you want to be attached to the uploaded Periodic AutoTest result on Link-Live. The default is "Periodic AutoTest."

Append Date & Time: This field appears if the **Add Comment** setting is enabled and adds a numeric date and time to the end of the **Comment** above.

Running Periodic AutoTest

Tap **START** on the main AutoTest screen to begin Periodic AutoTests. AutoTest continues to run at the set Interval for the selected Duration or until you tap **STOP** in AutoTest.

The Periodic AutoTest Status is summarized at the bottom of the AutoTest screens. Passes and failures are reported for each run of the entire Profile Group, rather than individual Profiles. Periodic AutoTests are skipped if the previous interval's test is still running when the next time interval occurs, such that the next run could not start.

The Periodic AutoTest icon  appears in the top [Status Bar](#) when Periodic AutoTest is running or has completed. Drag down on the

Status Bar to view the corresponding notification.

 AutoTest ^

Periodic AutoTest Running

Passed: 3

Failed: 2

Skipped: 1

Time Remaining: 54 m

NOTE: AutoTest has priority control of the [Test Ports](#), so other apps, including [Discovery](#), [Wi-Fi](#), [Wi-Fi Capture](#), and [AirMapper](#), are paused while AutoTest completes.

Wi-Fi AutoTest Profiles

A Wi-Fi Profile runs a series of tests by connecting to a selected wireless network.

AutoTest

+

Like the main AutoTest screen, Wi-Fi Profile tests are summarized on cards. Tap a card to view individual test screens.

Each test icon (except the AP) displays green, yellow, or red to indicate the status (or grade) of the completed test step: **Success/Warning/Fail**. The AP Test card shows the name and SSID of the connected AP. The AP test is not graded, so the icon stays black.

Wi-Fi Profiles do not run automatically. The factory default Wi-Fi Profile cannot run until you have configured an SSID with the proper credentials. (By default, AutoTest starts in Wi-Fi passive scanning mode if you do not have a profile set up.)

See the [Wi-Fi Profile Settings](#) topic for instructions.

After connecting to a network during a Wi-Fi connection test, AirCheck G3 remains connected until you run another Wi-Fi or [Air Quality](#) Profile or open the [Wi-Fi app](#). Wi-Fi Test Port linkage is

indicated in the top [Status Bar](#) with this notification icon, , which also shows the connected channel.

NOTE: When running an AutoTest Profile that connects to a network with a [Captive Portal](#), a system notification icon  appears in the top Status Bar. Open and select the notification to open a web browser window where you can enter the required information for the captive portal.

Wi-Fi-Profile-Specific AutoTests

The tests that are specific to a Wi-Fi Profile include the wireless Link, Channel, and AP tests.

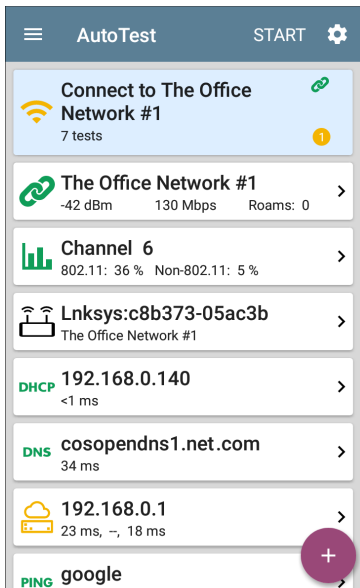

The link and channel cards update in real time to display the connection measurements for as

long as AirCheck G3 remains connected to the wireless network.

- Skip to [Wi-Fi Profile Settings](#).
- Skip to [Wi-Fi Profile Results](#).
- Skip to [DHCP, DNS, and Gateway Tests](#).
- Skip to [Test Targets](#).

Wi-Fi Profile Test Results

The image below shows a completed AutoTest Wi-Fi Profile.

This Profile connects to SSID "The Office Network #1." The Profile is displaying one **Warning** condition from a timeout of the second Gateway ping.

On the Wi-Fi Profile screens, you can perform these actions:

- Tap any of the test result cards, like  Link ,  Channel, or  AP, to open the individual test result screens.
- From any individual test screen, tap the settings icon  to go directly to the settings for the current test.
- On individual test screens, tap [blue underlined links](#) to open a [Wi-Fi](#) app Details screen showing the selected device or ID.
- Tap other **BLUE LINKS** or the action overflow icon  at the bottom of test results screens for additional actions.

NOTE: Blue links and action icons do not appear on every test screen. If the network connection is dropped, you may need to rerun the Profile to re-establish link and enable additional actions.

The individual test cards and screens using the Wi-Fi Profile results for the "LRG" SSID are shown below.

Wi-Fi Link Test Results

 **LRG**
-40 dBm 486 Mbps Roams: 4 >

The Wi-Fi link test card indicates whether you can connect to the configured network at your current location. The Wi-Fi Link card displays the SSID, current signal strength (dBm), link speed (Mbps), and number of roams.

Refer to [Wi-Fi Connection Settings](#) if needed.

Tap the card to open the Link test screen.

Wi-Fi Link Test Screen

AutoTest

CoFC-GuestNet

 AP: [543d372c7ed8](#)
 BSSID: [RuckusWi:543d37-2c7ed8](#)
 Channel: 11

Results
 Signal (dBm) ↖ ↗
↘ ↙
 --

The Wi-Fi Link test screen shows these results:

SSID

Security: Security protocol in use on the network

Roams: Number of times the unit has disconnected from the previous AP and connected to a different AP with a better signal strength. This behavior is partly controlled by the **Roam Threshold** in the [Wi-Fi Connection](#) settings.

AP: Name, IP, or MAC address of the AP to which the Tester is connected, depending on the information AirCheck G3 can see about the AP. This field shows the custom User Name if one has been entered. See [Assigning a Name and Authorization to a Device](#) in the Wi-Fi app chapter.

BSSID: BSSID of the access point

Channel: Channel number on which the AP is operating

Last Roam From: If the AirCheck G3 has roamed to a new AP, the previous AP's name, BSSID, and Channel display.

AP: AP from which the AP last roamed

BSSID: BSSID of the access point

Channel: Channel number on which the AP is operating

Wi-Fi Link Trending Graphs

AirCheck G3's trending graphs operate similarly across different testing apps, allowing you to pan and zoom to view different time intervals. Swipe, double tap, and move the slider to adjust the graph views. See the [Trending Graphs](#) topic for an overview of the controls.

Results

	Cur	Min	Max	Avg
Signal (dBm)	-38	-79	-23	-48
Noise (dBm)	-92	-98	-89	-92
SNR (dB)	54			44

	Cur	Min	Max	Avg
802.11 %	7	1	29	7
Non-802.11 %	2	0	21	3
Total	9			10

The Wi-Fi Link Test graphs save and display data for up to 24 hours in the past if the unit stays linked. The default time interval shown is 2 minutes.

Under each graph, a legend table displays the Current, Minimum, Maximum, and Average measurements. The Current column contains measurements from the last second. Min, Max, and Avg columns show cumulative measurements.

Signal (dBm) graph: Plots the signal strength in dBm of the connected AP.

- Green vertical bars - The tester roamed to a new AP.
- Signal - The AP's signal strength in dBm.
- Noise - The noise level in dBm on the channel used.
- SNR - The network's signal-to-noise ratio in decibels (dB).

Results

	Cur	Min	Max	Avg
Signal (dBm)	-38	-79	-23	-48
Noise (dBm)	-92	-98	-89	-92
SNR (dB)	54			44

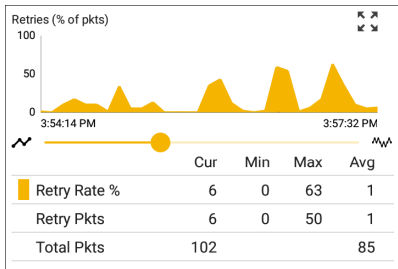

Utilization (%) graph: Plots percentage of the connected channel's capacity being used by 802.11 devices and by non-802.11 interference.

- Green vertical bars - The tester roamed to a new AP.

Retries (% of packets) graph: Plots percentage of transmitted packets that are retry packets

- Retry Rate % - The percentage of total packets that are retry packets.
- Retry Pkts - The number of retry packets seen in the current sample cycle.

- **Total Pkts** - The total number of packets transmitted in the current sample cycle.

PHY TX Rate (Mbps) graph: Plots the physical transmission rate. The green horizontal dotted line shows the AP's maximum TX rate.

Ping or TCP Connect Response Time graph:

This graph displays on the Link test screen if you run a Ping or TCP Connect test, using the [Ping/TCP](#) app, over the Wi-Fi test port connection while the Profile is linked.

Follow these steps to view the Response Time graph:

1. Tap the blue **PING** hyperlink at the bottom of the Link test screen. This opens the Ping/TCP app with the **Interface** set to Wi-Fi Port and **Protocol** set to Ping.
2. Access and adjust the Ping/TCP settings as desired.
3. **START** the Ping or TCP Connect test.

4. Tap back  to go back to the AutoTest Wi-Fi Link screen. The Response Time graph appears near the bottom of the screen and updates in real time along with the other graphs for the duration of the Ping/TCP test.

Result Codes: Final status of the test (Success or Failure)

Other Actions

Scroll to the bottom of the link test screen to access action links (in blue):

- Tap **PING** to open the **Ping/TCP** app.
- Tap **CONNECT LOG** to view the **Wi-Fi connection log**.
- Tap the action overflow menu icon **...** to open an additional menu:
 - Tap **Capture** to open the **Capture** app to run a Wi-Fi packet capture on the connected channel and AP.
 - Tap **Upload graphs to Link-Live** upload graphic results to Link-Live. This opens the Link-Live sharing screen.

1. Use the default file name (which has a <DATE-TIME> format) or tap the Graphs Image Name field to open a touch keyboard to type a custom name.
2. Tap SAVE TO UPLOADED FILES to upload to the Results page  on Link-Live.com.

Connect Log

	Connect Log	
4:52:26.734 PM	Wireless: SSID LRG	
4:52:27.100 PM	WPA2 Personal	
4:52:29.892 PM	Link Down	
4:52:29.892 PM	Connecting to AP: 18:b1:69:c8:43:8d Chan 1	
4:52:29.893 PM	Send Open Authentication Request	
4:52:30.317 PM	Authentication Timeout	
4:52:30.319 PM	Connecting to AP: 18:b1:69:c8:43:8d Chan 1	
4:52:30.319 PM	Send Open Authentication Request	
4:52:30.320 PM	Receive Open Authentication Success	
4:52:30.320 PM	Send Association Request	
4:52:30.320 PM	Wireless: WPA2 Info Element: Mcast=([4] AES-CCMP) Ucast=([4] AES-CCMP) Auth=([2] PSK)	
4:52:30.321 PM	Receive Association Success	

The Connect Log shows the Wi-Fi connections, including driver activity, supplicant, and the DHCP process. The Connect Log can be especially helpful for identifying linking or roaming problems.

Select the action overflow icon  at the top right on the Connect Log screen to attach the log to its associated AutoTest result on the [Link-Live](#) website, or attach the Connect Log from the [floating action menu](#)  on the main Profile screen. See [Wi-Fi Profile FAB](#) below.

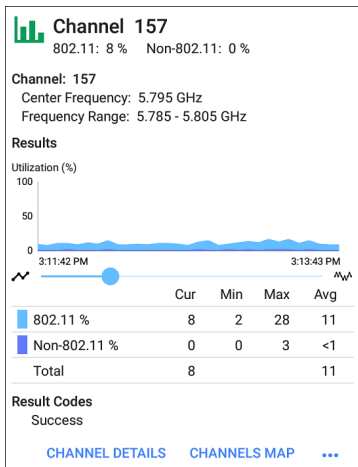

Channel Test Results

The Channel card shows the channel on which the AP is operating and the current 802.11 and Non-802.11 utilization.

Refer to [Channel Test Settings](#) if needed.

Channel Test Screen

The Channel Test results screen indicates the **Center Frequency** and **Frequency Range** of the connected channel along with a real-time Utilization graph.

Results: The channel Utilization (%) graph updates in real time for as long as the unit is still

connected to the network. The graph saves and displays data for up to 24 hours if the unit stays linked.

To pan and zoom on the graphs, you can swipe, double tap, and move the slider. See the [Trending Graphs](#) topic for an overview of the graph controls.

Utilization (%) graph: Plots percentage of the connected channel's capacity being used by 802.11 devices and by non-802.11 interference.

- **802.11 %:** Percentage of channel capacity being used by 802.11 devices
- **Non-802.11 %:** Percentage of channel capacity being used by non-802.11 interference
- **Total:** Total percentage of both 802.11 and non-802.11 channel utilization

Results Codes: Final status of the test (Success or Failure)

Other Actions

Scroll to the bottom of the link test screen to access action links (in blue):

- Tap **CHANNEL DETAILS** to open the Wi-Fi app's **Channels** display.
- Tap **CHANNELS MAP** to open the Wi-Fi app's **Channels Map** display.
- Tap **CAPTURE** to open the **Capture** app to run a Wi-Fi packet capture.

AP (Access Point) Test

The AP card shows the AP's name and the SSID of the network it is supporting. The AP name or address shown is based on what the AirCheck G3 is able to gather from the device and network. If the AP has a **custom user name**, that name is shown on the card and test screen.

The AP test is not graded, so the icon remains black.

AP Test Screen

The screenshot shows the 'AutoTest' application interface. At the top is a dark blue header with a hamburger menu icon on the left, the text 'AutoTest' in the center, and a gear icon on the right. Below the header, the main content area has a white background. It starts with a Wi-Fi icon and the IP address '10.24.8.29' in large bold text, with 'LRG' underneath. This is followed by 'Device Name: 10.24.8.29' in blue. Then, 'IP Address: 10.24.8.29' and 'MAC Address: Sonicw:18b169-c84603' are listed. Next is 'SSID: LRG' in blue, followed by 'Security: WPA2-P' and 'Roams: 0'. A section separator '802.11' is shown, followed by 'Channels: 157, 159', 'Type: n', and 'Supported Types: b, g, n'. Below this are 'Client Associations: 3' and 'Roam Scans: 3'. At the bottom, there are three blue links: 'CONNECT LOG', 'PATH ANALYSIS', and an ellipsis '...'.

In addition to the AP name and SSID, the AP test screen shows the following:

Device Name: AP's name or address

IP Address: The AP's assigned IP address. If none could be determined, the field displays dashes --.

MAC Address: The AP's MAC address

SSID: Name of the network on which the AP is operating

Security: Security protocol in use on the network

Roams: Number of times the unit has roamed and connected to a different AP

802.11

Channel(s): Channel or channels the AP is operating on. If the BSSID is on multiple channels, the **bold** channel number indicates the primary channel.

Type: 802.11 type in use on the current link

Supported Types: 802.11 types that the BSSID supports. If none could be determined, the field displays dashes --.

Client Associations: The number of client devices connected to the AP

Other Actions

Scroll to the bottom of the link test screen to access action links (in blue):

- Tap **CONNECT LOG** to view the [Wi-Fi connection log](#).
- Tap **CAPTURE** to open the [Capture](#) app to run a Wi-Fi packet capture.

DHCP, DNS, and Gateway Results

See [DHCP, DNS, and Gateway Tests](#).

PING FTP TCP HTTP Target Tests

See the [Test Targets](#) topic for information on target test results.

Other Actions (Wi-Fi Profile FAB)

Tap the floating action button (FAB) on the Wi-Fi Profile AutoTest Profile screen to open a floating menu for additional actions:

- Tap **Test Targets** to open the [Test Targets](#) screen. You can add Ping, TCP Connect, HTTP, and FTP target tests to the current profile.
- Tap **Add Connection Log** to open a Link-Live sharing screen that allows you to give a custom name to the log file.

Connection Log Name

20191022_122355

 [SAVE TO TEST RESULT](#)

1. Use the default file name (which has a <DATE-TIME> format) or tap the text field to enter your desired log name.
 2. Tap **SAVE TO TEST RESULT** to upload the named log file.
- Tap **Add Comments** to open a Link-Live sharing screen where you can add enter comments for the results.
 1. Use the default file name (which has a <DATE-TIME> format) or tap the text field to open a touch keyboard to type a

comment.

2. Tap **SAVE TO LAST TEST RESULT** to upload to the Results page  on [Link-Live.com](https://link-live.com).
- Tap **Add Picture** to open the **Gallery** app to select a photo that is then uploaded and attached to your test result.
 1. Use the default file name (which has a <DATE-TIME> format) or tap the Graphs Image Name field to open a touch keyboard to type a custom name.
 2. Tap **SAVE TO UPLOADED FILES** to upload to the Results page  on [Link-Live.com](https://link-live.com).
- Tap **Add Picture** to open the **Gallery** app to select a photo that is then uploaded and attached to your test result.

See the [Link-Live App](#) chapter to learn more about Link-Live and uploading.

Wi-Fi Profile Settings

These settings control which network is tested, how the AirCheck G3 connects, thresholds for **Success**/**Warning**/**Fail** results, and any user-added test targets.

To configure the profile settings, tap the settings icon  on the Wi-Fi Profile screen, or [add a new Wi-Fi Profile](#) to AutoTest.

Tap the links below to skip to later sections in this topic:

- [Wi-Fi Connection Settings](#)
- [Certificates](#)
- [Advanced Wi-Fi Connection Settings](#)
- [Channel Test Settings](#)

Wi-Fi Profile	
Name	Connect to The Office Network #1
Wi-Fi Connection	The Office Network #1 / WPA2 Personal >
Channel Test	2 enabled thresholds >
IP Configuration	DHCP: Enabled >
DNS Test	www.google.com >
Gateway Test	Timeout Threshold: 100 ms >
Test Targets	0 target(s) >

On the **Wi-Fi Profile** settings screen, tap each field described below as needed to configure the profile. Changed settings are automatically applied.

NOTE: If you add a new Wi-Fi profile from the [Wi-Fi Analysis](#) app, the Profile Name, SSID, and Authentication type are auto-populated. See [Creating a Wi-Fi Profile from the Wi-Fi Analysis App](#).

When you finish configuring, tap the back button  to return to the profile.

Name

Tap the **Name** field to enter a custom name for the profile. This name appears on the main AutoTest screen profile card and the Wi-Fi profile screen header.

Wi-Fi Connection Settings

Open **Wi-Fi Connection** settings to configure network IDs, security credentials, and test thresholds for the Link  test. These settings control the [Wi-Fi Test Port](#) connection.

Wi-Fi Connection	
SSID	QA-Ruckus-WPA2-E
Authentication	WPA2 Enterprise
Encryption	Auto
EAP Type	EAP TLS
Username	TestUser
Certificate	client_cert_freeradius.p12 >
Advanced	BSSID: Any, Wi-Fi Band: Auto >

SSID

Tap to enter an **SSID** or select from the list of discovered SSIDs. If you do not enter a custom

Name for the Profile, the SSID is displayed as the Wi-Fi Profile's name.

Authentication

If you selected an **SSID** from the drop-down list of discovered SSIDs in the setting above, or created a "Connect to [SSID]" profile from the Wi-Fi app, the Authentication type is automatically selected. If needed, tap to open the **Authentication** dialog and select the correct security type for the network.

The following settings depend on the Authentication type. Enter all necessary credentials for the network security type, such as Encryption, Keys, EAP type, username, certificate, and/or password.

WEP Key

This setting appears if the Authentication type is **WEP Shared** or **WEP Auto**. Tap to select the correct key type (ASCII or Hex) and enter the key.

Encryption

Tap to select an encryption type if needed. The default is "Auto."

EAP Type

This setting appears if the Authentication type is **WPA/WPA2/WPA3 Enterprise**. The default is PEAP MSCHAP V2. Tap to select a different EAP type if needed.

Username

This field appears along with multiple authentication types. Tap the **Username** field to enter your username.

Certificate

This setting appears if you selected one of the following EAP types: **EAP TLS**, **PEAP TLS**, or **TTLS EAP TLS**.

Tap to open the Certificates screen.

This screen displays all the certificates that have been imported to AutoTest via the Wi-Fi Profile settings.

- Tap the radio button to the left of an imported certificate to select and use it with the current Profile.
- Tap a certificate's row to edit its name and description.

- Tap the action overflow icon  to **Delete** an imported Certificate.
- Tap the floating action button (**FAB**)  to import a new certificate file.

AirCheck G3 supports these certificate file extensions:

- .pem
- .p12
- .cer
- .crt

The imported certificate feature is meant for client authentication and must include the private key. The AirCheck G3 supports 1-way client authentication only; mutual authentication, Server, and CA/Root certificates are not supported. While AirCheck G3 can perform a key exchange, it does not authenticate the server certificate.

[Tap here](#) to skip the following "How to" section and go to [Advanced Wi-Fi Connection Settings](#).

How to Import a Certificate:

Certificate files can be imported from either an inserted storage device (USB) or the AirCheck

G3's internal file system.

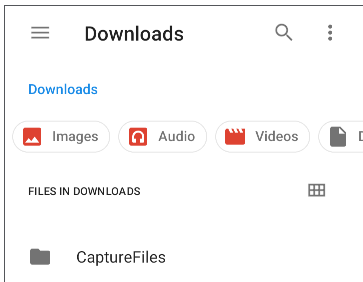

1. Make the certificate file available on your AirCheck G3 unit by saving it to a USB drive inserted into your unit or by transferring to the file system using a USB-C cable or email. (See [Managing Files](#) for help.)
2. To run an [AutoTest Wi-Fi Profile](#) using certificate authentication, set up the profile with the following settings:
 - a. Authentication: **WPA/WPA2/WPA3 Enterprise**
 - b. Encryption: **Auto**
 - c. EAP Type: **EAP TLS, PEAP TLS, or TTLS EAP TLS**
3. In **AutoTest > Wi-Fi Connection** settings, tap the **Certificate** setting to open the Certificates screen.

4. Tap the floating action button (FAB)  to open the Import Certificate dialog box.

5. Tap **Click to select** beneath the Certificate field to open the [Files](#) app.

6. In the Files app, navigate to the folder or storage device where your certificate file is saved.
7. Tap the menu button  to open the left-side [navigation drawer](#).
8. Navigate to the required certificate file, and tap to select it.

After you select the file, the Files app closes, and the Import Certificate dialog displays the chosen certificate file.

9. Enter the certificate's password if it is password protected.
10. Tap **IMPORT**.
11. If desired, tap the fields to edit the **Name** and **Description** of the certificate. The name defaults to the certificate file name.
12. Tap the back button  to return to the Certificates list screen. The newly added certificate appears selected in the list.
13. Tap the back button  to return to the Connection settings.

After running the AutoTest, you can review the **Connect Log** from the [Wi-Fi Link Test screen](#) to verify or troubleshoot certificate authentication.

Username

This field appears along with multiple authentication types. Tap the **Username** field to enter your username.

Password

This field appears along with multiple security types. Tap the **Password** field to enter the network password.

Advanced (Wi-Fi Connection) Settings

Advanced	
BSSID	Any
Wi-Fi Band	Auto
Roam Threshold	-70 dBm
Link Test Thresholds	4 enabled thresholds >
Alternate ID	
User-Defined MAC	<input type="checkbox"/> Disabled

BSSID

Enter or select a specific BSSID for the Wi-Fi Profile to prevent the AirCheck G3 from roaming

or linking to any other BSSID.

Wi-Fi Band

Tap this setting to specify the wireless band(s) on which the Wi-Fi Profile attempts to connect. The default setting of Auto allows the unit to connect on any band. Note that the Profile fails to link if this setting conflicts with the selected bands in [General Settings](#).

Roam Threshold

This threshold controls the Signal Strength (in dBm) at which AirCheck G3 stays connected and looks for another AP on the network with a stronger signal. If found, it disconnects from the current AP and connects to the AP with a stronger signal. Tap the field to select a new value or enter a custom one.

Link Test Thresholds

Open the **Link Test Thresholds** screen to adjust the values that determine **Success/Warning/Fail** results for the following measurements.

 **Link Test Thresholds**

Signal Level Thresholds
Enabled

Warning
-70 dBm

Failure
-85 dBm

Signal-to-Noise (SNR) Thresholds
Enabled

Warning
25 dB

Failure
10 dB

Retries Thresholds
Enabled

Tap each field to select a new value or enter a custom one. Each threshold also has a toggle button that allows you to disable grading based on that measurement entirely.

Signal Level Thresholds: Measured signal from the AP

Signal-to-Noise (SNR) Thresholds: Ratio of measured AP signal to noise level detected on the channel

Retries Thresholds: Retry frames as a percentage of total transmitted frames

Transmit Rate (TX) Thresholds: Measured rate as a percentage of the AP's maximum throughput rate

Alternate ID

Enter an Alternate ID if necessary. This is an Advanced Authentication setting.

User-Defined MAC

This feature can help with tasks such as testing ACL lists (for example, finding out if specific MAC addresses are allowed on the network) or determining if specific IPv4 addresses should be assigned to specific MAC addresses.

1. Tap the toggle field to enable a user-defined MAC for the AirCheck G3. This displays the

current user-defined MAC definition. (If you have not previously provided a definition, the field shows the factory default MAC address.)

2. To enter a new definition, tap the User-Defined MAC definition, enter a new definition, and then tap **OK**. When enabled, **(User-defined)** appears next to the MAC address on the [About](#) screen and on relevant test result screens.

Channel Test Settings

Open **Channel Test** settings to configure Utilization thresholds for the channel test portion of the Wi-Fi profile.

☰	Channel Test
802.11 Utilization Threshold (%)	
Enabled	<input checked="" type="checkbox"/>
Warning	
35 %	
Failure	
75 %	
Non-802.11 Utilization Threshold (%)	
Enabled	<input checked="" type="checkbox"/>
Warning	
30 %	
Failure	
50 %	

802.11 Utilization Threshold (%)

This threshold controls the **Success/Warning/Fail** gradings for the percentage of the connected channel's capacity being used by 802.11 devices.

- Tap the toggle button to enable or disable test grading based on 802.11 utilization.
- Tap **Warning** or **Failure** to select or enter custom percentage values for Warning or Failure results.

Non-802.11 Utilization Threshold (%)

This threshold controls the

Success/Warning/Fail gradings for the percentage of the connected channel's capacity being used by non-802.11 interference.

- Tap the toggle button to enable or disable test grading based on non-802.11 utilization.
- Tap **Warning** or **Failure** to select or enter custom percentage values for Warning or Failure results.

DHCP, DNS, and Gateway Settings

See [DHCP, DNS, and Gateway Tests](#)

PING FTP TCP HTTP Test Targets

Tap the **Test Targets** field to open the Test Targets screen and add custom Ping, TCP

Connect, HTTP, or FTP tests to your AutoTest profile. See [Test Targets](#) to learn more.

HTTP Proxy

The Proxy control lets you specify a proxy server through which the AirCheck G3 establishes a network connection. In AutoTest, these settings are used when HTTP Proxy is enabled in an [HTTP](#) or [FTP](#) Test Target.

To use the proxy settings with a web browser, run the Profile, and then, open the web browser while the unit remains linked.

Open the **HTTP Proxy** screen to enable proxy settings.

HTTP Proxy	
Address	my.proxyserver.com
Port	80 (www-http)
Username	johndoe
Password	*****

Tap each field to open a pop-up keyboard and enter the appropriate **Address** (you can enter a proxy name or an address), **Port** (set to match the proxy port), **Username**, and **Password**. Tap **OK** to save your entries.

DHCP, DNS, and Gateway Tests

DHCP	10.250.2.168 <1 ms	>
DNS	Compass 16 ms	>
	10.250.0.1 2 ms, 2 ms, 4 ms	>

These tests are included in the [Wi-Fi](#) AutoTest Profiles. The settings and results fields are the same for each Profile type.

Access AutoTest's DHCP, DNS, and Gateway tests from Wi-Fi Profile settings screens, or by tapping the settings button  from the full results screen for each test type.

Tap [blue links](#) or the blue action overflow icon  on the test results screens for additional actions.

DHCP or Static IP Test

The DHCP (Dynamic Host Configuration Protocol) test indicates whether the AirCheck G3 receives an IP address assignment from the DHCP server.

DHCP Settings – IP Configuration

To open the IP Configuration screen, either:

- Open a Wi-Fi Profile, tap the DHCP summary card, and then, tap the settings button  on the DHCP test results screen.
- Tap the main menu icon , select **AutoTest Settings**, open a Wi-Fi Profile, and then tap **IP Configuration**.

IP Configuration	
DHCP Enabled	<input checked="" type="checkbox"/>
Response Time Threshold 60 s	
Warn When Multiple Offers Enabled	<input checked="" type="checkbox"/>
DHCP Request Options None	
Custom Vendor Class Identifier Enabled	<input checked="" type="checkbox"/>
Vendor Class Identifier NetAllyTool	

DHCP

DHCP is enabled by default. Tap the toggle button to disable DHCP and enter static IP addresses, as described below.

Response Time Threshold

(Appears only if DHCP is enabled.) Tap this field to select a value or enter a custom value to set how long the AirCheck G3 waits for a DHCP server response before failing the DHCP test.

Warn When Multiple Offers

(Appears only if DHCP is enabled.) Depending on how your network is configured, multiple DHCP offers may or may not be a problem. Tap this field to toggle whether AutoTest creates a warning if multiple offers are received.

DHCP Request Options

(Appears only if DHCP is enabled.) Tap this field to open a dialog to select one or more DHCP request options.

Custom Vendor Class Identifier

(Appears only if DHCP is enabled.) Custom Vendor Class Identifier is disabled by default. Tap the toggle button to enable the Vendor Class Identifier field, as described below.

Vendor Class Identifier

(Appears only if Custom Vendor Class Identifier is enabled.) Tap this field to type the vendor class identifier.

Static IP Address

IP Configuration	
DHCP Disabled	<input type="checkbox"/>
Static IP Address	
Subnet Mask 255.255.255.0 /24	
Default Gateway 192.168.1.1	
Primary DNS Server 8.8.8.8	
Secondary DNS Server	

The Static IP address fields for **Subnet Mask**, **Default Gateway**, and **Primary** and **Secondary DNS Servers** only appear if DHCP is disabled. Tap each field to open a pop-up number pad and enter the static addresses as needed. Tap **OK** to save your entries.

NOTE: If the **Static IP Address** setting is left blank, your tester will consider the network under test to be an IPv6 only environment, and no IPv4 Address assignment will take place.

DHCP Test Results

When DHCP is enabled, the DHCP test card and results screen are displayed in the Profile.

The DHCP Test card displays the DHCP server's IP address and the total time for the discover, offer, request, and acknowledgment to complete.

Tap the card to open the DHCP test screen.

NOTE: (User-defined) appears next to the MAC address beneath the DHCP IP address

on the results screen when a User-Defined MAC is enabled for this connection in [General Settings](#) or in the AutoTest profile.

50.0 %

 Offer

 Acknowledge

Device Name: The discovered name of the DHCP Server, or, if no name could be discovered, the IP address

IPv4 Address: IP address of the server

MAC Address: Server's MAC address. Two dashes -- indicate that no MAC address was provided from the server.

Results

Offered: IP address offered by the DHCP server

Accepted: IP address accepted by the AirCheck G3

Subnet Mask: Used to determine which addresses are local and which must be reached via a gateway

Subnet: Combination of the subnet mask and the offered IP address

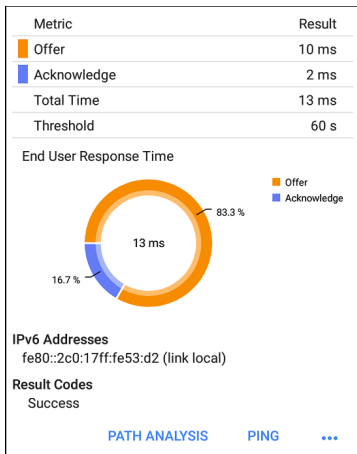

Lease Time: The amount of time the IP address is leased to the AirCheck G3 by the DHCP server

Expires: Expiration date and time of the IP address

Relay Agent: If a BOOTP DHCP relay agent is present, this field shows its IP address. The relay agent relays DHCP messages between

DHCP clients and DHCP servers on different IP networks.

End User Response Time table and chart:
Breakdown of the times for the process of acquiring a DHCP IP address

Offer: Time between when the AirCheck G3 sent the discovery and received an address offer from the DHCP server

Acknowledge: Time between AirCheck G3 sending the request and receiving the acknowledgment from the DHCP server

Total Time: Total amount of time consumed by the DHCP process

Threshold: The DHCP Response Time Threshold from the DHCP test settings, which controls how long the AirCheck G3 waits for a DHCP server response before failing the DHCP test.

End User Response Time: A pie chart showing the Offer and Acknowledgment times as percentages

DHCP Request Options: If you have selected any DHCP Request Options from the IP Configuration screen, this table lists those options. Each row shows the option name, number, and any value received. If the option was not received, double dashes are shown with a yellow Warning dot.

DHCP Request Options	
Option	Value
Time Offset (2)	7h
Time Server (4)	1.1.1.1, 2.2.2.2
Name Server (5)	3.3.3.3, 4.4.4.4
Log Server (7)	5.5.5.5, 6.6.6.6
Host Name (12)	-- ●
Boot File Size (13)	65535

IPv6 Addresses: Addresses obtained via router advertisement

Results Codes: Final status of the test (Success or Failure)

The additional actions available on the DHCP test screen include opening the [Path Analysis](#), [Ping/TCP](#), or [Capture](#) apps populated with the DHCP server address, browsing to the IPv4 address in the web browser, starting a [Telnet or SSH](#) session, or viewing the [Connect Log](#).

Static IP Test Results

If DHCP is disabled, the DHCP test becomes a "Static IP" test and the Subnet and addresses that were entered in the DHCP test settings are displayed.

The Static IP card displays the configured IP and Subnet addresses.

Tap the card to open the test results screen.

 **AutoTest** 

Static IP **192.65.49.18**

DNS Test

For overview information, see [DHCP, DNS, and Gateway Tests](#).

The DNS (Domain Name System) server test checks the performance of DNS servers resolving the specified URL. The AirCheck G3 obtains DNS addresses through DHCP or static address configuration.

DNS Test Settings

☐

DNS Test

To disable the DNS test in your current AutoTest, tap the top field on the this screen to set it to Disabled. The DNS card still appears on the main AutoTest results screen so that you can still see the addresses of the DNS servers. However, the

following lookup values are set to "--", and the Result Code is set to "Test is disabled".

Lookup Name

This is the URL the DNS server(s) attempts to resolve. Tap the field to enter a URL other than the default: www.google.com.

IP Protocol Version

Tap the field to switch between IPv4 and IPv6.

Lookup Time Threshold

This threshold controls how long the AirCheck G3 waits for a response from the DNS server(s) before the test is failed. The default is 1 second. Tap the field to select or enter a new threshold.

Reverse Grading

When Reverse Grading is enabled, a test is considered successful if it fails and a failure if it succeeds. The Results Codes section of the results screen includes the message "Grading has been reversed".

DNS Test Results

The server name and lookup time for DNS 1 are shown on the DNS test card.

Tap the card to open the DNS test results screen.

Gateway Test

For overview information, see [DHCP, DNS, and Gateway Tests](#).

This test indicates whether the default Gateway could be successfully pinged and identifies the address of the current IPv4 and IPv6 routers.

Gateway Test Settings

Gateway Test	
Gateway Test Enabled	<input checked="" type="checkbox"/>
Timeout Threshold 100 ms	
Reverse Grading Disabled	<input type="checkbox"/>

Gateway Test

To disable the Gateway test in your current AutoTest, tap the top field on the this screen to [Back to Title and Contents](#)

set it to Disabled. The Gateway card still appears on the main AutoTest results screen so that you can still see the addresses of the Gateway servers. However, the following lookup values are set to "--", and the Result Code is set to "Test is disabled".

Timeout Threshold

Indicates how long the AirCheck G3 waits for a response from the gateway before grading the test as a fail. Tap the field to select one of the value options, or enter a custom value.

Reverse Grading

When Reverse Grading is enabled, a test is considered successful if it fails and a failure if it succeeds. The Results Codes section of the results screen includes the message "Grading has been reversed".

Gateway Test Results

AirCheck G3 gets the Gateway's IP address from DHCP or the static IP configuration, and uses SNMP to acquire system group information and statistics for the port that services the AirCheck

G3's subnet. See [Discovery Settings](#) for information about [SNMP configuration](#).

Test Targets for Wi-Fi AutoTest

PING	google	>
	28 ms, 28 ms, 15 ms	
TCP	NetAlly	>
	80 ms, 76 ms, 82 ms	
HTTP	github	>
	1.114 s	
FTP	Asset Server	>
	246 ms	

AutoTest Target tests are user-assignable endpoints to which AirCheck G3 attempts to connect each time the AutoTest profile runs. These tests ensure availability of internal or external websites, servers, and devices to users of your network.

Tap a link below to go to the test's topic:

[Ping](#)

[TCP Connect](#)

[HTTP](#)

[FTP](#)

Adding and Managing Test Targets

To add test targets to AutoTest profiles and manage your saved targets, open the **Test Targets** screen from the [Wi-Fi Profile Settings](#)  or by tapping the FAB  on the [Wi-Fi Profile](#) results screens.

The Test Targets screen lists all of the defined and saved Test Targets. Checked boxes indicate the targets enabled in the current Profile. (Test Targets can be added to and used in any number of Wi-Fi Profiles.)

On the Test Targets screen, you can perform these actions:

- Select the checkboxes for each Target you want to include in the current profile.
- Tap the up and down arrows to reorder the saved Test Targets on this screen and the

main AutoTest Profile screen.

- Tap the action overflow icon  to **Duplicate** or **Delete** a target test.

CAUTION: When you delete a Test Target, you delete it from all Profiles. To remove a Test Target from the current profile, simply uncheck it.

- Tap the **FAB** icon  to add a new target test: Ping, TCP Connect, HTTP, or FTP.

- Tap any target test name to open that test's settings. You can then enter a custom test name, target address, or thresholds. For

more information on settings, see:

- [Ping Test](#)
- [TCP Connect Test](#)
- [HTTP Test](#)
- [FTP Test](#)

Target Test Results Screens

The Target Test type icons display green, yellow, or red to indicate the status (or grade) of the completed test portions: **Success/Warning/Fail**.

As an example, in the Ping test image below, the entire Ping test is graded with a Warning because the third Ping was not returned within the Timeout Threshold configured in the settings.

PING google

9 ms, 33 ms, --

Device Name: [172.217.1.196](#)

IPv4 Address: 172.217.1.196

MAC Address: --

Results

Lookup Time: 3 ms

Response Times: 9 ms, 33 ms, -- ●

Threshold: 250 ms

Result Codes

1: Success

2: Success

3: Timeout error (3)

The third Response Time displays two dashes -- to indicate that no response was received, and under the Results heading, the yellow dot points out the third Response Time as the reason for the Warning. Additionally, the third Result Code lists "Timeout error" as the reason for the Warning.

Additional Target Test Actions

[TEST AGAIN](#)[PATH ANALYSIS](#)[...](#)

After the Target test has completed, tap any of the blue links to perform additional actions, including opening other testing apps.

- Tap the blue linked Device Name to open a [Discovery](#) Details app screen for the selected device. From there, you can open other apps and run additional tests.
- Tap [TEST AGAIN](#) to run just the target test again.
- Tap [PATH ANALYSIS](#) to open the [Path Analysis](#) to app with the path destination configured with the current target.
- Tap the action overflow icon  to open the listed apps or tools with the target pre-populated, for example:
 - **Ping** or **TCP Connect** to open the [Ping/TCP](#) app with the current target address.
 - [Capture](#) traffic from the test target.
 - Browse to the target URL on the internet with your [web browser](#) app.

- **Telnet** or **SSH** to open the [Telnet/SSH tools](#) with the current target address.

AutoTest Ping Test

A Ping test sends an ICMP echo request to the selected target to determine whether the server or client can be reached and how long it takes to respond. The AutoTest Target Ping Test sends three Pings to the target and reports the response times. The target can be an IPv4 address, IPv6 address, or named server (URL or DNS).

Ping Test Settings

Ping Test	
Name	google
Device Name	www.google.com
IP Protocol Version	IPv4
Frame Size (bytes)	64
Do Not Fragment	<input type="checkbox"/>
Timeout Threshold	1 s
Reverse Grading	<input type="checkbox"/>

Name

This field allows you to assign a custom name to the test. The name appears on the target test card in the profile.

Device Name

Enter the IP address or URL of the target device. If you enter an IP address, the DNS lookup portion of the test is skipped.

IP Protocol Version

IPv4 is used by default. Tap the field to switch between IPv4 and IPv6.

Frame Size (bytes)

This setting specifies the total size of the payload and the header sent. Valid sizes are 64 bytes to 1518 bytes. To test the Maximum Transmission Unit (MTU) along a route to a target, select the MTU frame size you want to test, and set **Do Not Fragment** to **Enabled**.

Do Not Fragment

Tap the toggle button to enable.

Timeout Threshold

This threshold controls how long the AirCheck G3 waits for a response from the target before failing the test.

Reverse Grading

When Reverse Grading is enabled, a test is considered successful if it fails and a failure if it succeeds. The Results Codes section of the results screen includes the message "Grading has been reversed".

For example, you might have a critical server used by an accounting department. This server must be accessible by the accounting VLAN but not by any other networks. To verify the configuration, you could set up a reverse-graded Ping test, and then run a Wi-Fi AutoTest profile to the server's guest SSID. The test reports a ping failure, which is the desired outcome.

Ping Test Results

The Ping card shows the Ping test name entered in the Ping test settings and the three Ping response times from the target.

Tap the card to open the Ping results screen.

AutoTest Ping Results Screen

PING **google**

2: Success
3: Success

[TEST AGAIN](#) [PATH ANALYSIS](#) ...

Device Name: Hostname or address of the target device.

- **IPv4 or IPv6 Address:** IP address of the target device.

- **MAC Address:** Target device's MAC address. The two dashes -- indicate that no MAC address was provided from the server.

Results

- **Lookup Time:** How long it took to resolve the URL into an IP address.
- **Response Times:** How long it took for the AirCheck G3 to receive a response from the target after sending each of the three connections.
- **Threshold:** The Timeout Threshold indicated in the test's settings.

Results Codes: Final status of the test (Success or Failure) for each of the three connections.

Other Actions

Use the **blue links** or the blue action overflow icon **...** button at the bottom of the test results screens to perform other actions.

- Tap **TEST AGAIN** to run the Ping test again.
- Tap **PATH ANALYSIS** to open the Path Analysis app with the Ping test's information.

- Tap the blue action overflow icon **...** to open another testing app (Ping, TCP Connect, or Capture), to **Browse** to the Ping target address in your web browser, or to start a **Telnet or SSH** session.

AutoTest TCP Connect Test

A TCP Connect test opens a TCP connection with the selected target to test for port availability using a 3-way handshake (SYN, SYN/ACK, ACK). The AutoTest Target TCP Connect test runs three connection tests and reports the response times.

TCP Connect Test Settings

☰ TCP Connect Test	
Name	google
Device Name	www.google.com
IP Protocol Version	IPv4
Port	80 (www-http)
Timeout Threshold	1 s
Reverse Grading	<input type="checkbox"/> Disabled

Name

This field allows you to assign a custom name to the test. The name appears on the target test card in the profile.

Device Name

Enter the IP address or URL of the server you want to ping. If you enter an IP address, the DNS lookup portion of the test is skipped.

IP Protocol Version

IPv4 is used by default. Tap the field to switch between IPv4 and IPv6.

Port

Specify the TCP port number for the AirCheck G3 to use to connect to the target.

Timeout Threshold

This threshold controls how long the AirCheck G3 waits for a response from the target before failing the test.

Reverse Grading

When Reverse Grading is enabled, a test is considered successful if it fails and a failure if it succeeds. The Results Codes section of the results screen includes the message "Grading has been reversed".

TCP Connect Test Results

Other Actions

Use the **blue links** or the blue action overflow icon **...** button at the bottom of the test results screens to perform other actions.

- Tap **TEST AGAIN** to run the Ping test again.
- Tap **PATH ANALYSIS** to open the Path Analysis app with the TCP test's information.
- Tap the blue action overflow icon **...** to open another testing app (Ping, TCP Connect, or Capture), to **Browse** to the target address in your web browser, or to

start a [Telnet or SSH](#) session.

HTTP Test

The HTTP test performs a comprehensive end user response time (EURT) measurement when downloading the specified web page. The target can be an IPv4 address, IPv6 address, or URL.

HTTP Test Settings

HTTP settings allow test grading based on responses, return codes, and time threshold.

HTTP Test	
Name	github
URL	https://www.github.com
IP Protocol Version	IPv4
Allow Redirects	<input checked="" type="checkbox"/> Enabled
Response Time Threshold	10 s
Web Page Transfer Size	ALL
Response Must Contain	

Name

Tap this field to assign a custom name to the test. The name appears on the target test card in the profile.

URL

Enter a target address. To reach web servers that operate on a non-default port, enter a colon (:) and specify the port number after the URL.

IP Protocol Version

IPv4 is used by default. Tap the field to switch between IPv4 and IPv6.

Allow Redirects

Tap the toggle button to permit web redirects when trying to connect to the target.

Response Time Threshold

This threshold controls how long the AirCheck G3 waits for a response from the URL before failing the test. Tap the field to change the value.

Web Page Transfer Size

This setting allows you to limit the amount of data downloaded, ranging from the HTML **Header Only** to the entire page (**ALL**). Tap the field to select a different transfer size.

Response Must Contain	
Response Must Not Contain	
Return Code 200 - OK	
Reverse Grading Disabled	<input type="checkbox"/>
HTTP Proxy Disabled	<input type="checkbox"/>

Response Must Contain

Text entered here functions as **pass/fail** test criteria based on the presence of the text string on a specified server or URL. To construct a text string, enter a word or several words with exact spacing. When specifying several words, they must appear consecutively at the source. The test passes if the text string is found. If the string is not found, the test fails with the Return Code: "Response does not contain required text."

Response Must Not Contain

Like the setting above, except text entered here functions as **pass/fail** test criteria based on the *absence* of the text string on a specified server or URL. The test passes if the text string is not found. If the string is found, the test fails with the return code: "Response contains excluded text."

Return Code

The Return Code set here functions as **pass/fail** test criteria. The default is "OK (HTTP 200)." Tap the field to select a different Return Code from the list. If your selected Return Code value matches the actual return code value, the test passes, and if AirCheck G3 receives a different return code, the test fails.

Reverse Grading

When Reverse Grading is enabled, a test is considered successful if it fails and a failure if it succeeds. The Results Codes section of the results screen includes the message "Grading has been reversed".

HTTP Proxy

The Proxy control in target test settings uses the server address and port specified in the main profile settings. Tap the toggle to use those Proxy settings. See [Wi-Fi Profile Settings](#).

HTTP Test Results

The HTTP card shows the test name entered in the test settings and response time from the target.

HTTP Test Results Screen

HTTP github	
3.671 s	
Device Name: lb-192-30-253-113-iad.github.com	
IPv4 Address: 192.30.253.113	
MAC Address: --	
URL: https://www.github.com	
Results	
Metric	Result
Ping	54 ms
 DNS Lookup	59 ms
 TCP Connect	165 ms
 Data Start	1.288 s
 Data Transfer	2.157 s
Total Time	3.671 s
Threshold	10 s
Data Bytes	90.9 K
Rate (bps)	206.2 K
End User Response Time	

Device Name: DNS name of the server tested

IPv4 or IPv6 Address: IP address of the server

MAC Address: Server's MAC address. The two dashes -- indicate that no MAC address was provided from the server.

URL: The target URL

Results

Ping: A ping test runs simultaneously with the HTTP test, and this result field displays the Ping response time. If the HTTP test finishes before the ICMP echo reply packet arrives, dashes -- are displayed for the ping test results. Ping results do not affect the Pass/Fail status of the test.

DNS Lookup: Amount of time it took to resolve the URL to an IP address. If you enter an IP address, DNS lookup is not required, so dashes are displayed to indicate that this part of the test was not executed.

TCP Connect: Amount of time it took to open the port on the server

Data Start: Time to receive the first frame of HTML from the web server

Data Transfer: Time to receive the data from the target server

Total Time: The end user response time (EURT), which is the total time it took to download the web page. It is the sum of DNS lookup, TCP connect, data start, and data transfer time. If the Total Time exceeds the Response Time Threshold in the settings, the test fails.

If the Response Time Threshold is exceeded during a step in the test, the current phase of the test (DNS Lookup, TCP Connect, Data Start, or Data Transfer) is denoted with a red dot, and the rest of the test is aborted.

Threshold: The Response Time Threshold from the test settings

Data Bytes: Total number of data bytes transferred. This does not include header bytes

Rate (bps): The measured data transfer rate

End User Response Time : Pie chart of the times for each phase of the test (DNS Lookup, TCP Connect, Data Start, and Data Transfer)

Results Codes: Final status of the test (Success or Failure)

The HTTP test also shows the **Return Code** from the website server.

Tap [blue links](#) or the blue action overflow icon [...](#) at the bottom of the test results screens to run the HTTP **TEST AGAIN**, open another testing app, or **Browse** to the target address in your web browser.

Captive Portal Connections

The HTTP test supports connections through a network with a captive portal requirement.

When running a Profile that connects to a network with a [Captive Portal](#), a system

notification  appears to prompt you to enter the captive portal credentials.

For the HTTP test to pass, you must select the notification and enter the required credentials on the portal website. Otherwise, the HTTP test fails, with a Result Code of "Captive portal detected (25)."

See [Captive Portals](#) for more instructions.

When finished in the captive portal browser window, hit the back button  to return to the HTTP test, and tap **TEST AGAIN** to receive valid results.

FTP Test

The FTP test performs a file upload to or download from an FTP server, allowing verification of server and network performance. The target can be an IPv4 address, IPv6 address, or URL. The results provide a complete breakdown of the overall file transfer time into its component parts.

FTP Test Settings

FTP settings allow you to specify a **Get** or **Put** test and the file path and name.

FTP Test	
Name	Asset Server
FTP Server	10.250.2.218
IP Protocol Version	IPv4
File	internal/iperf3
File Transfer Size	ALL
Direction	<input checked="" type="checkbox"/> Get
Response Time Threshold	10 s

Name

This field allows you to assign a custom name to the test. The name appears on the target test card in the profile.

FTP Server

Enter the IPv4 address or URL of the FTP server you want to test. If you enter an IP address, the DNS Lookup portion of the test is skipped.

IP Protocol Version

IPv4 is used by default. Tap the field to switch between IPv4 and IPv6.

File

This setting specifies the path and name of the file that is downloaded from (**Get**) or uploaded to (**Put**) the server, based on the **Direction** setting below. Tap the field to enter the file path and name.

File Transfer Size

This setting lets you limit the amount of data to be downloaded or uploaded. The default transfer size is **ALL**.

- When the **Direction** setting is **Get**, a transfer size of **ALL** causes the download to continue until the entire file is downloaded or the Response Time Threshold is exceeded.

Specifying a transfer size that is greater than file being retrieved does not cause the test to fail. The test stops when the file has finished downloading.

- When the **Direction** setting is **Put**, the default transfer size of ALL causes the AirCheck G3 to create and upload a file that is 10 MB.

Direction

Tap the toggle button to switch between a **Get** (download the **File** from the server) or **Put** (upload the **File** to the server) test.

- If Direction is set to Get, the file is retrieved, and the size and data rate are calculated. This data is discarded as soon as it is downloaded and is not retained on the AirCheck G3.
- If Direction is set to Put, the File named above is created on the FTP server. The size of this file is determined by the **File Transfer Size** setting. The file contains a text string indicating that it was sent from the AirCheck G3, and the test string is repeated to produce the set file size.

Response Time Threshold

This threshold controls how long the AirCheck G3 waits for a response from the FTP server before failing the test. Tap the field to change the value.

Username	
Password	
Reverse Grading Disabled	<input type="checkbox"/>
HTTP Proxy Disabled	<input type="checkbox"/>

Username and Password

Enter these credentials to access the target server you specified. Enter "anonymous" as the username to establish an anonymous connection. The test fails if the configured username or password are not valid on the target FTP server.

Reverse Grading

When Reverse Grading is enabled, a test is considered successful if it fails and a failure if it succeeds. The Results Codes section of the results screen includes the message "Grading has been reversed".

HTTP Proxy

The Proxy control in target test settings uses the server address and port specified in the main profile settings. See [Wi-Fi Profile Settings](#).

FTP Test Results

The FTP card shows the test name entered in the test settings and response time from the target.

FTP Test Results Screen

FTP Asset Server	
171 ms	
Device Name: 10.250.2.218	
IPv4 Address: 10.250.2.218	
MAC Address: --	
Get File: /internal/ipperf3	
Results	
Metric	Result
Ping	50 ms
DNS Lookup	--
TCP Connect	44 ms
Data Start	116 ms
Data Transfer	10 ms
Total Time	171 ms
Threshold	60 s
Data Bytes	24 K
Rate (bps)	1.2 M

Device Name: Hostname of the server tested

IPv4 or IPv6 Address: IP address of the server

MAC Address: Server's MAC address. The two dashes -- indicate that no MAC address was provided from the server.

Get File: File path and name entered in the settings that was transferred to or from the FTP server.

Results

Ping: A ping test runs simultaneously with the FTP test, and this result field displays the Ping response time. If the FTP test finishes before the ICMP echo reply packet arrives, dashes -- are displayed for the ping test results. Ping results do not affect the Pass/Fail status of the test.

DNS Lookup: Amount of time it took to resolve the URL to an IP address. If you enter an IP address, DNS lookup is not required, so dashes are displayed to indicate that this part of the test was not executed.

TCP Connect: Amount of time it took to open the port on the server.

Data Start: Time to receive the first frame from the FTP server.

Data Transfer: Time to receive the file from the target server.

Total Time: The end user response time (EURT), which is the total time it took to download the web page. It is the sum of DNS lookup, TCP connect, data start, and data transfer time. If the Total Time exceeds the Response Time Threshold in the settings, the test fails.

If the Response Time Threshold is exceeded during a step in the test, the current phase of the test (DNS Lookup, TCP Connect, Data Start, or Data Transfer) is denoted with a red dot, and the rest of the test is aborted.

Threshold: The Response Time Threshold from the test settings.

Data Bytes: Total number of data bytes transferred. This does not include header bytes.

Rate (bps): The measured data transfer rate.

End User Response Time: Pie chart of the times for each phase of the test (DNS Lookup, TCP Connect, Data Start, and Data Transfer).

Results Codes: Final status of the test (Success or Failure).

The FTP test also shows the **Return Code** from the server.

Tap [blue links](#) or the blue action overflow icon ... at the bottom of the test results screens to run the **FTP Test Again**, open another testing app, or **Browse** to the FTP server in your web browser.

Air Quality AutoTest Profiles

Air Quality Profiles perform a scan of the channels in your wireless network to measure channel utilization and interference.

Each table on the Air Quality results screen shows the top four channels in each band with the highest utilization, co-channel interference or adjacent channel interference, along with the number of APs operating on the channel.

Air Quality Profile results are described next. Tap here to skip to [Air Quality Settings](#).

The AirCheck G3 scans the 2.4-GHz band first and displays results and then does the same for the 5-GHz band and then the 6GHz band if applicable.

Channel usage depends on the number of clients connected to the network and the amount of interference from devices like microwaves or smartphones using Bluetooth. Very high utilization or interference can affect network performance.

Air Quality Profile Results

The image below shows a completed Air Quality Profile test with two **Warnings** and two **Failures** indicated by the yellow and red dots next to the corresponding measurements.

Top 2.4 GHz Channels By Adjacent Channel Interference

Channel	APs	
2	15	
1	1	
6	1	
--	--	

Air Quality test gradings are based on the Thresholds configured in the Profile's settings. In the case shown here, the Warnings and Failures occurred because of high Utilization and Co-channel Interference caused by the number of APs active on the top three 2.4 GHz channels: 1, 6, and 11.

802.11 Utilization %: Percentage of the displayed channel's capacity used by all 802.11 WLAN devices

Non-802.11 Utilization %: Percentage of the displayed channel's capacity being used by non-802.11 interferers, which may be non-WLAN sources

Two dashes -- indicate that no Utilization was detected on the Channels shown.

Co-channel Interference: Interference caused by multiple APs operating on the same channel that

exceed the minimum **Co-channel Interference AP Signal Level** threshold in the settings. This measurement accounts for 40-MHz and 80-MHz channels in the 5-GHz band by counting an AP on its primary and each secondary channel.

Adjacent Channel Interference: Interference caused by multiple APs operating on adjacent channels that exceed the minimum **Adjacent channel Interference AP Signal Level** threshold in the settings. This is most common in the 2.4 GHz band where channels are 5 MHz apart but span 20 MHz. There are only three channels that do not overlap in this band: 1, 6, 11. Larger channel widths (e.g., 40 MHz) also affects the adjacent channel interference counts.

Results Codes: Final status of the test (Success or Failure)

Viewing and Saving Results

Viewing Channel Utilization

Tap the blue **CHANNELS MAP** link at the bottom of the Air Quality Profile screen to open the **Channels Map** display in the Wi-Fi app. This

display gives you real-time visual results of the utilization on each channel.

Uploading Results to Link-Live

Tap the blue **UPLOAD GRAPHS TO LINK LIVE** to upload graphic results to Link-Live. This opens the Link-Live sharing screen.

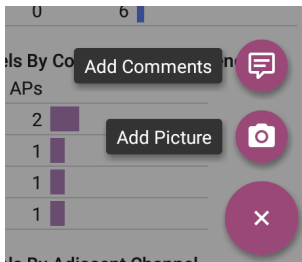

1. Use the default file name (which has a <DATE-TIME> format) or tap the Graphs Image Name field to open a touch keyboard to type a custom name.
2. Tap **SAVE TO UPLOADED FILES** to upload to the Results page  on [Link-Live.com](https://link-live.com).

Air Quality Profile FAB

(Optional) On the AutoTest Air Quality Profile results screen, tap the floating action button (FAB) and follow the screen instructions to attach comments and images to the results on the [Link-Live](https://link-live.com) website.

- The **Add Comments** option opens a Link-Live sharing screen where you can enter text and job comments.

- The **Add Picture** function lets you open the Gallery app to select that is then uploaded and attached to your test result.

Air Quality Profile Settings

To configure the profile settings, tap the settings icon  on the Air Quality Profile screen, or add a new Air Quality Profile to AutoTest.

 **Air Quality Profile**

Name Air Quality Profile
Channel Scan Cycles 3
AP Signal Level Threshold -75 dBm
Grading
Utilization Enabled 
Warning 35 %
Failure 75 %

The settings for Air Quality are thresholds for grading the channel utilization and interference.

On the **Air Quality Profile** settings screen, tap each field described below as needed to

configure the profile. Changed settings are automatically applied.

When you finish configuring, tap the back button  to return to the profile.

Name

Tap the **Name** field to enter a custom name for the profile. This name appears on the main AutoTest screen profile card and the Air Quality profile screen header.

Channel Scan Cycles

This setting designates the number of times all of the channels should be scanned before reporting the results. Tap the field to enter a new value between 1 and 10.

AP Signal Level Threshold

This setting designates the minimum signal level at which an AP must be measured to be counted in Co-Channel and Adjacent Channel Interference measurements. Tap the field to select a new value or enter a custom one.

Grading

Use the grading threshold controls to adjust the values that determine **Warning/Fail** results for the corresponding utilization and co-channel interference and adjacent channel measurements. Tap each Warning or Failure field to select a new value or enter a custom one. Each threshold also has a toggle button that allows you to disable grading based on that measurement entirely.

Thresholds

Use the threshold controls to adjust the values that determine **Warning/Fail** results for the corresponding utilization and co-channel interference and adjacent channel measurements. Tap each Warning or Failure field to select a new value or enter a custom one. Each threshold also has a toggle button that allows you to disable grading based on that measurement entirely.

By default, you can set thresholds for both 802.11 and non-802.11 Utilization.

Utilization measurements and thresholds are percentages of a channel's capacity. Co-channel

interference measurements and thresholds are the number of APs operating on the same channel.

Adjacent Channel Interference measurements and thresholds are the number of APs operating on nearby channels that cause interference.

Co-Channel Interference Enabled	<input checked="" type="checkbox"/>
Warning Threshold 4 APs	
Failure Threshold 8 APs	
Adjacent Channel Interference Enabled	<input checked="" type="checkbox"/>
Warning Threshold 4 APs	
Failure Threshold 8 APs	

Ping/TCP Test App

The Ping/TCP test app runs a Ping or TCP Connect test to your chosen target, allowing you to monitor connectivity changes.

A Ping test sends an ICMP echo request to the selected target to determine whether the server or client can be reached and how long it takes to respond. A TCP Connect test opens a TCP connection with the selected target to test for port availability using a 3-way handshake (SYN, SYN/ACK, ACK).

You can open the TCP/Ping app from the Home screen, or you can select **Ping** or **TCP Connect** from another app, such as AutoTest or Discovery, while viewing a device's details.

Ping/TCP Settings

To configure a test, you can manually enter a hostname or IP address in the settings, or you can select Ping or TCP Connect from another testing app's device screen.

Populating Ping/TCP from Another App

When you open the Ping/TCP app from another app, the address is pre-populated as the Ping or TCP target device. For example, the floating action button (FAB) menu on the [Discovery](#) app screen shown below contains the option to open the Ping/TCP app.

cos-lab-vm-cisco
Router
Name
SNMP: cos-lab-vm-cisco
Address
IPv4: 10.250.0.11 (Reachable)
MAC: Cisco:40f4ec-f47681
Protocols: Statically Configured Router
Attributes: Discovered via SNMP, Switch, Port Aggregation

Addresses → Ping/TCP
IPv4: 2 MAC: 1

VLANs Capture (Wired)
1, 196, 500, 508, 526, 560

Interfaces Browse
Up: 2 Down: 41

SNMP

If you open the Ping/TCP app from this screen, the IPv4 address from the Discovery app is already configured as the Ping/TCP target.

≡ Ping START ⚙️

PING/TCP 10.250.0.11

Configuring Ping/TCP Settings Manually

To configure the target and settings manually, open the app's settings .

Ping/TCP Settings	
Device Name	www.google.com
IP Protocol Version	IPv4
Interface	Any Port
Number Of Tests	Continuous
Beep On Loss	<input checked="" type="checkbox"/>
Protocol	Ping
Frame Size (bytes)	

Device Name: Enter the IP address or DNS name of the target.

IP Protocol Version: IPv4 is used by default. Tap the field to enable IPv6 instead.

Interface: This setting determines the AirCheck G3 port from which the port scan runs. Tap the field to select the port. (See [Selecting Ports](#) for explanations of the different ports.)

Number of Tests: Tap to select the number of Ping or TCP connect tests you want to run. The default setting of **Continuous** keeps running tests until you tap the **STOP** button.

Beep On Loss: Tap to enable or disable an audible beep sound when packet loss is detected. The beep will sound even if the Ping/TCP app is not currently displayed. (If you cannot hear the beep, try turning up the device volume.)

Protocol: Tap to select the **Ping** or **TCP Connect** protocol for the test.

Some of the following settings depend on the selected protocol.

Frame Size (bytes): (Appears only if the **Ping** Protocol is selected.) Specifies the total size of the payload and header the AirCheck G3 sends. Tap a radio button to select a new size, or enter a Custom Value from 64 to 1518 bytes.

To test the Maximum Transmission Unit (MTU) along a route to a target, select the MTU frame size you want to test, and set the **Do Not Fragment** setting (below) to **Enabled**.

Interval: (Appears only if the **Ping** Protocol is selected.) Controls how much time passes between each Ping sent from the AirCheck G3. By default, Pings are sent once every second (1 s). Tap a radio button to select a different interval, or enter a Custom Value between 100 and 10,000 milliseconds.

Port: (Appears only if the **TCP Connect** Protocol is selected.) Indicates the port number your AirCheck G3 uses to connect to the target address for a TCP Port Open test. If needed, tap the **Port** field to open a pop-up number pad and enter a new port number. Tap **OK** to save it.

Timeout Threshold: This threshold controls how long the AirCheck G3 waits for a response from the target before the test is failed.

Do Not Fragment: (Appears only if the **Ping** Protocol is selected.) Tap the toggle button to enable. See the Frame Size setting description above.

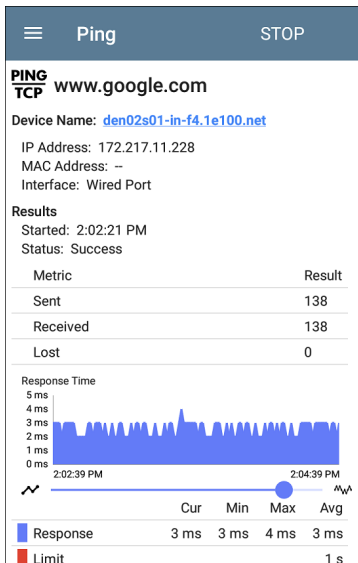

Running Ping/TCP Tests

Your unit must be connected to an active network ([Test or Management Port](#)) to run Ping and TCP Connect tests. Icons in the top Status Bar indicate whether and how your AirCheck G3 is connected. See [Connection Notifications](#) for descriptions of the connection status icons, and select the appropriate **Interface** (or Any Port) from the [Ping/TCP settings](#).

The default target is google.com. Open the app settings  to enter a new target.

To begin the test, tap **START**.

If the Number of Tests setting is set to **Continuous**, the Ping/TCP app runs tests to your selected target until you tap **STOP**.

Device Name: Hostname or address of the target device

IPv4 or IPv6 Address: IP address of the target device

MAC Address: Target device's MAC address. The two dashes -- indicate that no MAC address was provided from the device.

Port: The port number used for the TCP Connect test. This field does not appear in Ping test results.

Interface: The AirCheck G3 Test or Management Port from which the test is running

Results

- **Started:** Time the test started
- **Status:** Most recent test status
- **Sent:** Number of Pings or TCP SYN packets sent to the target
- **Received:** Number of Ping or TCP SYN/ACK packets returned from the target
- **Lost:** Number of Pings or TCP packets that were not returned from the target

Response Time graph: Plots the target device's response times in milliseconds. The graph saves and displays data for up to 24 hours in the past if the unit stays linked.

To pan and zoom on the graph, you can swipe, double tap, and move the slider. See the [Trending Graphs](#) topic for an overview of the graph controls.

Response: Table display of the Current, Minimum, Maximum, and Average response time measurements

Limit: The **Timeout Threshold** from the Ping/TCP app's settings

Capture App

Packet capture is the process of recording network traffic in the form of packets as data streams back and forth over the Wi-Fi connections. Packet captures can help you analyze network problems, debug client/server communications, track applications and content, ensure that users are adhering to administration policies, and verify network security.

The capture process uses the [Wi-Fi Test port](#).

You can open the Capture app from the Home screen or using a link from another app, such as AutoTest, Discovery, or Wi-Fi.

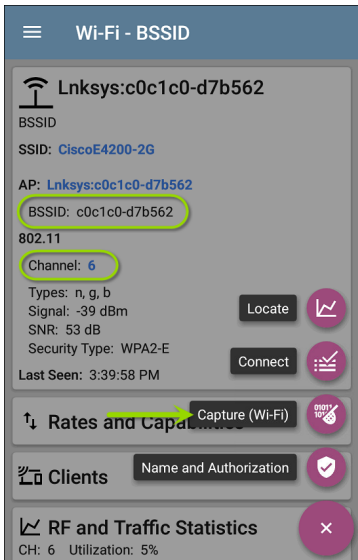

Capture Settings

The Capture app settings allow you to designate file and slice sizes, and apply filters to capture and analyze only certain packet types. For example, you can create a Wi-Fi filter to capture only packets to and from a particular AP or client.

When you open Capture from Home and do not configure any filters, all packets from the switch or channel are captured. The default Wi-Fi capture saves the packets seen on channel 1.

If you open the Capture app from another NetAlly test app, Capture filters are automatically applied. Filters that can be applied from other apps include Wi-Fi Channel, Channel Width, and BSSID.

For example, the [floating action menu](#) on the Wi-Fi app's [BSSID Details screen](#) below contains the option to start a Wi-Fi Capture.

When the Capture app opens, filters are already set with the BSSID, Channel, and Channel Width from the Wi-Fi app.

The Capture settings are saved until you clear the filters or open the app with new filters applied.

Tap the settings icon  in the Capture screen to configure capture settings.

Capture Settings	
File Size Limit	1 MB
Slice Size	Full Packet
Capture Port	Wi-Fi
Channel	34
Channel Width	20 MHz
Wi-Fi Filters	
BSSID/MAC	18b169-c83fc5

File Size Limit: Tap this field to specify a size for the capture file. The default size is 1 MB, and largest size allowed is 1000 MB. The capture stops when the captured file reaches this size.

When capture is running, the capture screen displays the current file size as data is captured.

Slice Size: Tap this field to select a specific frame slice size or enter a custom value. The Slice Size setting limits how much of each packet is captured. A smaller slice size is useful when you are interested in the packet's header but do not need to see all the payload data. The default is Full Packet.

Wi-Fi Filters

Channel: Tap the channel button to set the channel on which packets are captured.

Channel Width: (Appears only if you select a Channel number in the 5-GHz or 6-GHz band, above channel 14). Tap to select a width of 20, 40, 80, or (for 6-GHz band only) 160 MHz.

BSSID/MAC: Enter a BSSID to capture only packets going to or from the target device.

Control, Data, and Management Frames and Beacons: All frame types are captured by default. Tap the toggle button for each frame type to disable its capture.

Running and Viewing Captures

To start Capturing, tap **START** at the top of the app screen.

The current Status of the capture and any applied filters are shown under the capture type. The image above indicates that the app captures traffic for IP 10.200.72.19 only.

The Capture screen shows the real-time status of the capture as it runs.

Wi-Fi captures graph the Management, Control, and Data Frame Types.

In the test shown above, the app has captured all three Wi-Fi Frame Types on channel 6 with the BSSID shown. The Total measurements in the table below the graph represent all frames

seen, while the Captured frames are those that fall within the filter parameters.

- If you navigate away from the Capture app, the capture process continues to run in the background until the File Size Limit (see [Capture Settings](#)) is reached.
- A capture also stops if you open the Wi-Fi app (which initiates scanning) or if you connect to a Wi-Fi network using AutoTest.
- To pan and zoom on the graphs, you can swipe, double tap, and move the slider. See the [Trending Graphs](#) topic for an overview of the graph controls.
- Tap **STOP** to stop the running capture before it reaches the File Size Limit.

Once a capture is completed, the **Save Capture** dialog appears automatically.

Tap the Save icon  to reopen this dialog.

Save Capture

File Name

North Office

[CANCEL](#) [SAVE AS](#) [SAVE](#)

Captures are saved as .pcap files. Tap any of the fields in the dialog to enter changes.

File Name: Capture files are automatically named using the date and time. Tap this field to enter a custom name.

Save to: By default, capture files are saved in the **Downloads** folder in the AirCheck G3 file system. You can also save them to a USB storage device or choose a different folder by tapping the **Save to** field. See also [Managing Files](#).

Save to Link-Live: You can also upload capture files to [Link-Live](#) and then download them for analysis on a PC. Capture (.pcap) files appear on the Uploaded Files  page in Link-Live.

Comment: This comment is attached to your capture file when it is uploaded to Link-Live.

Job Comment: This is the persistent [Job Comment](#) that uploads to Link-Live with all test results and files, until you change it. Changing the Job Comment here changes it throughout your unit.

Discovery App

The Discovery application creates an inventory of the devices on your networks along with their attributes: device types, names, addresses, interfaces, VLANs, resources, and other connected or associated devices. The app allows you to identify and analyze network devices and acts as a jumping-off point for further analysis using other apps, such as Wi-Fi, Path Analysis, and connection tests.

Discovery Chapter Contents

This chapter describes how the Discovery process and app screens work, shows examples of Discovery data, and details the Discovery settings.

[Introduction to Discovery](#)

[Main Discovery List Screen](#)

[Discovery Details Screens](#)

[Device Types](#)

[Device Names and Authorization](#)

[Discovery Settings](#)

[Problem Settings](#)

[TCP Port Scan Settings](#)

Introduction to Discovery

Discovery uses Wi-Fi to find, classify, and display the details of network components. Information provided by Discovery can include the following:

- IP, BSSID, and MAC addresses
- Device Names
- Device Connectivity
- SNMP Data
- Network Problems
- Interface Details and Statistics

Devices are discovered via ARP and Ping sweeps; SNMP, DNS, mDNS, and netBIOS queries; and passive traffic monitoring. Discovery classifies each device as it is found. Up to 2,000 devices can be reported.

The Discovery app also detects **Problems** with discovered devices, including **Warning** and **Failure** conditions.

The AirCheck G3's discovery process begins when the unit is powered on. Once a network

connection ([Wi-Fi, test or management](#)) is established, the active discovery process begins.

Discovery notification icons  indicate the progress of active discovery. This icon  indicates that no links are currently available for active discovery, either because none of the ports enabled for discovery are connected or because AutoTest is running.

The Discovery app consistently monitors network traffic, but the active discovery process reruns every 90 minutes by default. You can select a different Refresh Interval in the [Discovery Settings](#).

Main Discovery List Screen

The main Discovery screen lists all the devices the AirCheck G3 has discovered.

Discovery (14)		
  Name		
 Angela's AirCheck G...	192.168.0.107	>
Angela's AirCheck G3 - 55011C	NetAlly-55011d	
 192.168.0.1	192.168.0.1	>
192.168.0.1	D-LinkIn-4cc988	
 192.168.0.100	192.168.0.100	>
192.168.0.100	SamsungE-6c82d0	
 ARRISGro:c863fc-5b4f39	--	>
ARRISGro:c863fc-5b4f39	ARRISGro-5b4f39	
 ecobee:446132-3e1e66	--	>
ecobee:446132-3e1e66	ecobee-3e1e66	
 Google:28bd89-e41538	--	>
Google:28bd89-e41538	Google-e41538	
 Google:703acb-6be549	--	>
Google:703acb-6be549	Google-6be549	
 localAdm:4ad0a7-1bd5aa		

Like in AutoTest and other AirCheck G3 screens, the icons in Discovery change color to indicate a **Warning** or **Failure** condition. Discovery also displays device icons in **Blue** to indicate Problem-related information that does not constitute a warning or failure, and **Green** to indicate that a previous Problem has been resolved. (See the [Problem Settings](#) to adjust enabled Problems and thresholds.)

The Discovery screen, and other app screens with long lists, supports fast scrolling. Touch and drag the scrollbar handle to the right of the list to scroll quickly up and down.

From the main Discovery screen, you can filter and sort the listed devices, open the left side

navigation drawer to configure settings, and tap a device's card to view its details.

The screenshot shows the Discovery App interface with several annotations:

- Total number of discovered devices:** A yellow box pointing to the text "Discovery (589)" in the header.
- Discovery Settings:** A yellow box pointing to the hamburger menu icon in the top left.
- Refresh Discovery:** A yellow box pointing to the "Refresh Discovery" button in the top right.
- Filter:** A yellow box pointing to the funnel icon in the top left of the device list.
- Sort:** A yellow box pointing to the "Name" header in the device list.
- Touch a card to view device details:** A yellow box pointing to the "Angela's EtherScope ..." device card.

The device list contains the following entries:

Name	IP Address	Details
AndroLinkSysWav	10.250.2.147	kin-454655
Andromeda Automati...	10.250.3.224	HP-235cc0
Angela's EtherScope ...	10.250.2.139	NetAlly-530000
Cetus	10.250.2.166	Dell-faa680
Cisco2500WLC	10.250.3.235	Cisco-556c80
cos-lab-ad.netally.eng	-	VMware-678cc2
COS_DEV_SW4	10.250.0.4	Dell-b63fb6
cos_dev_sw27_huawei	10.250.0.12	

Discovery List Cards

The information displayed on each device card varies depending on the selected Sort element and the data the AirCheck G3 was able to discover.

The lower left field displays the characteristic by which the Discovery list is currently sorted. In the image above, the list is sorted by MAC address. See [Discovery Sorts](#) in this topic for more about sorting.

Searching the Discovery List

The main Discovery screen offers a search feature. Tap the search icon  at the top of the

screen to search discovered devices.

Filtering the Discovery List

Tap the filter button  near the top left of the main Discovery screen to set filters that control which devices are displayed in the list.

← Filters	
Device Types (6)	▼
Problems (1)	▼
Authorization (1)	▼
IPv4 Subnets (1)	▼
IPv6 Subnets (1)	▼
SSIDs (21)	▼
Bands (2)	▼
Channels (11)	▼

The Filters screen displays the number of devices or domains discovered for each category. Tap a category name to select filters by checking the boxes. The main Discovery

screen shows only those devices or IDs that fall under your chosen filter parameters.

When filters are selected, those active filters are displayed at the top of the Filters screen.

- Tap the ✕ button to the right of each filter to clear it.

- Tap the clear filter icon at the top right to clear all filters.

After you select a filter, the Filters screen displays results filtered for that characteristic. For example, in the image above, the user has selected the **Network Tools** device type. As a result, only those subnets, addresses, Wi-Fi bands, etc., with a discovered Network Tool remain selectable in the filters list.

Back on the main Discovery screen, the screen title shows the number of filtered devices out of the total discovered devices (in the image above, 152 filtered devices out of 1308 total).

The number of active filters displays to the left of the filter icon (3 active filters in the image above).

Sorting the Discovery List

Tap the Sort bar or down arrow to open the Sort drop-down menu.

Select a Sort option to order the devices based on your selected characteristic.

The selected Sort option displays in the Sort bar above the device list, and the sort characteristic for each device is shown under the device type icon. In the image above, all the devices associated with the "NSVisitor" SSID are sorted together. Individual devices on the same SSID are sorted numerically and alphabetically.

Tap the sort order icon  to switch the sort order between normal and reverse order.

Devices are sorted in groups. Those with resolved names appear at the top (in normal order), and then devices with only IPv4, IPv6, and MAC addresses appear below, respectively.

Reversing the normal sort order reverses the devices within the groups but does not change the order of the groups.

Security Auditing – Batch Authorization

Batch Authorization lets you extend filtering to organize devices into the following security categories:

- **Authorized:** For devices approved for use on your network
- **Neighbor:** For devices owned and controlled by neighboring organizations
- **Flagged:** To give visibility to a specific device
- **Unknown:** For devices that have not been identified or classified
- **Unauthorized:** For devices that should not be on the network and may present a security risk
- **Unspecified:** Default unassigned Authorization status

Once categorized, it is simple to immediately identify any new devices on the network by filtering according to Authorization type. New devices are identified as Unspecified.

To use the Batch Authorization feature, create a filter that identifies the devices you want to categorize. For example, you could filter on SSIDs used by other offices in your building. After you filter the list of discovered devices, select the overflow menu.

Select **Set Authorization** to see how these devices are currently categorized and the number of devices in each category. In the example below, 38 devices belong to other offices and have an Unspecified authorization.

Set Authorization

38 of 226 devices selected

- ☐ Authorized (0)
- ☐ Neighbor (0)
- ☐ Flagged (0)
- ☐ Unknown (0)
- ☐ Unauthorized (0)
- ☒ Unspecified (38)

CANCEL

OK

NOTE: The initial selection on this screen defaults to the category with the highest count. If other categories have non-zero counts, select **OK** to change the authorization settings for all devices to the selected category.

Select the appropriate security category. To continue the example above, you can select **Neighbor**, and then tap the **OK** button to identify the Unspecified devices from other offices as Neighbor.

Set Authorization

38 of 226 devices selected

☐ Authorized (0)

☒ Neighbor (38)

☐ Flagged (0)

☐ Unknown (0)

☐ Unauthorized (0)

☐ Unspecified (0)

CANCEL OK

You can [filter](#) the list by tapping the Filter icon , tapping **Authorization**, and then tapping

Neighbor to show only the Neighbor devices. You can also [sort](#) the list by Authorization to display the discovered devices with the Neighbor category clearly identified.

Discovery (79/276)		
1	Authorization	
 AIR-CAP3702I-CO	Neighbor	Cisco-000d53
 AirCheck_G3_5500c4	Neighbor	10.250.2.236 TRENDnet-eb8c72
 BlackForestMist-Garage	Neighbor	Mist-dd6dd2
 den-colspr-ap2	Neighbor	ExtremeN-01bae5
 AmazonTe:dc91bf-938721	Neighbor	AmazonTe-938721
 Apple:6c7e67-d13251	Neighbor	Apple-d13251
 Apple:88665a-496103	Neighbor	Apple-496103

See [Assigning a Name and Authorization to a Device](#) for more information on the Authorization feature.

NOTE: Batch Authorization operates on the default MAC address of a device. If a device has multiple MACs, authorization is set only on the default MAC address. Devices that do not have a discovered MAC address, such as unknown switches and off-net devices, cannot have an authorization setting.

Refreshing Discovery

Tap the action overflow icon  at the top right of the main Discovery screen, and select **Refresh Discovery** to refresh the active Discovery process.

Refresh Discovery

REFRESH DISCOVERY

CLEAR AND RERUN DISCOVERY

CANCEL

REFRESH DISCOVERY restarts the active discovery process without clearing the already discovered devices.

CLEAR AND RERUN DISCOVERY clears the accumulated results and restarts the discovery process.

Uploading Results to Link-Live

Tap the action overflow icon  at the top right of the main Discovery screen, and select **Upload to Link-Live** to send the current Discovery results to the Analysis page  on Link-Live.com.

**Link-Live**

MAC: Ntgear:78d294-c0e607
Attributes: Discovered via SNMP, Transparent Switch

 **Addresses** 2 >
IPv4: 1 IPv6: 1 MAC: 1

 **VLANs** 3 >
1, 2, 3

 **Interfaces** 15 >
Up: 2 Down: 13

 **SNMP** >
Uptime: 11 weeks 1 day 5 hours 14 minutes

For the Switch screen shown above, Discovery was able to find an IP address but not a name for the switch.

Each Details screen shows additional information about the selected device, any Problems detected by the AirCheck G3, and counts for other connected or corresponding network elements.

Each Details screen also has a FAB button that lets you take additional actions or run other applications on the device. The available actions and applications depend on the device type and connection available. See [Discovery App Floating Action Menu](#) for more information.

See [Device Types](#) for specifics about the different devices the AirCheck G3 can discover.

Top Details Card

The top card on the Details screen summarizes the discovered data for the selected device.

Aruba Test

Wi-Fi Controller

Name

SNMP: Aruba Test

Address

IPv4: 163.166.137.19 (Unassociated)

MAC: Aruba:186472-c53dda

Nearest Switch: [163.166.136.236](#)

Port: g1

Protocols: Statically Configured Router

Services: DHCP Server

The top of the card shows the device type(s) and icon (a Wi-Fi Controller with a **Failure or Error** status in the example image above).

The rest of the fields that appear on the top Details screen card depend on the device type and what the AirCheck G3 can discover about the device.

On the Discovery Details screens, you can tap any [blue linked name or address](#) to open a Discovery or Wi-Fi Analysis screen for the linked device.

NOTE: Non-underlined links open in the same app (in this case Discovery), and [underlined links](#) open in a different app (in this case Wi-Fi) .

 **Discovery**

 **Cisco3702**

Lightweight AP

Name
AP: Cisco3702
SNMP: Cisco3702

Address
IPv4: 10.250.3.69 (Reachable)
IPv6: 2001:c001:c0de:500:ba38:61ff:fe6e:1ae0
MAC: [Cisco:b83861-6e1ae0](#)

802.11
Channels: 1, 64
Type: 802.11ac

Nearest Switch: ~ [Unknown Switch 3](#) ~

Wi-Fi Controller: [Cisco2500WLC](#)
10.250.3.235

Last Seen: 5:23:20 PM

The linked and underlined Cisco MAC address in the screen image above opens the Wi-Fi app's AP Details screen, where you can view the other

wireless attributes associated with the Lightweight AP. The Nearest Switch and Wi-Fi Controller links open a Discovery app Details screen for those devices.

Data Fields on the Top Details Card

These fields may appear on the top card of a Device Details screen, depending on the device type and the information AirCheck G3 discovered:

Name: Discovered hostname(s) of the device. This section can display user-defined, DNS, mDNS, SNMP, NetBIOS, AP, and Virtual Machine names as discovered.

Address: Discovered IPv4, IPv6, BSSID, and/or MAC addresses of the device. This section displays the default (first discovered) addresses of each type. For more addresses, select the [Addresses](#) card when available.

Authorization: This field shows the user-assigned Authorization status of the device. See [Assigning a Name and Authorization to a Device](#).

802.11: Wireless data

Channels: Wi-Fi channels on which the device is operating

Type(s): 802.11 media type(s) supported by the device

Nearest Switch: Name or address of the switch identified as closest to the device

Port: Physical port where the device is connected

VLAN ID: ID of the VLAN the device is on

Protocols: Routing protocols, discovered via packet analysis, operating on the device or network

Services: Network services provided by this device, such as DHCP or DNS

Attributes: Other discovered attributes about the device

Wi-Fi Controller: Name and address of the Wi-Fi Controller for a Lightweight AP

AP: Access Point to which the device is connected

SSID: Name of the network on which the device is operating

Security: AP's security type

Hypervisor: Name of the hypervisor on which a virtual machine is operating

Virtual Machine: Name of the virtual machine

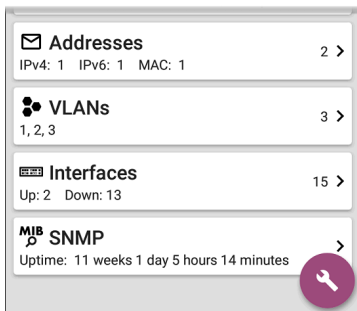

Guest OS: Operating system running on the virtual machine

Memory Reservation: Amount of memory reserved for the virtual machine

Last Seen: Time at which AirCheck G3 most recently detected the device

Lower Cards in Device Details

Tap any of the lower cards on a Device Details screen to view more discovered characteristics and "drill down" to specific Problems, Addresses, Interfaces, etc. for the selected device.

Screens with a list, such as Addresses shown below, also offer Sort options.

Problems

The Problems card shows the icon color of the highest severity problem, and the number of detected **Warning**, **Failure or Error**, **Information**, and **Resolved** conditions for the device or network component.

Tap the Problems card to view the Problems list screen (unless only 1 Problem is detected, in which case, the detailed Problem description opens, skipping the list screen).

☰	Problems (2)	⋮
⌄	Severity	▼
⚠	Half duplex interface: Et0/0	11:33:51 AM >
⚠	Half duplex interface: Et0/1	11:33:51 AM >

Tap the sort field to sort the list by **Severity** or by the time when the problem was **First Detected**.

On the Problems list screen, tap a Problem's row to read a detailed description.

Problems - COS_DEV_TS...

Half duplex interface: Et0/0

First Detected: 11:33:51 AM

Problem Description
 The analyzer has discovered one or more interfaces on a device configured to use half duplex mode as opposed to full duplex.

Problem Analysis
 Half-duplex communication creates performance issues because data can flow in only one direction at a

To clear a problem, tap the action overflow button  at the top right of the Problem list or description screen, and then tap **Clear Problem**.

See [Problem Settings](#) to select which problems are detected and displayed by your unit.

Addresses

Addresses

3 >

IPv4: 1 IPv6: 2 MAC: 1

The Addresses card displays the number of each type of address discovered: IPv4, IPv6, MAC, and/or BSSID. Tap to view the addresses and related information.

 Addresses (3)		
 Address 		
IPv4	10.250.0.120	10.250.0.0/22 >
	10.250.0.120	Dell-3b5649
IPv6	2001:c001:c0de:500:1618:77f...	>
	2001:c001:c0de:500:1618:77ff:fe3b:...	Dell-3b5649
IPv6	fe80::1618:77ff:fe3b:5649	>
	fe80::1618:77ff:fe3b:5649	Dell-3b5649

From the Addresses list screen, you can sort the list order and tap any of the discovered addresses to investigate the address further.

TCP Port Scan

If you have run a TCP Port Scan (from the [Discovery FAB](#)) on a device or IP address, a TCP Port Scan card appears on the device's Details screen.

This card lists open port numbers and shows the total quantity of open ports. Tap the card to open the TCP Port Scan screen.

You can also open this screen from the [Discovery floating action menu](#).

 TCP Port Scan START 

 HNT_QA_Prod_Temp

IP Address: 172.24.0.21
Interface: Wired Port
Scan List: 1-2049, 3268-3389, 3535, 5000-6005,
8008-8443

Results
Status: Completed

Port	Description
23	telnet
80	www-http

The top of the TCP Port Scan results screen shows the name or IP address of the tested device and the following fields:

IP address: IP address of the device that was scanned

Interface: Test or management port from which the test ran, set in the [TCP Port Scan settings](#)

Scan List: List of port numbers tested

Results

Status: Current status of the port scan

Port/Description: List of all the detected open ports with their descriptions

See also [TCP Port Scan Settings](#).

VLANs

The VLANs card displays the VLAN IDs this device is using or for which it is configured.

This card does not appear if no VLANs are detected or configured. Tap the card to open the VLANs screen.

 **COS_DEV_SW33**

 **VLANs**

VLAN	Description
1	default
444	VLAN0444
500	VLAN0500
508	LabWiFi
666	VLAN0666
1002	fddi-default
1003	token-ring-default
1004	fddinet-default
1005	trnet-default

The VLANs Details screen also shows the description with each VLAN ID.

Interfaces

Interfaces are discovered using SNMP.

 **Interfaces**

Up: 20 Down: 151

171 >

The Interfaces card shows the number of Up and Down interfaces and the total number of Interfaces to the right.

Tap the card to view the list of Interfaces.

Interfaces (171)		
Interface Status		
↑ VLAN-1002 Status: up	0 b VLAN: 1002	>
↑ VLAN-1003 Status: up	0 b VLAN: 1003	>
↑ VLAN-1005 Status: up	0 b VLAN: 1005	>
↓ Fa1 Status: down	100 Mb VLAN: --	>
↓ Gi1/3 Status: down	1 Gb FDx VLAN: 1	>

Like other Discovery list screens, the Interfaces list provides a number of Sort options, and the selected sort option affects the type of information displayed. The image above shows Interfaces sorted by Status (up or down). The image below shows Interfaces sorted by MAC Address, so each Interface's MAC address is displayed.

Interfaces (10)			
MAC Address			
↑ Et0/0	10 Mb HDx	>	
0009b7-fa7660	VLAN: --		
↑ Et0/1	10 Mb HDx	>	
0009b7-fa7661	VLAN: --		
↑ Et0/1.500	10 Mb	>	
0009b7-fa7661	VLAN: --		
↑ Et0/1.522	10 Mb		

Tap an Interface row to open a new Discovery Details screen for that Interface.

 **COS_DEV_TS01.cos.net...** 

 **Et0/1**
DOT1Q Trunk to CISCO_3750_PoE COS_DEV_SW2 f...
Status: up
Speed: 10 Mb

Compiled Wed 12-Jul-17 14:36 by

SNMP

Type: SNMP v1/v2/v3

Engine ID: 80000009030068efbd6f4b80

Communication: SNMP v2

Using: Default Community String: public

SNMP System Group: These data fields are gathered from the system group and other key device version information.

SNMP: SNMP versions the device supports, Engine ID (for v3), and how the AirCheck G3 is currently communicating with the device, along with credentials, including the Community String in use.

Connected Devices

The Connected Devices card appears on the Details screen for [Unknown Switches](#). While the AirCheck G3 may be unable to directly identify the connected switch, the devices connected to it provide clues about where the switch is operating.

A screenshot of a UI card titled "Connected Devices". The card has a light gray background and a thin gray border. On the left side, there is a small icon of a laptop. The text "Connected Devices" is displayed in a bold, dark gray font. On the right side, the number "8" is followed by a right-pointing chevron symbol ">".

 **Connected Devices**

8 >

The Connected Devices card shows the number of discovered devices that are connected to the Unknown Switch. Tapping the card opens a Discovery list screen with the connected devices.

Connected Devices (8)		
	IP Address

10.250.3.32	NetAlly-0210...	

Resources

Resources
>

CPU: 28% Memory: 35%

The Resources card shows the percentages of CPU, memory, and storage usage on the device. This information is gathered via SNMP.

Tap the card to view current and maximum resource utilization measurements.

COS_DEV_SW34		
 Resources		
	Cur	Max
CPU %	12	12
Memory %	60	60
Last Update: 1:44:22 PM		

By default, AirCheck G3 displays a **Warning** condition if CPU, Memory, or Storage utilization is above 90%. You can adjust problem detection and thresholds in the [Problem Settings](#) accessed from the Discovery [navigation drawer](#).

SSIDs

The SSIDs card appears in the Details for [Wi-Fi Controllers](#). This information is gathered via SNMP.

 SSIDs	16 >
--	------

This card shows the number of SSIDs gathered from SNMP. Tap the card to view the list of SSIDs.

Cisco2500WLC		
SSIDs		
SSID	Security	VLAN
✓ CiscoQATest-maana	WPA2-P, WPA-P	--
✓ Cisco WEP64 OA	WEP	--
✓ aa-Cisco-Wep	WEP	--
✓ aonly	WPA2-P, WPA-P	--
✓ Cisco ISE	WPA2-E	--
✓ RF Chamber	WPA2-P, WPA-P	--
✓ Lobo	WPA2-P, WPA-P	--
✓ COS Cisco Captive Portal	Web	--
✗ Portal Test	Web	--
✓ [Cisco Hidden]	WPA2-P	--
✓ Cisco 2.4G	WPA2-P	--

On the SSIDs screen, each SSID is shown with its Security type(s) and any VLANs. SSIDs with a checkmark to the left are enabled, and those with an ✗ are disabled.

Discovery App Floating Action Menu

The floating action button (FAB) on Details screens offers additional actions depending on the device type and connection available.

Opening other NetAlly apps, such as [Path Analysis](#), [Ping/TCP](#), or [Capture](#)

from a Details screen auto-populates the new app with the device's name and/or address. In this way, both the Discovery and [Wi-Fi](#) apps provide a helpful shortcut that avoids making you retype the target addresses or hostnames in other testing apps.

- Tap **TCP Port Scan** to open the [TCP Port Scan screen](#) in the Discovery app.
- Tap **Browse** to open the Chromium browser.

- Tap **Add Test Target** to create a new AutoTest target matching the currently selected device. A dialog first displays to select the test type, then the AutoTest app opens, displaying the newly added target's settings. You can then further customize the target.
- For devices with a MAC address or BSSID, tap **Name** and **Authorization** to open a dialog that lets you assign a custom user name and Authorization status. See [Assigning a Name and Authorization to a Device](#) in the Wi-Fi app chapter.
- Tap **More** to open a secondary list of floating action buttons:
 - Tap [Telnet or SSH](#) to open the JuiceSSH app.
 - Tap **Back** to return to the primary FAB list.

Auto-Populating Device Addresses

When another app is opened from the FAB, the default address and name shown on the [Top Details Card](#) are the targets populated.

For example, the Router shown in the Details screen below has multiple IPv4 and MAC addresses (which can be viewed by tapping the Addresses card).

 **Discovery**

 **Rack5SW1.fnet.eng**
Router
Name
SNMP: Rack5SW1.fnet.eng
Address
IPv4: 10.250.3.207 (Reachable)
MAC: Cisco:00141c-8945c1
Nearest Switch: [COS_DEV_SW1](#)
Port: Gi2/0/39
Protocols: Statically Configured Router
Attributes: Discovered via SNMP, Transparent Switch

 **Addresses** 6 >
IPv4: 6 MAC: 5

 **VLANs** 66 >
1, 2, 21, 42, 78, 85, 154, 202, 236, 378, 478, 5...

 **Interfaces** Up: 12 Down: 30 

When you open the FAB and select a different app, such as Path Analysis, only the address and name listed at the top of the Details screen are populated in the Path Analysis app.

To open another screen or app with a different address, open the Addresses card, and select another address to view its Details screen.

Device Types

The Discovery app lists and analyzes the types of devices explained in this section. Different data may be available to the AirCheck G3 depending on the device type, how it was discovered, and your configured settings.

See [Discovery Settings](#) for [SNMP Configuration](#) and [Devices Discovered Through Other Devices](#) options.

For descriptions of the different Details cards and screens, see [Discovery Details](#).

The images in the rest of this section show examples of data that Discovery may display for each device type.

Routers

AirCheck G3 discovers IP routers by monitoring traffic and querying hosts.

 **Discovery**

 **COS_DEV_SW34**
Router
Name
SNMP: COS_DEV_SW34
Address
IPv4: 10.250.0.34 (Reachable)

 **Interfaces** 171 >
Up: 20 Down: 151

 **SNMP**

Switches

Switches are also discovered by monitoring traffic and querying hosts.

 **Discovery**

 **cos-dev-sw18-poe**
Switch
Name
SNMP: cos-dev-sw18-poe
Address
IPv4: 10.250.3.216 (Reachable)
MAC: Cisco:503de5-220c43
Attributes: Discovered via SNMP, Transparent Switch

 **Addresses** 2 >
IPv4: 2 MAC: 2

 **VLANs** 37 >
1, 11, 196, 500, 502, 504, 508, 510, 511, 518, ...

 **Interfaces** 38 >
Up: 9 Down: 29

 **SNMP**
Uptime: 27 weeks 2 days 7 hours 25 minutes 

Unknown Switches

Unknown switches are detected indirectly by analyzing traffic going through surrounding switches. The AirCheck G3 cannot identify the switch, but it can sense where a switch is active on the network via the device MAC addresses in that space.

The AirCheck G3 numbers the switches as they are discovered. (These numbers may change each time the discovery process runs.)

The Unknown Switches Details screen shows the number of devices connected to the switch. Tap the [Connected Devices](#) card to view the connected devices, which may provide clues about the location of the unknown switch.

Network Servers

Network servers include NetBIOS, DHCP, and DNS servers.

Discovery

Device Names and Authorization

Assigning a Name and Authorization to a Device

The Wi-Fi and Discovery apps provide the option to assign a **Name and Authorization** to any discovered device with a MAC Address or BSSID.

Assigning a User Name and/or Authorization status does not change any of the information on the actual device, only how the device's information displays on the AirCheck G3 on which the Name and Authorization are assigned.

You only need to assign a Name and/or Authorization to one BSSID or MAC address for a device with multiple addresses. Names and Authorizations are saved in the internal authname.txt file and remain set as the unit powers off and on.

This feature allows you to quickly identify your known devices and categorize them with the following statuses:

- **Authorized:** For devices approved for use on your network
- **Neighbor:** For devices owned and controlled by neighboring organizations
- **Flagged:** To give visibility to a specific device
- **Unknown:** For devices that have not been identified or classified
- **Unauthorized:** For devices that should not be on the network and may present a security risk
- **Unspecified:** Default unassigned Authorization status

While the Authorization statuses are designed with these intended meanings, you can use them however you like for your purposes.

Once set, the custom User Name is shown in other NetAlly apps wherever device information is displayed. The Authorization is displayed in the Discovery and Wi-Fi apps.

You can sort and filter by the assigned Authorization in the Wi-Fi and Discovery apps. When a list is sorted by Authorization (in normal sort

order), the devices with Authorizations of highest concern appear at the top. The image below shows a list screen sorted this way:

Wi-Fi - BSSIDs (150)			
		Authorization	
	Ntgear:3c3786-719306	-33 dBm	>
Unauthorized	Nighthawk 802.11ax 5GHz	CH: 36	
	Cisco:b83861-84aaf0	-82 dBm	>
Neighbor	Cisco WEP64 SA	CH: 36	
	Cisco:b83861-84aaf0	-67 dBm	>
Neighbor	CiscoQATest-mañana	CH: 1	
	Cisco:78bc1a-0fd908	-64 dBm	>
Authorized	[NGP-004]	CH: 36	

Applying a Name and/or Authorization

Access the **Name and Authorization** function from the floating action menu  on a [Discovery Details screen](#) or a [Wi-Fi Details screen](#) for a [BSSID](#) or [Client](#).

NOTE: When applying an Authorization to a device with multiple BSSIDs or MAC addresses, the Authorization status is only

applied to the MAC address or BSSID displayed on the Details screen, as shown in this section.

1. Tap the **FAB** on a Discovery or Wi-Fi Details screen for a device with a discovered MAC/BSSID.

The example above shows an AP's Details screen in the Discovery app.

2. Select **Name and Authorization** to open the dialog.

Name and Authorization

MAC Address: Cisco:78bc1a-0fd908

User Name: Conference Room AP

Authorization

☒ Authorized

☐ Neighbor

☐ Flagged

☐ Unknown

☐ Unauthorized

☐ Unspecified

[CANCEL](#) [OK](#)

3. In the Name and Authorization dialog, tap the **User Name** field to enter a customized name, if desired. In the image above, the user has entered the name "Conference Room AP."

NOTE: It is possible to *either* enter a user name or select an Authorization. You do not have to do both.

4. Select the radio button to assign an **Authorization** status as needed.
5. Tap **OK** to apply.

Once applied, the User Name and Authorization are displayed on the Discovery Details screen.

 **Discovery**

 **Conference Room AP**

AP

Name
User: Conference Room AP
AP: AIR-CAP3802I-CO

Address

Channel: **9**
Types: n, g, b
Signal: -60 dBm
SNR: 33 dB
Security Type: WPA2-P
Last Seen: 2:30:38 PM

 **Rates and Capabilities** >

 **Clients** 0 >

 **RF and Traffic Statistics** >

NOTE: If different Authorization statuses are assigned for different BSSIDs or MAC addresses on the same device, the Authorization of highest concern appears on the device's Details screens.

Changing or Clearing a User Name or Authorization

Open the Name and Authorization dialog again *for the same BSSID or MAC address* on a device to reassign or clear the assigned User Name or Authorization. If the Name or Authorization do not update as expected after a few minutes, you may have assigned them to multiple addresses for the same device.

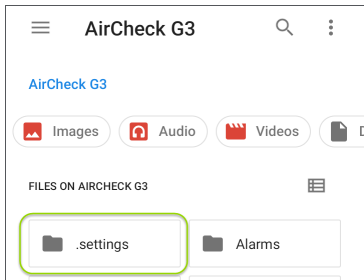

To view all assigned Authorizations for a device, open the Discovery or Wi-Fi Details screen for the device and view the Addresses or BSSIDs screen. Then, sort by Authorization.

Addresses (14)		
Authorization		
 Cisco:b83861-84aaf3	CH: 36	>
Flagged	Cisco WEP128 OA	
 Cisco:b83861-84aaf1	CH: 1	>
Neighbor	Cisco WEP64 OA	
 Cisco:b83861-84aafc	CH: 1	>
Authorized	Cisco WEP128 OA	
 Cisco:b83861-84aaf0	CH: 1	>

To reset a device's User Name and/or Authorization to the unassigned defaults, open the Name and Authorization dialog, clear the User Name field and leave it blank, and select the **Unspecified** Authorization. Then, tap **OK**.

Revising or Importing authname.txt

Custom Names and Authorizations are stored in the **authname.txt** file in the AirCheck G3's internal storage **.settings** folder, accessible from the [Files](#) app.

If desired, you can manually edit this file on the AirCheck G3 unit, or you can create a new authname.txt file on a PC and import it onto your unit in the same file location. (You can also push authname.txt files from [Link-Live](#) to your test unit.)

NOTE: Your AirCheck G3 can parse ? wildcard characters in the authname.txt file (although * wildcard characters are not allowed).

The default authname.txt file on your unit contains instructions on how to format your Name and Authorization entries:

- Each line defines one MAC/BSSID in the format:
MAC/BSSID, [Authorization][, Customized Name]
- Authorization is case insensitive and can be one of these strings:
 - Authorized
 - Neighbor
 - Flagged
 - Unauthorized
 - Unknown
 - Unspecified (or blank)
- You can substitute a question mark ? for a MAC digit to match any value for that digit.

A sample authname file could look like this:

```
00c017-330ea3, Authorized, iPerf3-
server
bc:e9:2f:41:df:b4, Authorized, HP-
Deskjet
b827eb-??????, Unauthorized,
Raspberry-PI
7c:10:c9:?:?:?:?:?, Neighbor, ASUS-
```

AP

18b169-c84600, Flagged, Who is this?

The line 18b169-c84600, Flagged, Who is this? would result in a Discovery details for the device as follows:

 Who is this?	-38 dBm >
Flagged	Sonicw

To edit the authname.txt file on the AirCheck G3, third-party apps, such QuickEdit Text Editor, are available from the NetAlly [App Store](#) .

For help importing a file, see the [Managing Files](#) topic.

NOTE: After importing and overriding the authname.txt file, NetAlly recommends [Refreshing Discovery](#) in the Discovery app or restarting your unit.

Discovery Settings

Discovery configurations include SNMP settings, Community Strings and the order in which they are used, Credential Sets, Ports, Extended Ranges, and process intervals.

Access the Discovery settings screen by sliding out the left-side [navigation drawer](#) or tapping the menu icon , and selecting **Discovery Settings**.

Discovery

Discovery Settings

Problem Settings

TCP Port Scan Settings

General Settings

Feature Access

About

(Tap here to skip to [Problem Settings](#), [TCP Port Scan](#), or back to [General Settings](#).)

Discovery Settings	
Active Discovery Ports	All
Extended Ranges	>
0 Extended Ranges	
ARP Sweep Rate	100/second
Refresh Interval	90 minutes
SNMP	>
SNMPv1/v2: Enabled, SNMPv3: Enabled	
AP Grouping Rules	>
6 AP Grouping Rules	

To adjust Discovery Settings:

1. On the **Discovery Settings** screen, tap each field described in this topic, as needed, to

select or enter your required configuration elements.

2. When you finish configuring, tap the back button  to return to the main [Discovery List screen](#).
3. Then, [Refresh Discovery](#) from the action overflow menu  to apply the new configuration.

You can load, save, import, and export configured Discovery settings by tapping the save button  on this screen.

- **Load** opens a previously saved Discovery configuration.
- **Save As** saves the current configuration with an existing name or a new custom name.
- **Import:** Import a previously exported settings file.
- **Export Selected** or **Export All:** Create an export file of current settings, and save it to internal or connected external storage.

See [Managing Testing App Settings](#) for more instructions.

After you have saved a configuration, the custom name you entered appears in the title of the Discovery Settings screen. In the image below, a user has saved a custom configuration named "South Campus," which replaces the "Discovery Settings" screen title.

Active Discovery Ports

Tap **Active Discovery Ports** to select which port Discovery uses to gather data. (Discovery uses all of the ports by default. Uncheck them to limit which ports are used.) Discovery runs through the enabled ports only if an active network link is available. See [Selecting Ports](#) for explanations of the different ports.

Extended Ranges

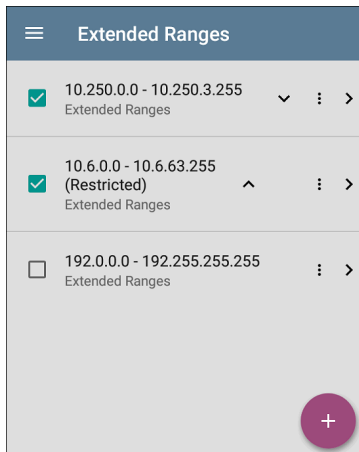

The Extended Ranges screen allows you to enter addresses of non-local subnets on which you want the Discovery process to run. Discovery sweeps all of the enabled Extended Ranges for devices, whether directly connected or off-net. The AirCheck G3 performs Ping sweeps on subnets that are not directly connected and ARP sweeps on connected subnets.

When the SNMP agents are on a subnet that is separate from the hosts (PC's and servers) subnet, additional networks must be configured for discovery:

- The network address of the remote subnet you want to discover, meaning the host (PC and server) network.
- The network address of the switch and router SNMP agents in the remote subnet, e.g. a management subnet.

Configure both **SNMP Credential Sets** and **Extended Ranges** to ensure that the AirCheck G3 always discovers management subnets, regardless of your network port connections.

Tap the field to open the Extended Ranges list screen.

- Check or uncheck the boxes to include or exclude an extended range from the current Discovery configuration. Unchecked Extended Ranges do not affect the default Discovery behavior in the current

configuration, but they may be used in other Discovery configurations (like Community Strings and Credentials).

- Tap any Extended Range's row to edit its address and subnet.
- Tap the FAB  to add new extended ranges.

Range	
Active	<input checked="" type="checkbox"/>
Subnet will be included in Discovery	
Address	10.250.0.0
Subnet Mask	255.255.252.0 /22

Active vs. Restricted Subnets

For each configured Extended Range, you can tap the toggle button to switch from **Active** to **Restricted**. Discovery is performed on Active Ranges. Setting a Range to **Restricted** disables the discovery process on that network or subnet,

meaning the AirCheck G3 will *not* communicate with devices within the restricted range.

- Restricted Ranges take precedence regardless of the order in which they are listed on the Extended Ranges screen.
- You can Restrict a part of a configured Active Extended Range.
- You can also restrict a single device, whether it is part of an Active Range or not. To enter a single device that you do not want discovered, enter its IP address in the Address field, and set the Subnet Mask field to 255.255.255.255.

Address

Tap the **Address** field to enter or select an IP address range.

Tap the drop-down menu to select a previously Discovered Subnet. The Address field is automatically populated with your selection.

Subnet Mask

Tap this field to select a subnet mask. If you select an already Discovered Subnet, the Subnet Mask is also pre-populated.

ARP Sweep Rate

Tap the ARP Sweep Rate field to select a rate between 5 and 100 ARP requests per second.

This setting can prevent the AirCheck G3 from shutting down ports that sense too many ARPs being sent.

Refresh Interval

This setting controls the time between runs of the Discovery process. By default, Discovery runs every 90 minutes. Tap the **Refresh Interval** field to select a different interval, up to 8 hours.

The **Manual** option turns off regular automatic Discovery, and the process refreshes only if you

select **Refresh Discovery** from the main Discovery list screen.

SNMP Configuration

The MIB (Management Information Base) of SNMP managed devices contains information such as device configuration, interface configuration and statistics, SNMP tables (like host resource and route tables) and VLAN details. Through the Discovery process, the AirCheck G3 interrogates MIBs to determine the device type, ports, connected subnets, and other data.

SNMP credentials are required to communicate with the SNMP agents on your interconnect devices, such as switches and routers. The Discovery Settings allow you to enter the SNMP community strings and credential sets the AirCheck G3 uses to communicate with those devices.

SNMPv1/v2

Tap the toggle button to enable or disable SNMPv1 and v2 queries. This setting is enabled

by default and uses the Community Strings configured in the next setting.

Community Strings

Tap this field to open the Community Strings list screen and add, edit, or remove community strings.

The AirCheck G3 uses the checked strings in the order shown on this screen. If it does not receive a response from the queried device using one string, it sends the next string.

NOTE: This screen and others in the Discovery settings operate much like the [AutoTest Profile Group screen](#).

On the Community Strings screen, you can perform these actions:

- Check or uncheck the boxes to include or exclude a string from use in the current Discovery configuration.
- Tap the up and down arrows  to change the order in which the AirCheck G3 uses the strings to query a device.
- Tap the action overflow icon  to **Duplicate** or **Delete** a Community String.

CAUTION: Deleting a string removes it from all saved Discovery configurations. To remove a string from the current Discovery configuration only, simply uncheck it.

- Tap the FAB  to add new Community Strings.
- Tap any Community String's row to edit the string and its description.

TIP: To minimize discovery time, uncheck or delete all unused community strings, as every failed query extends the discovery time. You can also arrange the community strings in the order they are used most.

SNMPv3

Tap the toggle button to enable or disable SNMPv3 queries. This setting is enabled by default and uses the Credentials configured in the next setting.

NOTE: If this setting is enabled, but no SNMPv3 credentials are configured, the AirCheck G3 discovers the engine IDs of all SNMPv3 agents. This is a good way to discover if a device supports SNMPv3.

Credentials

Tap this field to open the Credentials list screen.

This screen interface works like the Community Strings screen above. AirCheck G3 uses the Credentials in the order shown.

- Check or uncheck the boxes to include or exclude a set of Credentials from use in the current Discovery configuration.
- Tap a row to edit its credentials.

- Tap the FAB  to add new credentials.

☰ Credential Sets
Name Default Name
Username
Authorization Type None
Authorization Password
Privacy Type None
Privacy Password

On the Credentials Sets screen, tap each field to select or enter the credentials required.

Name

Tap the **Name** field to enter a custom name for the Credential Set.

Username

Tap to enter the SNMPv3 username.

Authorization Type and Password

AirCheck G3 Discovery supports two SNMPv3 Authorization types: HMAC-SHA and HMAC-MD5. If Authorization is required, enter the appropriate password.

Privacy Type and Password

AirCheck G3 Discovery supports four Privacy Types: CBC-DES, AES-128, AES-192, AND AES-256. If needed, enter the appropriate Privacy Password.

SNMP Query Delay

This function controls how long your AirCheck G3 waits between SNMP queries to key tables that can cause CPU spikes in the SNMP agents, including the ARP cache, IP address table, routing tables, and FDB tables.

The default SNMP Query delay is No Delay. When querying the key large tables, the AirCheck G3 asks for more data as soon as a response has

been received. You can select a 1 or 5 second delay if needed.

Devices Discovered Through Other Devices

By default, AirCheck G3 discovers devices from SNMP tables of other devices. If you do not want Discovery to automatically find devices from SNMP tables of the device types listed here, you can uncheck their boxes.

Devices Discovered Through Other Devices

- ☒ Routers and Subnets
- ☒ Switches
- ☒ VoIP Devices
- ☒ Wi-Fi Clients
- ☒ Virtual Machines

CANCEL

OK

Routers and Subnets

When the Routers and Subnets checkbox is enabled, any discovered routers are included in discovery results. In addition, if Discovery has SNMP access to a discovered router, its routing tables are read, and the next hop routers are added to the Discovery list. If any local subnets are available in the routing tables, these are also added to the Subnets list. This process continues until all the available SNMP credentials are tried for the added routers.

NOTES: Discovery does not sweep every discovered subnet; discovered subnets are only added to the subnets list. To perform discovery in a specific subnet, see **Extended Ranges** above.

If another site has routers you want to discover using this process but there isn't a local next hop link from this site, you can add one of the routers of that site to discovery. The process then runs from that router and finds the routers on that site as well. Add the subnet of the router or just the

router's IP address with a mask of /32 to Extended Ranges.

Switches

When the Switches checkbox is enabled, discovery adds any switches that it finds in SNMP neighbor tables of other devices to the Discovery list.

For example, when AirCheck G3 is reading the CDP and LLDP caches of one switch, it contains other switches. If this option is enabled, the AirCheck G3 adds those other switches, even if they are not in discovery ranges.

NOTE: To Discover switches at another site, add one of the switches of that site to Discovery Extended Ranges.

VoIP Devices

When the VoIP Devices checkbox is enabled, discovery adds any VoIP devices that it finds in SNMP tables of other devices regardless of the subnet. These are usually found in the LLDP-MED tables of the switches. Enabling the Switches option provides the best chance of finding all your VoIP devices.

Wi-Fi Clients

When the Wi-Fi Clients checkbox is enabled, discovery adds any wireless clients it finds in SNMP tables of APs and Wireless LAN Controllers. Enabling this option along with Switches provides best chance of finding all Wi-Fi clients.

NOTE: Enabling Wi-Fi Clients here may cause Wi-Fi devices to show in Discovery that do not appear in the [Wi-Fi analysis app](#) because Wi-Fi analysis only shows what it detects on wirelessly transmitted packets.

Virtual Machines

When the Virtual Machines checkbox is enabled, discovery adds any virtual machines that it finds in SNMP tables of other devices. These are usually found in the ESX host > SNMP tables. Adding the subnets of your ESX hosts to Extended Ranges helps with finding your virtual machines.

Device Health Interval

Discovery automatically runs a set of network health tests to search for network Problems,

such as high utilization, discards, or errors on all discovered interfaces and device resources.

The selected time Refresh Interval is the minimum time between each run of the Device Health tests. Tap the field to disable Device Health testing or to change the interval from the default of 10 minutes to 30 or 60 minutes.

Disabling the Device Health testing affects the types of Problems that Discovery can detect.

See also [Problem Settings](#).

Auto AP Grouping Rules

Auto AP Grouping Rules

6 AP Grouping Rules

This feature allows you to adjust the AP Grouping Rules that control how the AirCheck G3 groups BSSIDs with their Access Points, such that they are grouped appropriately for your AP types and environment.

For example, if BSSIDs from different APs are being grouped together inaccurately, you can disable the rule that is causing the grouping. If

your AP manufacturer uses a BSSID variation scheme that is not covered by one of the six default rules, you can add a new rule.

Tap the setting to open the AP Grouping Rules list screen. The image below shows the six default AP Grouping Rules on the AirCheck G3. The **Prefix filters** in all of the default grouping rules are set to 000000-000000.

AP Grouping Rules				
<input checked="" type="checkbox"/>	Grouping 1 FFFFFFFFFFFFC0	▼	⋮	>
<input checked="" type="checkbox"/>	Grouping 2 00FFFFFFFFFFFF	^ ▼	⋮	>
<input checked="" type="checkbox"/>	Grouping 3 FFFFFF0FFFFFFF	^ ▼	⋮	>
<input checked="" type="checkbox"/>	Grouping 4 00FF0FFFFFFFFF	^ ▼	⋮	>
<input checked="" type="checkbox"/>	Grouping 5 0DFFFFFF0FFFFF	^ ▼	⋮	>
<input checked="" type="checkbox"/>	Grouping 6 F0FFFFFFFFFFFF0	^	⋮	>

+

As with other settings list screens, you can enable or disable, add, delete, and edit the grouping rules from this screen.

- Check or uncheck the boxes to include or exclude a rule from use in the current Discovery configuration.
- Tap the action overflow icon  to **Duplicate** or **Delete** a rule.

CAUTION: When you delete a rule, you delete it from all saved Discovery configurations. To remove a rule from those used by the current Discovery configuration, simply uncheck it.

- Tap the FAB  to add a new rule.
- Tap any rule's row to edit it.

AP Grouping Rules	
Name	Grouping 1
Prefix filter	000000000000
Filter mask	FFFFFFFFFC0

Name

If desired, enter a custom name for a default or new rule. If you intend to use a Prefix filter, a best practice would be to name the rule with the AP manufacturer's name.

Prefix filter

Use the **Prefix filter** to create a rule for a specific AP manufacturer's BSSID scheme, meaning a rule for just one AP manufacturer prefix. The default rules all contain a default Prefix filter of 000000-000000.

If a Prefix filter is non-zero, its second and third bytes are compared to discovered BSSIDs before the **Filter mask** (described below) is applied. These two bytes must match exactly, or the two BSSIDs are not grouped together. This behavior allows you to specify a fairly open Filter mask, because the mask applies only to one manufacturer.

For example, you could have Cisco APs with BSSIDs that all start with b83861. By specifying a Prefix filter of 003861-000000, you limit the grouping rule to just those APs.

Filter mask

The Filter mask specifies what parts of the BSSIDs are compared when determining AP groupings.

For example, default **Grouping Rule 1** has a Filter mask of FFFFFFFF-FFFFC0, so any BSSIDs that vary only by the lower six bits are grouped together.

Problem Settings

The Problem settings determine which issues are detected and displayed by *both* the Discovery and [Wi-Fi Analysis](#) apps as well as the thresholds for enabled problems, such as Packet Discards and Utilization.

Access the Problem Settings screen by sliding out the left-side [navigation drawer](#) or tapping the menu icon  in the Discovery app, and selecting **Problem Settings**.

Problems are categorized as Network, Wi-Fi, or Security.

NOTE: The Wi-Fi Problems configured here also control the [Problems](#) detected and displayed in the [Wi-Fi Analysis](#) app.

As with [Discovery Settings](#), you can save, load, import, and export configured Problem Settings by tapping the save button  on this screen. See [Managing Testing App Settings](#) for more instructions.

Tap the row for each to enable or disable the problem types and set thresholds where applicable.

Network Problems		
Bad Subnet Mask Enabled		
Duplicate IP Address Enabled		
Max Clients on SSID Enabled		
High Interface Utilization Enabled		

All Problem types are enabled by default. Tap the toggle button to the right to disable each one.

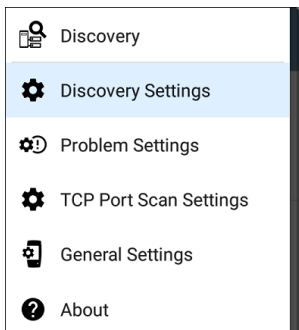

- Tap the red  or yellow  information icons to the right of each Problem to read a detailed description and recommended actions.
- **Red** icons indicate Failure conditions.
- **Yellow** icons indicate Warning conditions.

When you finish configuring, tap the back button  to return to the main Discovery screen.

TCP Port Scan Settings

The TCP Port Scan feature checks for open ports on the current device. To run scan, tap the **FAB** on the **Discovery Details** screen, and then tap **TCP Port Scan**. The AirCheck G3 scans many ports simultaneously and reports the open port's numbers.

Access the TCP Port Scan Settings by sliding out the left-side **navigation drawer** or by tapping the navigation menu icon , and then selecting **TCP Port Scan Settings**.

This displays the TCP Port Scan Settings screen.

TCP Port Scan Settings	
Interface	Any Port
Scan List	1-2049, 3268-3389, 3535, 5000-6005, 8008-8443
Timeout Threshold	1 s

Interface: Tap the field to select the AirCheck G3 port from which the port scan runs. (See [Selecting Ports](#) for explanations of the different ports.)

Scan List: Tap this field to edit the list of port numbers that get tested during the port scan. You can enter port numbers or ranges, separated by commas.

Timeout Threshold: Tap this field to select a value for how long the AirCheck G3 waits for a response from each port or to enter a custom value. The scan ends after all the ports in the Scan List have had this amount of time to

respond, and then the results screen lists the ports that responded within the threshold.

See also the [TCP Port Scan results card and screen](#).

Wi-Fi Analysis App

The Wi-Fi Analysis app scans the wireless channels in your environment to discover and gather data about the devices and traffic on your Wi-Fi networks. Wi-Fi discovery begins when you power on the AirCheck G3, and measurements update with each channel scan cycle.

The AirCheck G3 supports 802.11a/b/g/n/ac/ax technologies. AirCheck G3 can also detect and indicate the 802.11be media type (known as Wi-Fi 7) being used on APs and Clients, as reported in the wireless management frames.

The Wi-Fi app features separate screens that list and display characteristics of the different devices and elements of your wireless environment. Tap a link below to go directly to the description of the screen listed:

- [Channels Map](#)
- [Channels](#)
- [SSIDs](#)
- [APs](#)
- [BSSIDs](#)
- [Clients](#)
- [Bluetooth](#)

Wi-Fi Analysis and Discovery

Wi-Fi Analysis uses the [Wi-Fi Test Port](#) to scan the channels and acquire information about your wireless networks. If the Wi-Fi Test Port is linked (for instance after running a [Wi-Fi AutoTest Profile](#)), the port unlinks and resumes scanning when you open the Wi-Fi Analysis app.

When AirCheck G3 links to a network, Discovery can obtain information from network layers 3 and above, such as IP addresses, Protocols, and SNMP data.

Therefore, the information Wi-Fi Analysis is able to display also depends on configured [Discovery Settings](#), such as [SNMP Community Strings](#) and [Credentials](#), [Active Discovery Ports](#), [Extended Ranges](#), and [Device Health](#) testing.

Wi-Fi App Screens

To switch between the different Wi-Fi app screens, tap the menu icon  (or swipe right) to open the left-side [navigation drawer](#).

The Wi-Fi app's navigation drawer displays a real-time count (in parentheses) of each wireless component AirCheck G3 has detected. Tap an option to open the corresponding screen.

NOTE: The **General Settings** for Wi-Fi control which channels and bands are scanned to populate the Wi-Fi screens. See the [General Settings](#) topic for more explanation.

Wi-Fi App List Screens

The Wi-Fi app screens, except for Channels Map, display a list of discovered items, much like a [Discovery App list screen](#). You can [Filter](#)  and [Sort](#)  the list by different characteristics and tap a network component's card to view its details.

The example image below shows the APs screen with common Wi-Fi app functions:

As with AutoTest and other AirCheck G3 screens, the icons in Wi-Fi analysis change color to indicate a **Warning** or **Failure** condition. The app also displays icons in **Blue** to indicate Problem-related information that does not constitute a warning or failure, and **Green** to indicate that a previous Problem has been resolved.

NOTE: To adjust the **Problem Settings**, access them from the Discovery app's left-side **navigation drawer**. Problem Settings in

the Discovery app are also applied to the Wi-Fi Analysis app.

The Wi-Fi list screens, and other app screens with long lists, support fast scrolling. Touch and drag the scrollbar handle to the right of the list to scroll quickly up and down.

Wi-Fi List Cards

The information displayed on each card varies depending on the selected Sort characteristic and the data the AirCheck G3 was able to discover. For example, a card on the Channels list screen displays the channel number, frequency, connected APs, and utilization.

The lower left field displays the characteristic by which the list screen is currently sorted. In the image above, the Channels list is sorted by Client Count.

If a device is grayed out, the AirCheck G3 no longer detects a signal from it. The client card shown below indicates that the "Rspbry" client cannot be detected currently.

The time the device was Last Seen, meaning last detected by the AirCheck G3, is shown on the device's Details screen.

 **Wi-Fi - Client**

 **Rspbry:b827eb-35a92a**
Wi-Fi Probing Client
Address
MAC: Rspbry:b827eb-35a92a
802.11
Channel: 44
Type: --
Signal: --
SNR: --
Last Seen: 3:12:15 PM 

 **RF and Traffic Statistics** >
CH: 44 Utilization: 0%

Filtering in the Wi-Fi App

Each Wi-Fi Analysis screen has different Filter options that are appropriate for the network component type you are analyzing.

← Channel Filters	
Bands (3)	▼
Devices (1)	▼
SSIDs (70)	▼
APs (55)	▼
BSSIDs (244)	▼
Problems (1)	▼

NOTE: The Channels, AP, BSSID, and Client screens include the ability to filter on Problems.

Tap the filter button  near the top left of the Wi-Fi screens to set filters that control which network components are displayed. You can also filter the **Channels Map > Overlap** screen, as shown below:

← Overlap Filters	
Channels (5)	▼
SSIDs (9)	▼
Signal (3)	▼
SNR (4)	▼
802.11 Type (5)	▼
Security (3)	▼

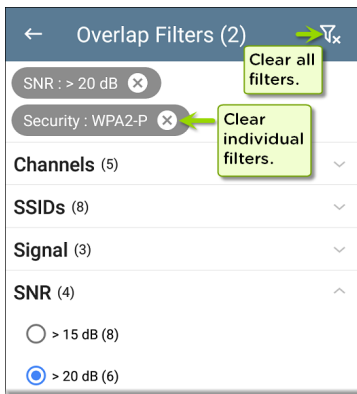

The number in parentheses shows how many active network characteristics are detected for each category. (The example shows (5) active Channels, (9) SSIDs, and so on.)

Tap a category to select filters by tapping the checkboxes or radio buttons.

Security (3)	▲
<input type="checkbox"/> WPA2-E (2)	
<input checked="" type="checkbox"/> WPA2-P (9)	
<input type="checkbox"/> WPA-P (5)	

Under each category, the number of discovered APs is shown for each characteristic. (In the example above, there are (3) Security types detected and (9) APs using the WPA2-P Security type.)

In this example, the Overlap screen shows only those APs that fall under your chosen filter parameters.

When filters are selected, those active filters are displayed at the top of the Filters screen.

- Tap the ✕ button to the right of each filter to clear it.
- Tap the clear filter icon at the top right to clear all filters.

Back on the Overlap screen, the number of active filters displays to the left of the filter icon, like this: 2 .

If the screen is a list, like the APs screen below, the screen title shows the number of filtered devices out of the total discovered devices (5 filtered devices out of 16 total).

Sorting in the Wi-Fi App

Tap the Sort bar or down arrow to open the Sort drop-down menu. Each list screen supports relevant Sort options based on what you are viewing. The APs screen Sort options are shown below as an example.

Wi-Fi - APs (55)		
 	Signal	
 192.168.1.1 -29 dBm	Name	Bm >
 AsusTk:192.168.1.1 -34 dBm	Problem	Bm >
 10.24.8.35 -39 dBm	Mfg Prefix	Bm >
 10.24.8.35 -39 dBm	SSID Count	Bm >
 10.24.8.35 -39 dBm	BSSID Count	Bm >
 10.24.8.35 -40 dBm	Channel Count	Bm >
 Lnksys:10.24.8.35 -42 dBm	Client Count	Bm >
 10.24.8.35 -43 dBm	Authorization	Bm >

Select a Sort option to order the list based on your selected characteristic.

Wi-Fi - APs (16)		
  SSID Count		
 Tchclr:7c9a54-be4263 SSIDs: 4	-68 dBm	>
 Pegatn:600292-bc48c0 SSIDs: 3	-42 dBm	>
 Tchclr:7c9a54-be425a SSIDs: 3	-66 dBm	>

The selected Sort option displays in the Sort bar above the list, and the sort characteristic for each item is shown under the type icon and name. In the image above, the discovered APs are sorted by SSID Count, which is shown below each AP icon.

Tap the sort order icon  to switch the sort order between normal and reverse order.

Wireless devices and IDs are sorted in groups. Those with resolved names appear at the top (in normal order), and then devices with only IPv4,

IPv6, and MAC addresses appear below, respectively. Reversing the normal sort order reverses the devices within the groups but does not change the order of the groups.

Refreshing Wi-Fi

Tap the action overflow icon  at the top right of the screen in any of the Wi-Fi screens (Channels Map, Channels, SSID, APs, BSSIDs, or Clients), and select **Refresh Wi-Fi** to clear and repopulate the Wi-Fi app screens with data.

Clearing All Problems

Tap the action overflow icon  at the top right of the screen in any of the Wi-Fi screens (Channels Map, Channels, SSID, APs, BSSIDs, or

Clients), and tap **Clear All Problems** to clear all detected problems on all Wi-Fi lists.

See [Wi-Fi Problems Screen](#) for more information.

Setting Authorization

You can also use the Authorization to sort the BSSID and Clients lists. From the BSSID or Clients list screen, tap the action overflow icon  at the top right and select **Set Authorization** to see how these devices are currently categorized and the number of devices in each category.

Set Authorization

38 of 226 devices selected

- ☐ Authorized (0)
- ☐ Neighbor (0)
- ☐ Flagged (0)
- ☐ Unknown (0)
- ☐ Unauthorized (0)
- ☒ Unspecified (38)

CANCEL

OK

See [Wi-Fi Details Screens](#) for more information.

Uploading Results to Link-Live

Tap the action overflow icon  at the top right of the screen in any of the Wi-Fi screens (Channels Map, Channels, SSID, APs, BSSIDs, or

Clients), and tap **Upload to Link-Live** to send the current Wi-Fi results to the Analysis page  on Link-Live.com.

NOTE: Discovery app results automatically upload with the Wi-Fi results.

See the [Link-Live chapter](#) for more information.

Wi-Fi Details Screens

Tap any card on a Wi-Fi list screen (SSIDs, APs, BSSIDs, Clients, etc.) to open the Details screen for that device or network ID.

On the Wi-Fi Details screens, you can tap any **blue linked name or address** to open a Discovery or Wi-Fi app screen for the linked device.

NOTE: Non-underlined links open in the same app (in this case Wi-Fi), and [under-](#)

[lined links](#) open in a different app (in this case Discovery).

Each Details screen shows additional information about the selected item, any Problems detected by the AirCheck G3, and counts for other connected network devices or IDs.

See also [Data Fields on the Top Details Card in the Discovery chapter](#). Many of the Discovery data fields are the same as those shown in Wi-Fi Details.

 **Wi-Fi - Channel**

 **Channel 64**
5.320 GHz
Channel: 64
Center Frequency: 5.320 GHz
Frequency Range: 5.310 - 5.330 GHz
Width: 20 MHz
Band: 5 GHz UNII - 1/2
Attributes: Dynamic Frequency Selection (DFS) channel

 **SSIDs** 2 >

 **APs** 1 >

 **BSSIDs** 2 >

 **Clients** 2 >

 **RF and Traffic Statistics**

The Channel Details screen above shows how many SSIDs, APs, BSSIDs, and Clients are detected on Channel 64. Tap the lower cards in

Wi-Fi Details to open a list screen that is filtered for the network component you are examining.

If you select BSSIDs on the Details screen for Channel 64, the BSSIDs screen opens and filters for BSSIDs found on Channel 64 only.

Wi-Fi - BSSIDs (16/149)			
1	Signal		
 Cisco:b83861-84aaf1	-73 dBm	Cisco WEP128 SA	CH: 64
 Cisco:b83861-84aaf3	-73 dBm	Cisco WEP128 OA	CH: 64
 Cisco:b83861-84aafd	-73 dBm	aa-Cisco-Wep	CH: 64

See the topics for each Wi-Fi app screen type (SSIDs, APs, etc.) for more discussion of the corresponding Details screen.

Wi-Fi Problems Screen

If any of the enabled Wi-Fi Problems are detected, the Problems card appears on the Wi-Fi Details screen.

The Problems card shows the icon color of the highest severity problem, and the number of detected **Warning**, **Failure**, **Information**, and **Resolved** conditions for the device or network component.

Tap the card to open the Problems screen.

Problems (2)	
Severity	
 TRENDn-af1e31 channel changes: 1	12:24:22 PM >
 TRENDn-af1e35 channel changes: 6	12:18:21 PM >

On the Problems list screen, tap the Problem's row to read a detailed description.

You can also tap the sort field to sort the list by **Severity** or by the time when the problem was **First Detected**. To clear a problem, tap the action overflow button  at the top right, and then tap **Clear Problem**.

See [Problem Settings](#) in the Discovery app to select which Wi-Fi Problems are detected and displayed by your AirCheck G3.

RF and Traffic Statistics Overview

The Channel, BSSID, and Client Details screens can display RF and Traffic Statistics if any traffic is detected.

This section describes the common elements of the RF and Traffic Statistics screen. See the topic for each type of Details screen for differences.

 **RF and Traffic Statistics**

Channel Utilization: 3%

The RF and Traffic Statistics card shows the Channel number or the Signal strength of the strongest AP on the channel and the channel's Utilization percentage.

Tap the card to view graphs of Signal, Noise, Utilization, and Retries.

To pan and zoom on the graphs, you can swipe, double tap, and move the slider. See the [Trending Graphs](#) topic for an overview of the graph controls.

Strongest AP: The AP on the channel with the strongest signal

Under each graph, a legend table displays the Current, Minimum, Maximum, and Average

measurements. The Current column contains measurements from the last second. Min, Max, and Avg columns show cumulative measurements gathered during the time the RF and Traffic screen has been open.

Tap the refresh button  at the top of the screen to clear and restart the measurements.

Signal (dBm) graph: Plots the signal strength in dBm of the selected AP or AP with the strongest signal on a channel

- Signal - The AP's signal strength in dBm
- Noise - The noise level in dBm on the channel used
- SNR - The network's signal-to-noise ratio, a measure of signal strength relative to noise, measured in decibels (dB)

Channel Utilization (%) graph: Plots percentage of the channel capacity being used by 802.11 devices and by non-802.11 interference.

Retries (% of packets) graph: Plots percentage of transmitted packets that are retry packets.

- **Retry Rate %** - The percentage of total packets that are retry packets
- **Retry Pkts** - The number of retry packets

- **Total Pkts** - The total number of transmitted packets

Locating Wi-Fi Devices

You can use your AirCheck G3 to locate APs and Wi-Fi clients from the Channels Map screen for **BSSIDs** and **Clients**.

To begin a location action:

1. Start the Wi-Fi app.
2. From the menu icon , select **BSSIDs** or **Clients**.
3. Select the BSSID or Client that you want to locate.
4. Tap the FAB menu icon  in the lower right corner of the screen. This displays the FAB pop-up options.

The screenshot displays the 'Wi-Fi - BSSID' screen of the Wi-Fi Analysis App. At the top, there is a blue header with a hamburger menu icon and the title 'Wi-Fi - BSSID'. Below the header, the main content area shows details for a specific BSSID: 'ASUSTekC:d850e6-cc9c9c'. The BSSID is displayed in a large font, followed by 'BSSID' in a smaller font. Below this, the SSID is shown as 'wisornet-wpa2psk' in blue text. The AP (Access Point) is listed as 'router.asus.com' in blue text. The BSSID is repeated as 'd850e6-cc9c9c'. The channel is '802.11' and the channel frequency is '48 (80 MHz, 36 - 48)'. The types are 'ac, n, a', the signal strength is '-46 dBm', and the SNR is '43 dB'. The security type is 'WPA2-P'. The last seen time is '9:43:28 PM'. There are two buttons: 'Locate' and 'Connect'. To the right of the 'Locate' button is a circular icon with a line graph. To the right of the 'Connect' button is a circular icon with a list of checkmarks. Below the main details section, there are three tabs: 'Rates and Capabilities', 'Clients', and 'RF and Traffic Statistics'. The 'Rates and Capabilities' tab is selected, showing a 'Capture (Wi-Fi)' button and a circular icon with a Wi-Fi symbol and '01011 10%'. The 'Clients' tab shows a 'Name and Authorization' button and a circular icon with a checkmark. The 'RF and Traffic Statistics' tab shows a circular icon with an 'X'. The 'RF and Traffic Statistics' section shows 'CH: 48 (80 MHz, 36 - 48)' and 'Utilization: 0%'.

5. Tap **Locate**. This opens the Locate screen and causes your AirCheck G3 to "listen" for the BSSID or Client wireless devices you

want to find using either the internal antennas or the optional external antenna (sold separately or in kits).

- Tap the speaker icon  to enable an audible tone that increases in rate and pitch as the signal strength of the device increases (as you get closer to it).
 - Tap the speaker icon  to toggle sound on or off.
 - Use the volume buttons on the side of the tester to control tone volume.
- Tap the **External Antenna** toggle to enable the optional external antenna for BSSID or Client location.
 - In areas with many rooms, like a hospital or school, the internal antennas are more effective. See [Using the Internal Antennas to Locate](#) below.
 - In large, open areas, the external antenna can help locate devices more quickly. See [Using the Optional External Antenna](#) below.

Locating with the Internal Antennas

AirCheck G3 uses the internal antennas by default.

1. Navigate to the RF and Traffic Statistics screen for the BSSID (AP) or client you need to locate.
2. (Optional) Tap the speaker icon to toggle the audible tone on or off.
3. Divide the area you want to search into four sections.

4. Go to one corner of your search area, and note the device's signal strength on the Signal graph.

5. Go to the other three corners of the area, and note the signal strength at each corner.
6. Go to the section with the strongest signal.
7. Repeat steps 3 through 6 until you find the device.

If you still cannot find the device, try looking on the floors above or below you. If you cannot find a client, try locating the AP to which the client is connected first.

Locating with the Directional External Antenna

In large, open areas, the directional external antenna can help determine the direction of a signal source more precisely than the internal antennas. Visit NetAlly.com for purchasing information.

1. If using the Directional Tri-band (2.4, 5, and 6 GHz) external antenna, screw the antenna's RP-SMA connector into the side antenna port (shown below). If using the Dual-band (2.4 and 5 GHz) Flag antenna,

screw the external antenna cord into the antenna port.

2. On the RF and Traffic Statistics screen, tap the **External Antenna** toggle to enable the external antenna.
3. (Optional) Tap the speaker icon to toggle the audible tone on or off.
4. Divide the area you want to search into four sections.

5. Go to the center of your search area.

6. For the Directional Tri-band external antenna, use the swivel joint on the RP-SMA connector to angle the antenna so that the "target" silkscreen on the antenna points toward your search area, as shown below. Point the antenna towards each corner of the area. To get the best measurements, hold it at a constant height and above barriers such as cubicle walls.

7. For the Dual-band Flag antenna, point the front edge of the antenna toward your search area, as shown below.

8. Go to the middle of the section with the strongest signal.
9. Repeat steps 4 through 7 until you find the device.

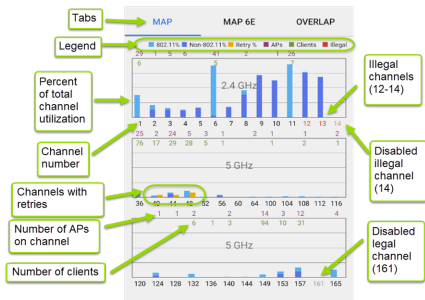

Channels Map

The Channels Map screens provide charts of channel utilization with AP coverage and overlap. Swipe right or left or tap the tab names to switch between the chart types: **Map**, **Map 6E**, or **Overlap**.

Map and Map 6E Tabs

The Map and Map 6E tabs display a bar graph of 802.11 and non-802.11 utilization, retry percentage, APs for each channel, clients for each channel, and illegal channels. (The Map 6E tab is for 6 GHz channels only.)

- Blue vertical bars show the percentage of each channel's capacity used by 802.11 devices (light blue) and non-802.11 interference (dark blue).
- Yellow bars next to the blue bars show the percentage of retries. In the example above,

Channels 1 and 3 show a small percentage of retries.

- Channel numbers are listed on the x-axis and utilization percentage on the y-axis.
- Illegal channel numbers—channels that are not legal for the country that your unit is set to operate in—are shown in bright red. In the example above, Channels 12, 13, and 14 are illegal.
- Disabled legal channels are shown in light gray. In the example above Channel 161 is disabled.
- Disabled illegal channels are shown in light red. In the example above Channel 14 is an illegal channel and disabled.
- AP counts for the APs' primary channel are shown in dark red at the top of the column for each channel. In the example below, Channel 161 has 7 APs. (Channels without APs can still show 802.11 utilization because of overlap from adjacent channels.)

- Client counts for the channel are shown in green near the top of the column for each channel. In the example below, Channel 161 has 15 clients.
- Tap a Channel's column on the Map or Map 6E graph to select and highlight the channel. This displays the CHANNEL DETAILS and SPECTRUM links at the bottom of the screen. In the example below, Channel 161 is highlighted.

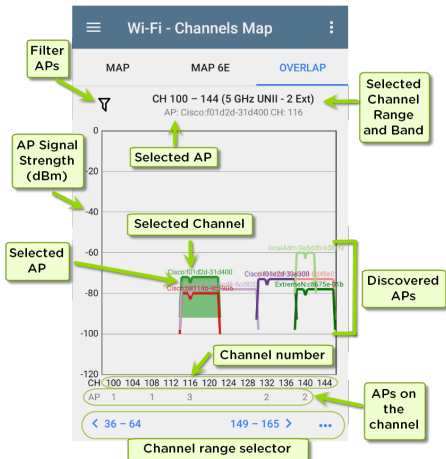

The [Channel Details](#) screen lets you examine the addresses and devices operating on the channel and perform a deeper analysis.

The [Spectrum](#) link opens the Spectrum app, a Wi-Fi spectrum analyzer that provides data about signal strength and noise.

Overlap Tab

Tap **Overlap** to view access point channel, coverage, and overlap. This can help you spot potential coverage issues. Each discovered AP is shown as a colored bracket on a graph based on channel coverage (on the x-axis) and signal strength in dBm (on the y-axis).

- Tap the Filter icon  near the top left to open the Overlap Filters screen to control what APs are displayed. You can select filters for channels, SSIDs, Signal, SNR, 802.11 type, or Security.
- Tap an AP on the graph to select it and its primary channel. This highlights the area covered by the channel and lists the channel information above the graph. In the image below, the AP named "Cisco:b8114b-4b7906" on channel 132 is selected.

- Double-tap the graph to zoom in or use "pinch" gestures with your thumb and forefinger. Tap the Restore icon (⌂) or reverse the pinch gesture to return to the full graph. The image below shows a zoomed-in view with the AP named "Cisco:f01d2d-33e300" on channel 116 selected.

- Tap the **blue channel** selectors at the bottom to view a different Wi-Fi band (2.4, 5 and 6 GHz) and channel range on the graph.
- Tap the action overflow button **...** to open the **AP Details** or **Channel Details** screens for the selected AP or Channel or to open the **Spectrum App**.

See [Filtering in the Wi-Fi App](#) for an explanation of the Overlap screen's filtering options.

Channels

The Channels list screen displays the characteristics of the wireless Channels as they are scanned in your location.

Wi-Fi - Channels (43)			
		Channel	
	Channel 1	APs: 11	>
Channel 1	2.412 GHz	Util: 32 %	
	Channel 2	APs: 0	>
Channel 2	2.417 GHz	Util: 20 %	
	Channel 3	APs: 0	>
Channel 3	2.422 GHz	Util: 0 %	
	Channel 4	APs: 0	>
Channel 4	2.427 GHz	Util: 7 %	
	Channel 5	APs: 1	>
Channel 5	2.432 GHz	Util: 37 %	
	Channel 6	APs: 11	>
Channel 6	2.437 GHz	Util: 53 %	
	Channel 7	APs: 0	>
Channel 7	2.442 GHz	Util: 24 %	

You can [Filter](#)  and [Sort](#)  the list to determine which Channels are shown and their order. Refer to the [Wi-Fi App List Screens](#) topic if needed.

By default, Channels are ordered by channel number, and each card shows the channel frequency, number of APs, and total Utilization percent.

Tap a Channel card to open the Channel Details screen.

Channel Details

 **Wi-Fi - Channel**

 **Channel 1**
2.412 GHz
Channel: 1
Center Frequency: 2.412 GHz
Frequency Range: 2.402 - 2.422 GHz
Width: 20 MHz
Band: 2.4 GHz

 **Problems** 1 >
Warnings: 1

 **SSIDs** 24 >

 **APs** 17 >
10.250.2.101, 10.250.3.9, Cisco-Li:20aa4b-0f...

 **BSSIDs** 46 >
18b169-8e7456, 18b169-8e7457, 18b169-c7...

 **Clients**

The Channel Details screen displays the channel's Center Frequency under the icon,

along with the Frequency Range, Width, and Band.

Dynamic Frequency Selection (DFS) channels also display an Attributes field that indicates DFS.

Channel RF and Traffic Statistics

The RF and Traffic Statistics card appears when there is an active AP and Utilization on the channel. See [RF and Traffic Statistics Overview](#) in the Wi-Fi Details Screens topic.

Channel FAB

Tap the [FAB](#) on the Channel Details screen to:

- Open the [Capture](#) app to record a packet capture on the channel.
- Open the [Channels Map](#) screen with the current channel selected.
- Open the [Spectrum](#) app to view signal measurements for the channel.

SSIDs

The SSIDs list screen shows all the network SSIDs the AirCheck G3 has discovered.

Wi-Fi - SSIDs (89)

You can [Filter](#)  and [Sort](#)  the list to determine which SSIDs are shown and their order. Refer to the [Wi-Fi App List Screens](#) topic if needed.

By default, SSIDs are ordered by Signal strength. Each card shows the network security status and number of APs on the network.

The security status icons have the following meanings:

-  Green closed lock: All APs on the network use secure protocols, like WPA2 or WPA3.
-  Yellow closed lock: One or more APs use WEP or Cisco LEAP protocols, which are less secure.
-  Red open lock: The network does not have security enabled.

Tap a SSID card to open the SSID Details screen.

SSID Details

In addition to the Signal and Security Type, the SSID Details displays the AP on the network with the strongest signal, 802.11 Types that the APs in

the network support, and the time the AirCheck G3 last detected activity on the network (Last Seen).

AirCheck G3 can detect and display 802.11 types a/b/g/n/ac/ax.

SSID FAB

Tap the **FAB** on the SSID Details screen to **Connect** to the network.

This action opens the **AutoTest** app and creates a new **Wi-Fi profile** called "Connect to [SSID]."

See [Creating a Wi-Fi Profile from the Wi-Fi Analysis App](#) in the AutoTest chapter for a more detailed description of this process.

APs

The APs list screen displays all the Access Points discovered operating on your wireless networks.

AP: [10.24.8.36](#)
SSID: [LRG](#)
BSSID: [Sonicwal:18b169-c8decf](#)
Security Type: WPA2-P
Last Seen: 9:29:39 PM

 **RF and Traffic Statistics**
Channel Utilization: 7%

The top Client Details card for a connected Client displays the following information:

- Client's **IP** and **MAC** addresses.
- User-assigned **Authorization status** (if set)
- Supported **802.11** media **Types**
- Signal-to-Noise ratio (**SNR**) measurement
- Name of the **AP** to which the Client is connected
- **SSID** of the network to which the Client is connected
- **BSSID** on which the Client is operating
- Network **Security** type
- Time the Client was **Last Seen** by the AirCheck G3

Probing Clients

If the client is a Wi-Fi probing client, the details screen replaces AP details with a list of the SSIDs for which the client is probing in the **Probes For** field:

**UGSI:6c0b84-c1f09f**

Wi-Fi Probing Client

AddressMAC: [UGSI:6c0b84-c1f09f](#)**802.11**Channel: **6**

Types: g, b

Signal: -45 dBm

SNR: 50 dB

Last Seen: 11:03:02 AM

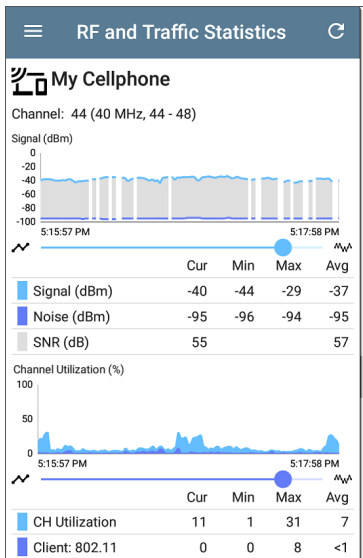

Probes For: _OpenWrt_5G, Nighthawk 802.11ax
5GHz, NETGEAR17-5G

Client RF and Traffic Statistics

Tap the **RF and Traffic Statistics** card to open the RF and Traffic Statistics screen. This screen displays the client's ID or address and channel number at the top of the screen as well as informational graphs.

To pan and zoom on the graphs, you can swipe, double tap, and move the slider under each graph. Tap the Restore icon  to return to the full graph. (See the [Trending Graphs](#) topic for an overview of the graph controls.)

See [RF and Traffic Statistics Overview](#) in the Wi-Fi Details Screens topic for an explanation of the common elements of this screen.

The Signal graph shows the signal in light blue, noise in dark blue, and a calculated SNR.

The Channel Utilization graph uses light blue to show 802.11 channel utilization and dark blue to show non-802.11 utilization:

Breaks in the Client RF and Traffic graphs may occur if the Client is not consistently transmitting, so there is no data for AirCheck G3 to display during those times.

The Clients RF and Traffic Statistics screen also displays a graph of Transmit (Tx) and Receive (Rx) Rates in Mbps, number of Tx Streams, and Tx Channel Width in MHz.

Clients FAB

Tap the **FAB** on the Client Details screen to **Locate** the client device, to open the **Capture** app to record a packet capture of traffic going to

and from the client, or to assign or change its **Name and Authorization**.

- Select **Locate** to open the Locate Client screen. See [Locating Wi-Fi Devices](#).
- Select **Capture** to open the Capture app populated with the Channel and MAC address of the client. See the [Capture app](#) chapter.
- Select **Name and Authorization** to open the Name and Authorization dialog. See [Assigning a Name and Authorization to a Device](#).

Bluetooth

The Bluetooth list screen displays all the Bluetooth devices discovered operating on your wireless networks.

NOTE: This list requires that Bluetooth is enabled in your AirCheck G3 system settings. To verify, swipe down from the Status Bar at very top of the screen to open the system Notification Panel to see if the Bluetooth disabled icon  is displayed. If so, tap the icon to turn on Bluetooth and display the Bluetooth enabled icon .

Bluetooth (8)		
 Signal

- Any advertised flags or data
- Last seen date/time.

Path Analysis App

Path Analysis traces the connection points, including intermediate routers and switches, between the AirCheck G3 and a destination URL or IP address. You can use Path Analysis to identify issues such as overloaded interfaces, overloaded device resources, and interface errors. It also shows how devices within your network (and off-net devices) are connected to each other along a path.

All switches are pre-discovered through SNMP queries. When the measurement is complete, AirCheck G3 shows the number of hops to the destination device. A maximum of 30 hops can be reported.

Introduction to Path Analysis

Path Analysis combines Layer 3 and Layer 2 measurements.

The Layer 3 measurement combines the classic Layer 3 IP (UDP, ICMP, or TCP) traceroute measurement with a view of the path through the Layer 2 switches.

The Layer 2 measurement discovers switches between the router hops by looking for the routers' MAC addresses in the switch forwarding tables by sending SNMP queries to all discovered switches. The switches found in the path are displayed between the router hops when the measurement finishes.

Path Analysis is most effective when you have configured the Discovery app with SNMP credentials. See [SNMP Configuration](#) in the [Discovery Settings](#) topic to learn how.

Path Analysis Settings

The Path Analysis source device is always your AirCheck G3. The default destination is www.google.com.

Populating Path Analysis from Another App

Like other AirCheck G3 testing apps, when you open Path Analysis from another app, like [Discovery](#), the address of the network component you were viewing in the previous app is pre-populated as the Path Analysis Destination.

Configuring Path Analysis Manually

Open the app settings to configure a custom destination and select an Interface and Protocol. To open from the Path Analysis app screen, tap the settings  icon, or open the left-side [navigation drawer](#) and select **Path Analysis Settings**.

Path Analysis Settings	
Device Name	10.250.2.166
Interface	Any Port
Protocol	Connect (TCP)
TCP Port	80 (www-http)

On the Path Analysis Settings screen, tap each field as needed to configure your target:

Device Name: Tap to enter the IP address or DNS name of the Path destination. The default is www.google.com.

Interface: This setting determines the device port to run the path analysis runs. Tap the field to select a port. (See [Selecting Ports](#) for explanations of the different ports.)

AirCheck G3 must have an active network link on the selected port to run a Path Analysis. If **Any**

Port is selected, available links are used in the order shown in the Interface selection dialog.

See [Test and Management Ports](#) for explanations of the different ports and how to link.

Protocol: Tap to select the Connect (TCP), Ping (ICMP), or Echo (UDP/7) protocol for your Path Analysis.

TCP Port: This field only appears if you have selected the Connect (TCP) Protocol. Tap to enter the port number over which you want to run Path Analysis. (You may need to enter a specific port number because routes can vary based on the port number and/or may be blocked by firewalls.)

Running Path Analysis

Tap the **START** button at the top of the app screen to begin a Path Analysis.

NOTE: AirCheck G3 must be linked on the Interface (Port) selected in the app's settings. See [Test and Management Ports](#) for help.

A Layer 2 Details screen displays the device name and IP address at the top.

NOTE: The yellow switch icon in the image above indicates a **Warning** status. See [Network Problems in Path Analysis](#) later in this topic.

Layer 2 Switch Interfaces and Statistics

Layer 2 Switch Details screens in Path Analysis display a summary of the Interface Statistics (described below). To view all available information for these interfaces, tap their blue links to open a [Interface Details](#) screen in the Discovery app.

Statistics for Interfaces on Layer 2 switches may be identified and measured if the AirCheck G3 has SNMP access.

In/Out: Indicates the interface type and name. The interface name often contains the physical port number where the switch is connected to the network.

Util: Percentage of total interface capacity being used

Discards: Percentage of total packets that have been dropped

Errors: Percentage of packets containing errors

Layer 2 APs

If the Layer 2 path starts or ends with a Wi-Fi device, its AP is shown as a Layer 2 device in the path.

A Layer 2 AP card indicates the connected network SSID, channel, and 802.11 type in use.

Layer 2 AP Details screens allow you to further examine the wireless characteristics by selecting their blue links, which open a [Wi-Fi app Details](#) screen.

No layer 2 devices discovered

 Layer 2 Path

No layer 2 devices discovered

In some cases, the AirCheck G3 does not discover Layer 2 devices between Layer 3 devices. There may not be any Layer 2 devices, or AirCheck G3 might not have SNMP access to those switches.

The Layer 2 card may also display a result of "No switches found," which indicates that Discovery

has not found any switches with SNMP access to determine if the switches are in the path. If this is an unexpected result, check and verify your [SNMP Configuration](#) and [Extended Ranges](#) in the Discovery app settings.

Uploading Results to Link-Live

Tapping the **UPLOAD TO LINK-LIVE** link on the top card opens the [Link-Live](#) sharing screen for path analysis results:

Path Analysis results are uploaded to the
Analysis page  on Link-Live.

AirMapper™ App

The AirMapper Site Survey application enables you to perform a Wi-Fi survey of an indoor or outdoor location and upload it to Link-Live Cloud Service. On [Link-Live.com](https://link-live.com), you can view heatmaps and Wi-Fi measurements for each data collection point.

The Signal heatmap is available to all Link-Live users. **AllyCare** Support customers can also view maps of Noise, SNR, and Max TX and RX Rates. Visit [NetAlly.com/Support](https://netally.com/support).

AirMapper Settings

Setting up the AirMapper app to perform a survey involves naming the survey, loading a floor plan image, specifying its dimensions, setting scanning mode, and overriding bands and channels.

- Only .png and .jpg image files types are supported.
- You may need to use an image editing application to crop your floor plan image to known dimensions, such as the walls of a building or property boundary.

Access the AirMapper settings by selecting the menu icon  or settings icon  at the top of the main app screen.

Configuring an AirMapper Survey

AirMapper Settings	
Name	Second floor survey
Description	Quick walk all isles
Floor Plan	Denver Site >
Survey Mode	Current Scan (Passive)
Override Bands and Channels	<input type="checkbox"/> Disabled

Name

Tap the **Name** field to enter a custom name for your AirMapper project. This name is uploaded to Link-Live to identify this survey project.

Description

Enter any additional information you want for the survey.

Floor Plan

NOTE: You can configure floor plans on Link-Live and then send them to your AirCheck G3. A notification appears when a new floor plan arrives:

The new floor plan is added to the existing floor plans but is not automatically selected.

To select a floor plan:

1. Tap **Floor Plan** to open the list of available floor plans.

2. Select a floor plan or load a new floor plan by tapping the floating action button , using the file selector to navigate to the new map image file, and then tapping the file to select it. This displays the Floor Plan menu.

- Fill out the remaining fields for the Floor Plan as needed:

Floor Plan	
Name	DenverSite
Imported File	DenverSite.png
Dimensions	500 x 711 feet >
Signal Propagation	20.0 feet

Name: Enter a name for this floor plan. This field defaults to the file name.

Imported File: The original image file name.

Dimensions: Tap this option to display the floor plan with two markers. Move the markers to two places on the floor plan that are a known distance apart. Then tap **Marker Distance** to enter the distance between the two points. (Set the units (feet

or meters) in the [General Settings](#) for the test apps, accessed from the left-side [navigation drawer](#) ) When finished, tap  to return to the Floor Plan menu.

Signal Propagation: Tap to enter a value for the propagation radius for the survey sample points.

Survey Mode

Tap Survey Mode to select the Wi-Fi data collection method that best suits your Wi-Fi environment and survey data collection requirements:

1. **Auto Sampling (Passive)** is the default and preferred way to perform a survey. AirMapper automatically records data (at the interval specified with the Auto Sampling Period setting) between two points that you choose. This simplifies data sampling and can prevent oversampling. For example, if your survey includes a long hallway or open space, you can take a manual sample measurement at one end of the area, go to the other end, and then take

another measurement. AirMapper fills in the line between the two measurements with automatic measurements made at the sampling period. See [Collecting AirMapper Data](#) for more information.

2. **Current Scan (Passive)** Passive surveys allow immediate data collection based on the most recent AP beacon seen from each BSSID. AP BSSIDs age out after 140 seconds, and Wi-Fi clients age-out after 4 minutes.
3. **Scan Once (Passive)** is more precise but more time-consuming. When a point is selected, all the BSSID information is cleared, and the unit acquires a single scan of the selected channels for the selected dwell time. This gives an exact measurement. However, in congested environments any beacons not seen during the dwell time are not included in that sample point.
4. **Connected (Active)** collects data from the linked connection of the Wi-Fi Test port.
NOTE: Selecting this method disables the

AirMapper settings for Dwell Time and Override Bands and Channels.

Auto Sampling Period

(Enabled for Auto Sampling mode only.) Tap to choose a preset sampling period or to enter a custom value. This setting controls how frequently an Auto Sampling survey takes automatic measurements between points that you select manually.

Dwell Time

(Enabled for passive survey modes only.) Tap to choose a preset dwell time or enter a custom value. See the [General Settings](#) for additional information about dwell time.

Override Bands and Channels

(Enabled for passive survey modes only.) Tap **Override Bands and Channels** to enable selection of different bands and channels than the values defined in [General Settings](#). (These override settings are used only for AirMapper site surveys.) Enabling this setting displays the Wi-Fi Bands and Channels setting.

Wi-Fi Bands and Channels

(Enabled only when Override Bands and Channels is enabled.) Tap **Wi-Fi Bands and Channels** to open a list of frequency bands. Then tap the frequency band to open a menu to select specific channels to use for that band. See the [General Settings](#) for additional information.

 Wi-Fi Bands and Channels
Wi-Fi Band(s) 2.4 GHz, 5 GHz, 6 GHz
2.4 GHz Channels All
5 GHz Channels All
6 GHz Channels All

NOTE: Selecting a subset of channels and bands lets you exclude scans of unneeded channels from the survey. This improves survey performance and reduces the amount of data collected.

Changing Settings after Starting

You can reopen the AirMapper settings to change the **Floor Plan > Dimensions** or **Signal Propagation** size after starting your survey. Existing data points are retained on the map unless you select a different Floor Plan.

NOTE: NetAlly does *not* recommend that you change the band, channel, or dwell time settings after you have started a survey. The survey results for the multiple settings can create confusing or less reliable results. If you wish to do so and if the **Override Bands and Channels** setting is enabled, you can use the AirMapper Settings to make changes after you have started your survey. If the **Override Bands and Channels** setting is *not* enabled you must use the General Settings to make changes.

Hidden SSIDs and APs

For any [Hidden] APs or SSIDs at your site that you want detected during a survey, NetAlly recommends creating and enabling a Wi-Fi Profile in the AutoTest app, configured with the appropriate credentials. Otherwise, AirMapper detects the BSSIDs associated with hidden devices but may not determine their APs/SSIDs.

Collecting AirMapper Data

This section details how to collect and manage your survey data.

- [Conducting a Passive Survey](#)
- [Conducting a Connected \(Active\) Survey](#)
- [AirMapper Survey Tips](#)

Conducting a Passive Survey

The floor plan you have selected in [AirMapper Settings](#) displays on the main AirMapper screen.

1. Tap **START** to begin the survey.
2. A message displays the survey type, radio, and Bluetooth status. This message appears each time you begin or restart or return to the survey from another app. Tap **Dismiss** to remove the message.

A screenshot of a dark blue rectangular overlay from the AirMapper app. It contains white text that reads: "Passive Survey", "Wi-Fi Management Port: GuestNetwork", and "Bluetooth: Enabled". In the bottom right corner of the overlay, the word "DISMISS" is written in white capital letters.

Passive Survey
Wi-Fi Management Port:
GuestNetwork
Bluetooth: Enabled

DISMISS

3. To collect data, move around your site, and tap the map at your current location to scan the enabled wireless channels in that spot. This displays a red circle on the floor plan.
 - Do not move from your location until the data point on the screen turns from red to green. (This takes only a few seconds and shows when the scan is complete.)

- You can undo the last point, rotate the image, and use swiping or pinch-to-zoom gestures to pan and zoom the map as needed.

- If you use the default Auto Sampling (Passive) survey, you can collect data

points automatically, especially when sampling in straight lines such as long hallways or when crossing open spaces.

- a. Tap the floor plan to take a survey measurement, and wait for the circle to turn green.
- b. Move across the survey area, walking steadily in a straight line. Your unit emits a tone and increments a counter on the AirMapper screen header each time it reaches the value set in the Auto Sampling Period setting.

TIP: Tap the floor plan if you have to change directions or if you change your pace to walk either faster or slower.

- c. Tap floor plan again when you reach the end of the straight line. AirMapper automatically spaces

regular measurements along the path between the two locations you tapped, according to the Auto Sampling Period. These measurements are displayed in blue. (The second green circle may overlap differently depending on where you tap the floor plan a second time.)

- To check the Wi-Fi status, look at the icon  in the top status bar to see the channels that the AirCheck G3 is scanning in real time.

4. To stop or pause your survey, tap **PAUSE**. This changes the Undo icon to the upload icon .
- If you want to upload your results to Link-Live, tap the upload icon , select **Upload to Link-Live** to display the Link-Live sharing screen. See [Uploading AirMapper Surveys to Link-Live](#) for more

information. (You can resume your survey after uploading.)

- Tap **RESUME** to add more data points.

- To start a new AirMapper survey, open the AirMapper Settings (tap the navigation menu icon  or swipe from the left-side drawer) and select **Clear Survey**.

- To stop your survey, close AirMapper.

Conducting a Connected (Active) Survey

The steps for conducting a connected active survey have several key differences from those for a passive survey:

1. Before beginning the survey, use AutoTest to run a [Wi-Fi profile](#) that connects to the desired SSID.
2. Tap **START** to begin the survey. If you did not start the AutoTest profile or if the test is still in progress, a message displays at the bottom of the screen, and the survey cannot start.
3. Collect data as you would a passive survey, as described above.
 - If the connection is lost (such as by roaming out of range or a signal blockage), the link notification changes to an X. AutoTest continuously tries to reconnect to the SSID.

Survey points taken during this unlinked time are displayed in yellow to indicate

areas where there is not coverage for that SSID.

- You can check the Wi-Fi connection in several ways during your survey:
 - To check the Wi-Fi status, look at the icon  in the top status bar to see the channels that the AirCheck G3 is scanning in real time.
 - Swipe down from the top of the screen to expand the system notification pull-down list and display the actively connected channels and channel width.

Tap the down arrow next to NetAlly to show additional information:

 NetAlly ^

Wi-Fi linked on channel 2 @ 20 MHz

-34 dBm 72.2 Mbps Roams: 0

SSID: Fragblast

IP Address: 192.168.0.109

- If AutoTest was the recently used application other than AirMapper, you can double-tap the Recent button  at the bottom of the screen to quickly toggle between AirMapper and Autotest.

4. To stop or pause your survey, tap **PAUSE**, as described above for a passive survey.

AirMapper Survey Tips

Use these additional tips to make your survey process easier.

Changing Dwell Time During a Survey

NetAlly does not recommend that you change settings during a survey. An exception is **Dwell Time**, which sets the amount of time the AirCheck G3 lingers on each channel to gather data. You can increase the Dwell Time value to

get averages of beacon signal. To change the Dwell Time setting:

1. Tap **Pause** to pause your survey.
2. Open the AirMapper settings, (tap the navigation menu icon  or swipe from the left-side drawer).
3. Tap **Dwell Time** to set a new value.
4. Return to the AirMapper screen and tap **Resume** to return to your survey.

Add Wi-Fi Management Port Data

For active or passive surveys, the active connection data is uploaded along with your other survey data if the Wi-Fi Management port is connected to an SSID. You can then view this information in its own heatmap displays on Link-Live.

Add and Edit Comments

- To edit a comment, long-press on the comment. (If two comments are very close together, AirMapper selects the comment closest to where you pressed.) A context

menu appears. Tap **Add Comment**. A dialog appears for you to type your comment. When you are done, tap **OK** to add the comment.

- To edit or delete a comment, locate the comment, and then long-press on it. The selected comment turns dark and a menu appears. Tap **Edit Comment** to change the comment, and then tap **OK** to save the edit. To delete the comment, select **Delete** from the menu.

To Delete Survey Points

Long press over the survey point you want to delete. The selected survey point turns red and a context menu appears. If two survey points overlap, the closest survey point is selected. Tap **Delete Survey Point**.

CAUTION: There is no undo for deleting a survey point. Once deleted, you cannot recover the data.

Upload AirMapper Surveys to Link-Live

Uploading your data to Link-Live lets you view colored heatmaps and use various analytical tools.

1. Tap the upload icon .
2. Select **Upload to Link-Live** from the pop-up menu to display the Link-Live sharing screen.

**Link-Live**

by NetAlly

Survey Name

North Office

Comment

Quick Coverage Test

Job Comment

Event Check[SAVE TO AIRMAPPER FILES](#)

3. (Optional) Use the Link-Live sharing screen to enter a survey name, a comment for the overall survey, and a job comment (such as

a note about the overall job status).

NOTE: The Job Comment remains the same until you delete or change it.

4. Tap **SAVE TO AIRMAPPER FILES** to upload the data and return to the main AirMapper screen. You can then return to the AirMapper screen and tap **Resume** to return to your survey to add more data points, start another survey, or close AirMapper.

NOTE: When you upload data from a survey (or save it locally), your unit also uploads Discovery and Wi-Fi Analysis files to assist with data analysis on Link-Live. When you upload an active survey, the connection log is also uploaded.

To Export AirMapper Data to AirMagnet Survey PRO

When your survey data collection is complete, you can export the data as a .amp file for import into AirMagnet Survey PRO for advanced analysis, planning and reporting.

1. Tap the upload icon .
2. Tap **Export to Survey PRO** in the pop-up menu.

3. (Optional) Type a new name the .amp file.
4. (Optional) Tap one of the file folders displayed in the upper part of the screen to select a local file location.
5. Tap the **Save** button to create the .amp file and upload it to Link-Live (or to save the file locally).

6. Export the .amp file from Link-Live to download it to your PC for use with AirMagnet Survey PRO.

To Load and Save AirMapper Settings

You can save the entire survey configuration as named settings by tapping the disk icon in the title bar.

This menu allows you to load saved settings or to save the current settings.

Spectrum App

The Spectrum Application provides Wi-Fi analysis that measures radio frequency traffic to display data about signal strength, utilization, and noise in your environments.

The App features three graph types:

- **Frequency Spectrum** view displays a heat map across the frequency band.
- **Waterfall** view shows band and channel signal and utilization change over time.
- **Real Time** view illustrates current, average, and max-hold signal levels.

NOTE: The Spectrum application *requires* the **NXT-1000** or **NXT-2000 Portable Spectrum Analyzer**, sold separately or included in tester kits.

The NXT-2000 (shown below) replaces the NXT-1000 dual-band analyzer. NXT-2000 introduces tri-band Wi-Fi analysis for 2.4, 5, and 6 GHz.

The portable analyzers plug into the top USB port of your test unit.

[Contact NetAlly](#) if you need to acquire an NXT-2000 Portable Spectrum Analyzer.

Using the Spectrum Views

Opening the Spectrum app automatically changes the screen orientation and opens the default view: a Frequency Spectrum graph for the 2.4 GHz band. You can choose from three views of live data: [Frequency Spectrum](#) (heatmap), [Waterfall](#), and [Real Time](#).

See [Spectrum Settings](#) for instructions on changing the frequency band, changing the Waterfall View type, enabling the External Antenna, and saving settings.

Before You Begin

- Connect NetAlly's Portable Spectrum Analyzer to the **top** USB port (USB Type-A) on your AirCheck G3.
- To get more accurate test results, NetAlly recommends that you turn off your device's Wi-Fi Management Port and Bluetooth. (The Spectrum app notifies you if these services are turned on.)

To turn off management Wi-Fi and Bluetooth:

- a. Swipe down from the top of the AirCheck G3 screen to display the [Quick Settings](#) system icons.
- b. Tap the Wi-Fi icon  to disable the system Wi-Fi radio .
- c. Tap the Bluetooth icon  to disable the Bluetooth function .

Common Spectrum Actions

Use these actions in each Spectrum graph to change the view details:

-  **Pause:** Tap the Pause icon to stop updates of the display. This can help you examine patterns and anomalies without updated data overriding your current view.
-  **Resume:** Tap the Resume icon to cancel pause and continue live data updates.
-  **Refresh:** Tap the Refresh icon to clear the graph and start acquiring new data. (Refreshing also cancels pause.)
- **Display markers:** (Frequency Spectrum and Real Time views only) Tap the graph at a

particular frequency that you want to examine. A pink vertical marker displays where you tapped, and the precise Frequency is shown above the graph.

- The Frequency Spectrum view displays the selected frequency and its maximum value.
- The Real Time view displays the frequency, the frequency's current value,

the average value, and the highest measured value (Max-Hold).

- Tapping on the marker erases it. Reset the marker by single-tapping the graph again.
- **Zoom in:** Double-tap in any of the graphs to zoom in incrementally to a narrower range around a particular frequency. Double-tap again to zoom in further. When using an NXT-2000, the maximum zoomed-in range for all graphs is 20 MHz. (If you are using an NXT-1000, only one zoom level is supported.)
-  **Restore to normal view:** Tap the Restore icon to zoom back out to the full display for the frequency band. (If you are using an NXT-1000, the graph refreshes with new data.)
- **Saving results:** You can save your Spectrum results locally or upload to Link-Live. See [Uploading Results to Link-Live](#).

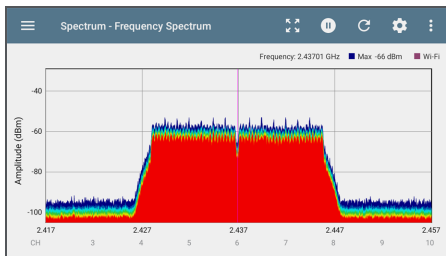

Indicator Icons

-  **External Antenna:** This icon displays when the External Antenna setting is enabled and measurements are being collected from the external antenna connection. Ensure your External Antenna is connected to the NXT-2000 Analyzer when this icon is displayed. See [Locating a Source of Interference](#).
-  **RF Saturation:** If this icon displays near the top left of a Spectrum view, you may be too close to a RF source. Move back from the source, and see [RF Saturation](#) for more details.

Frequency Spectrum View

This display uses the color spectrum to present a heatmap of the frequency band you have chosen, showing the density of recent RF measurements.

The graph below was created using a signal generator, so measurements are relatively uniform across the affected channels.

- Blues and greens ("cool" colors) indicate less RF detected at that frequency and amplitude.
- Yellow, orange, and red ("hot" colors) indicate the repeated presence of RF at that

frequency and amplitude.

- Darkest blue indicates infrequent RF while red indicates the continuous presence of RF at that amplitude.
- The range for the Y-axis (Amplitude) scales automatically according to data values.
- The X-axis displays channels and frequencies and zooms incrementally when double-tapped.
- The top of the chart shows the precise numbers for the display marker you have set.

- When the [Wi-Fi Test Port](#) is enabled, the Frequency Spectrum graph shows active Wi-Fi APs and clients by coloring the channel numbers purple and by displaying a purple bar across the active Wi-Fi frequency range at the top of the chart.

NOTE: You can enable or disable the Wi-Fi Test Port from the [General Settings](#) in the navigation drawer for any testing app.

The following image puts everything together with variable traffic, a display marker set at

2.479 GHz, Wi-Fi indicators, and 2-MHz wide Bluetooth signals:

Waterfall View

The Waterfall plot draws new data at the top of the display as it scrolls older data downwards over a period of time. This provides a visualization of historical signal measurements and channel utilization.

- The vertical axis shows the time, and the horizontal axis shows frequencies and channels.
- The colors in the waterfall represent the amplitude of a frequency at a certain time according to the scale in the upper right. Blue shows lower amplitude measurements, and lighter colors show higher amplitude signals.
- Dark blue indicates no or low channel utilization while a more solid bar of bright colors indicates high utilization.
- The waterfall has two view types. Use **Current** to detect instantaneous RF. To

smooth the data and see overall usage, change the type to **Average 5 Sweeps**, which averages five sweeps for each new line of data. This decreases the data resolution but may make the data easier to interpret in highly active RF environments. (See [Changing Spectrum Settings](#) for instructions on changing the type.)

Real Time View

The Real Time display shows the current, average, and max values across the frequency band.

- The yellow line indicates the current values.
- The blue line indicates the average values, which are calculated using all measurements accumulated since the graph was last cleared.
- The green line indicates the highest measured value (Max-Hold).
- The top of the chart shows numerical details for the display marker.
- The range for the Y-axis (Amplitude) scales automatically according to data values.
- The X-axis displays channels and frequencies.
- When the [Wi-Fi Test Port](#) is enabled, the Real Time graph shows active Wi-Fi APs and clients by colorizing the channel numbers and by displaying a purple bar across the active Wi-Fi frequency range at the top of the chart.

You can enable or disable the Wi-Fi Test Port from the [General Settings](#) in the navigation drawer for any testing app.

Uploading Results to Link-Live

To send your Spectrum results to the [Link-Live](#) website, tap the action overflow icon  at the top right of the Spectrum screen, and then tap

Upload graph to Link-Live. The [Link-Live sharing screen](#) opens.

Link-Live
 by NetAlly

Graphs Image Name

Comment

Enter Comment

Job Comment

Enter Job Comment

SAVE TO LINK-LIVE

The system creates a file name automatically using the date. You can also enter optional Comments and Job Comments to attach to the results file. The results are displayed as images on Link-Live.com.

To save Spectrum results locally, enable the **Save Locally Only** setting under [Preferences](#) in the General Settings, accessible from the left-side navigation drawer in Spectrum and other testing apps.

Locating a Source of Interference

Testing device kits that include an NXT-2000 Portable Spectrum Analyzer also contain an optional External Directional Antenna. The External Antenna connects to the NXT-2000 to assist with signal amplification for locating specific sources of interference.

The [External Antenna setting](#) must be enabled in the Spectrum App settings if you are using the NXT-2000 with the External Antenna. The antenna icon displays  to the top left of the Spectrum graph when the setting is enabled.

Attach the antenna to the NXT-2000 as show below, and point the External Antenna towards the source of interference.

See the **NXT-2000 Portable Spectrum Analyzer Instruction Sheet** for more images and details of the External Antenna cable assembly.

For more accurate RF detection when locating, turn off your tester's radios for Test and Management Wi-Fi and for Bluetooth:

- Disable Wi-Fi Management and Bluetooth from the [Quick Settings](#) by tapping their icons.
- Optionally, also disable the Wi-Fi Test Port in the [General Settings](#) from any testing App on your device.

NOTE: The Spectrum app will not indicate Wi-Fi activity (purple bars and channel numbers) while the Wi-Fi Test Port is disabled.

Point the target symbol on the External Antenna towards the source of interference you are searching for.

RF Saturation

 **RF Saturation:** When this icon displays, the NXT-2000 detects radio frequency saturation (Analog-to-Digital converter overflows), and the Spectrum graph may display unreliable data.

Move away and maintain a small distance from the RF source to avoid over-saturating the NXT-2000 sensors.

Spectrum Settings

The Spectrum Settings in the navigation drawer allow you to change the data views, change frequency bands, change the Waterfall display type, enable or disable the External Antenna, and save settings.

Changing Spectrum Views

To change the Spectrum view:

1. Tap the Menu icon  to open the Spectrum [navigation drawer](#):

2. Select the view that you want: Frequency Spectrum, Waterfall, or Real Time. See [Using the Spectrum Views](#) for information on using these views.

See [Saving App Settings and Configurations](#) for more information.

Changing Spectrum Settings

To change settings, tap the settings  icon or tap the Menu icon  and select **Spectrum Settings** from the Spectrum [navigation drawer](#). Either action opens the Spectrum settings window:

Wi-Fi Band

To change the Wi-Fi frequency band:

1. Tap **Wi-Fi Band**. This opens a selection box. (If you are using an NXT-1000 Analyzer, the 6-GHz band is not supported.)
2. Tap the button for the frequency band you want, and then tap **OK** to return to Spectrum Settings.
3. Tap the back button  to return to the Spectrum view.

Waterfall View Type

To change the Waterfall View Type:

1. Tap **Waterfall View Type**. This opens a selection box.
2. Tap the button for either **Current** or **Average-5 Sweeps**.
 - **Current** maintains the default display for the Waterfall view.
 - **Average-5 Sweeps** averages each line of waterfall data into five sweeps. This decreases some of the data resolution but may make the data easier to understand in highly active

environments.

3. Tap **OK** to return to Spectrum Settings.
4. Tap the back button  to return to the Spectrum view.

External Antenna

If you are using an NXT-2000 Analyzer with the External Directional Antenna to locate an interference source, you must enable the **External Antenna** setting:

1. Tap **External Antenna** in the Spectrum Settings to enable or disable.
2. Tap the back button  to return to the Spectrum view.

If you are using an NXT-1000 Analyzer, the **External Antenna** setting does not appear in the Spectrum Settings.

Saving Settings

To save the current Spectrum settings, tap the Save icon  in the upper right corner of the Spectrum Settings screen. This opens a menu for

you to **Load**, **Save As**, **Import**, or **Export** any changes you make to the settings.

iPerf Test App

iPerf is a standardized network performance tool used to measure UDP or TCP throughput and loss.

The iPerf app runs an iPerf3 performance test to a NetAlly Test Accessory or an iPerf server endpoint.

The NetAlly Test Accessory runs network connection tests, uploads results to [Link-Live Cloud Service](#), and acts as an iPerf server endpoint for iPerf tests run by other NetAlly handheld testers.

Learn more about the Test Accessory from [NetAlly.com/products/TestAccessory](https://netally.com/products/TestAccessory).

If you are using an iPerf server installed on a PC or other device as an endpoint, iPerf version 3 is required to run the AirCheck G3 iPerf test. You can download iPerf server software from <https://iperf.fr>.

iPerf Settings

To run an iPerf test, you must configure your AirCheck G3 unit to communicate with your iPerf endpoint. You can manually enter an iPerf server address, or select a NetAlly Test Accessory's address in the iPerf settings.

Saving Custom iPerf Settings

The iPerf app allows you to save a configuration of settings for running an iPerf test to the same endpoint later.

iPerf Settings	
IPv4 Address	10.250.3.182
Port	5201 (iperf3)

Tap the save icon  to load, save, import, and export configured settings. See [Saving App Settings Configurations](#) for more instructions.

Once you save a settings configuration, the custom name you entered appears at the top of

the iPerf settings and results screens. In the example images here, the user has saved a custom iPerf configuration called "Server Room Endpoint."

Test Accessories in Discovery

You can start an iPerf test from the Details screen for a Test Accessory in the [Discovery app](#) using the floating action button.

1. Open the Discovery app, and select an active **Test Accessory** from the main

Discovery list to open its Details screen.

2. Tap the floating action button ([FAB](#)) to open the action menu. 

3. Select the **iPerf** app button to open the iPerf app with the IP address populated from the Test Accessory in Discovery.

NOTE: You can also select **Browse** in the FAB menu to open the Test Accessory's Web Interface, where you can view its status and configure its settings.

Configuring iPerf Settings

To configure the iPerf test settings manually, open the settings  on the iPerf screen.

 Server Room Endpoint 
IPv4 Address 10.250.3.182
Port 5201 (iperf3)
Duration 10 seconds
Protocol TCP
Direction Upstream/Downstream
Upstream Threshold 10 Mbps
Downstream Threshold 10 Mbps

Tap each field to enter or revise selections as needed. Changed settings are automatically applied. When you finish configuring, tap the back button  to return to the iPerf test screen.

NOTE: iPerf runs on the test port interface only.

IPv4 Address: Tap the field to enter or select the IPv4 address of the target iPerf server. Only IPv4 addresses are allowed for iPerf testing.

IPv4 Address

192.168.1.128

- 172.24.0.147
- 172.24.0.147
- 172.24.0.156
- 172.24.0.156
- Angela's Test Accessory
- 172.24.0.114

CANCEL OK

A drop-down list in the IPv4 Address dialog shows all the Test Accessories the AirCheck G3 has discovered through the [discovery process](#), as well as any Test Accessories that are claimed to

the same [Link-Live](#) organization as your AirCheck G3.

NOTE: Clear the address field in the dialog to see the full list of discovered Test Accessory addresses.

Port: The default iPerf3 port number is 5201. Tap the field to enter a different port number.

NOTE: The iPerf port number entered here must match the port number used by your iPerf server. If needed, consult the Test Accessory User Guide (NetAlly.com/products/TestAccessory).

Duration: This setting is the length of time for one direction, Upstream or Downstream, of the iPerf test. If the Direction setting below is set to both Upstream/Downstream, the total test time is twice the value set here. Tap the field to select a new duration or enter a custom value. The default is 10 seconds.

Protocol: TCP is the default protocol. Tap the UDP selector to switch to UDP.

NOTE: iPerf tests running the TCP protocol automatically run at the fastest rate

possible. When running a UDP protocol test, the iPerf app attempts to run at the selected Bandwidth.

Direction: You can run an iPerf test Upstream, Downstream, or both. The default is Upstream and Downstream. Tap this field to set the test for only one direction.

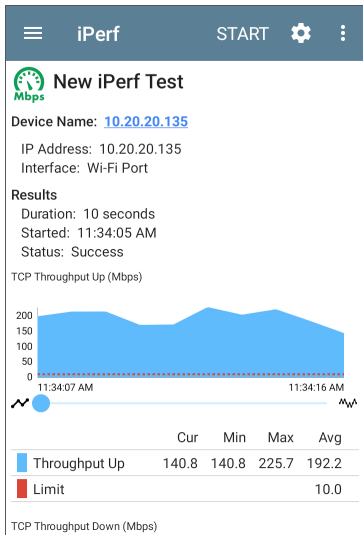

Upstream and Downstream Bandwidth: These fields only appear if the **UDP Protocol** is selected. They specify the desired target bandwidth for the iPerf Test using the UDP protocol.

Upstream and Downstream Thresholds: Thresholds are the values the AirCheck G3 uses to grade the test as **Pass** or **Fail**. iPerf thresholds are throughput rates. The default is 10 Mbps. Tap the threshold fields to select a different value or enter a custom one.

Running an iPerf Test

Ensure that you have an active link on the Interface ([Test Port](#)) from which you are running the iPerf test. Wi-Fi test ports require that an AutoTest Wi-Fi Profile has run to establish a link. Management ports link automatically if a connection is available.

Tap the **START** button on the main iPerf screen to begin testing.

Test characteristics and status are displayed at the top of the iPerf results screen while the lower part of the screen displays a real-time graph of the TCP or UDP Upload and/or Download speeds.

To pan and zoom on the graphs, you can swipe, double tap, and move the slider. See the [Trending Graphs](#) topic for an overview of the graph controls.

Device Name: Hostname or address of the iPerf server or Test Accessory.

IP Address: IPv4 address of the iPerf server.

Interface: The AirCheck G3 Test Port from which the test is running.

Results

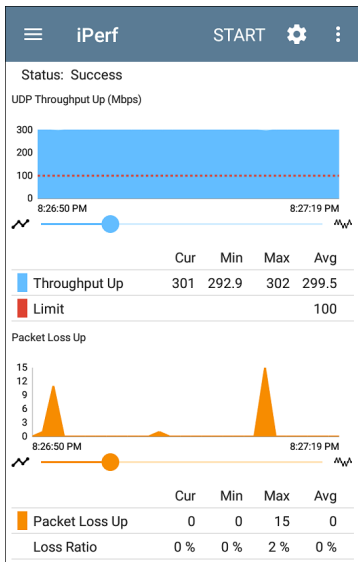

- **Duration:** Configured Duration from the iPerf settings
- **Started:** Time the test started
- **Status:** Success or failure status of the test.

TCP/UDP Throughput Up and Down graphs:

The iPerf graphs plot the throughput rate to (Up) or from (Down) the iPerf server in Mbps.

The table below each graph displays the Current, Minimum, Maximum, and Average rates.

Limit: This is the **Threshold** from the iPerf app's settings. The threshold value is also displayed on the graph as a red dotted line.

UDP Packet Loss Up and Down graphs: When running a UDP protocol test, the iPerf results also display graphs and tables of Packet Loss. Values for the number and percentage of packets lost are displayed in the table below the

graph. The Packet Loss Up graph and table do not display measurements until results are received from the iPerf server at the end of the upstream test.

Note that the Packet Loss Up number could be much less than the Packet Loss Down number.

Uploading Results to Link-Live

To send your iPerf results to the [Link-Live](#) website, tap the action overflow button  at the top right of the iPerf screen, and then tap **Upload to Link-Live**.

**Link-Live**

**SAVE TO LINK-LIVE**

The [Link-Live sharing screen](#) opens and allows you to revise the auto-generated file name and attach comments to the iPerf result, which is displayed on the Results  page on Link-Live.com.

Link-Live Cloud Service

The screenshot displays the Link-Live Cloud Service interface. On the left, a sidebar shows a list of test results, including 'Shared ACK-G3-E - 550078', 'CyberScope - 53022C', 'ACK-G3-E - 550078', 'ACK-G3-E - 580078', 'EtherScope nRG - 530208', 'EtherScope nRG - 530208', 'Office ACKG3 - 55089C', 'Office ACKG3 - 55089C', and 'Ken's EtherScope nRG - 530208'. The main area shows a detailed view of the 'Shared ACK-G3-E - 550078' test, dated 1/23/23 1:43 PM. The test details are organized into sections: 'Test', 'Link', 'Access Point', 'DHCP', 'DNS', and 'Gateway'. The 'Test' section shows the MAC address '08C817-550078', Device 'AirCheck G3', Type 'Wireless', Profile 'InOfficeIPvd-Connect to LRG', Firmware '2.2.0.43', Wired Management IP '10.250.3.31', and Wi-Fi Management IP '10.24.8.181'. The 'Link' section shows PHY Rate '400 Mbps', Retry Rate '0%', Signal '-34 dBm', Noise '-90 dBm', SNR '56 dB', and Success. The 'Access Point' section shows SSID 'LRG', BSSID '80c8170b168-c844cf', 802.11 Types 'a, ac, n', Channel '189', Channel Util (%) '5', and Non-802.11 Util (%) '0.5'. The 'DHCP' section shows IP '10.24.8.247', Server '10.24.8.1', Subnet '255.255.254.0', DHCP Total '3417 ms', and Local IP 'fe80::202:17ff:fe65:78'. The 'DNS' section shows DNS '127.0.0.1'. The 'Gateway' section shows Gateway '10.24.8.1'. A 'Share Album' button is visible in the top right corner of the test details area.

Link-Live Cloud Service is a free, online system for collecting, tracking, organizing, analyzing, and reporting your test results. AutoTest results are automatically uploaded once your AirCheck G3 is claimed.

The comprehensive AirCheck G3 offers more features for analyzing your network in Link-Live than previous testers. Claim your AirCheck G3 to Link-Live.com to access these functions:

- Check for software updates and update your AirCheck G3 software.
- Download third-party applications from the NetAlly [App Store](#) to use on your AirCheck G3.
- Automatically upload [AutoTest](#) results each time you run AutoTest.
- Attach test and [Job](#) comments to Link-Live uploads, and automatically sort your results and files into folders in Link-Live.
- Upload test, discovery, and analysis results from the NetAlly apps, including Discovery, Wi-Fi, Path Analysis, AirMapper, and iPerf. See [Link-Live and Testing Apps](#) for more about uploading.

Getting Started in Link-Live Cloud Service

To start, create a user account at Link-Live.com, and sign in. You can open the Link-Live website in the AirCheck G3's web browser to create and manage your account.

Claiming the Unit

On Link-Live.com

1. The first time you sign in to Link-Live.com, a pop-up window appears, prompting you to claim a device.

If you already have a user account and other devices claimed to Link-Live, navigate to the **Units** page from the left side [navigation drawer](#), and then click the **Claim Unit** button  at the lower right corner of the screen .

2. Then, select the AirCheck G3 image, and follow the claiming instructions on the Link-Live website.

On the AirCheck G3 Unit

1. Open the Link-Live app. Your unit's MAC address is displayed.

2. Tap **CLAIM NOW** on the Link-Live app screen.
3. When prompted by the instructions on the Link-Live website, enter the MAC address.

After you claim your AirCheck G3 to Link-Live, a software update may be available. If so, a notification appears in the Status Bar . Open the

[Top Notification Panel](#), and select the notification to update your unit.

↓ Link-Live

Software Update Notification

Software update available.

See [Updating Software](#) for more information.

After Claiming

Once your AirCheck G3 is claimed to the Link-Live Cloud Service, it automatically uploads your AutoTest results each time you run AutoTest. You can also upload a test comment and a picture with your test results using the floating action buttons (FABs) for the [Wi-Fi Test Results](#). You can automatically sort your results into folders in Link-Live using test and [Job comments](#).

If your AirCheck G3 is not connected to an active network, any test results, comments, or images are stored in memory (buffered) and uploaded once a connection is established.

For more information on how to use the [Link-Live.com](#) website, click or tap the

navigation menu icon  at the top left of the Link-Live.com pages, and select  Support.

Unclaiming

You may need to unclaim your unit from Link-Live to transfer it to another user or if you no longer want to send data to Link-Live.com.

To unclaim your AirCheck G3 from Link-Live, tap the [navigation drawer](#) icon  in the Link-Live app, tap [About](#), and then tap **UNCLAIM**.

AllyCare Code

The AllyCare Code button appears at the bottom of the About screen next to the Export Logs button if your unit is not claimed.

[ALLYCARE CODE](#) [EXPORT LOGS](#)

Tap **AllyCare Code** to open a dialog to enter an AllyCare Activation Code.

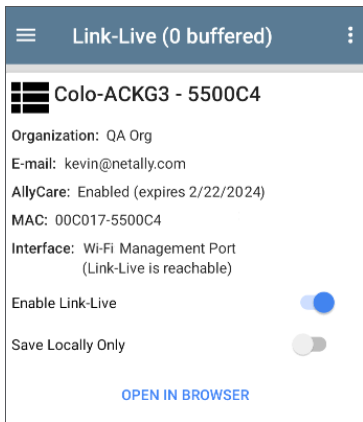

Private Link-Live Settings

Use these settings only when your organization has deployed a private instance of Link-Live. Consult your IT organization for setting details.

Link-Live App Features

The main Link-Live app screen on your AirCheck G3 facilitates the claiming process, displays Link-Live related information, and allows you to enable or disable Link-Live.com uploads as needed.

Link-Live App Screen

The AirCheck G3 unit's name that displays on the Link-Live.com is shown to the right of the Link-Live icon . You can change this name on the Link-Live.com **Units**  page.

Organization is the Link-Live organization where the unit is claimed.

E-mail is the first e-mail address assigned to the unit, which receives test result notification emails.

The Organization and Email address shown here are assigned on the Link-Live.com website. The fields displayed in AirCheck G3's Link-Live app are informational.

AllyCare indicates the status of NetAlly's optional AllyCare services. See [NetAlly.-com/Support](https://netally.com/Support) for more information.

Interface shows which network interface Link-Live currently uses to post results and the network status.

The **Enable Link-Live** toggle button turns the Link-Live features on or off. If Link-Live is disabled here, the AirCheck G3 cannot upload test results or check for software updates. The

Upload to Link-Live options do not appear in the testing apps.

Tap the **OPEN IN BROWSER** link to open Link-Live.com on the AirCheck G3's web browser.

The "(# buffered)" in the Link-Live screen header indicates the number of files stored in the device memory when no active network connection is available. The buffered file types are listed below the main app card.

 **Link-Live (2 buffered)**

[OPEN IN BROWSER](#)

Discovery Snapshot
Apr 25, 2023 11:16:24 PM

Wi-Fi Snapshot
Apr 25, 2023 11:16:25 PM

The buffered files displayed automatically upload to Link-Live.com once your AirCheck G3 connects to an active network.

Saving Locally Only

If you do not want to send your results to the Link-Live website, you can still save results locally to your AirCheck G3 as JSON files.

Tap the **Save Locally Only** toggle field in the Link-Live app to save the JSON files to your unit.

Select **SHOW FILES** to open the **Files** app. The .json files are saved in the **Downloads > TestResults** folder.

Link-Live			
Name			
	wifi_20191023_131553.json	1:15 PM	1.42 MB
			File
	pathAnalysis_20191023_131608.json	1:16 PM	1.25 kB
			File
	discovery_20191017_213427.json	Oct 17	2.62 MB
			File
	autotest_results_20191017_230221....	Oct 17	1.96 kB
			File

See the [Managing Files](#) topic for an overview of the Files app.

You can transfer the JSON files to a PC for analysis, or you can download a JSON viewer app from the App Store  on your AirCheck G3.

With **Save Locally Only** enabled, options for uploading or saving to Link-Live (described in the [Link-Live and Testing Apps](#) section below) still display in the NetAlly testing apps. However, the results are saved to the internal Link-Live

storage folder, and not uploaded to Link-Live.com.

Job Comment

The [left-side navigation drawer](#) for the Link-Live app lets you enter or change the Job Comment. The **Job Comment** attaches to all test results and files uploaded to Link-Live, until you change or delete it. In contrast, other **Comments**, like those attached to [Wi-Fi](#) AutoTest results or [Discovery](#) results, are only attached to one set of test results or uploaded file.

Both comment types appear on [Link-Live sharing screens](#) like the one below:

**Link-Live**
by NetAlly

File Name
client1024rsa-new.pem

Comment
Certs

Job Comment
South Campus Wi-Fi

To enter or change the Job Comment in the Link-Live app:

1. With the Link-Live app open, tap the menu icon  or swipe right from the left side of the screen.

2. Tap the **Job:** field.
3. Enter a comment in the dialog box.
4. Tap **SAVE**.

Note that the **Job Comment** field appears in other Link-Live sharing screens, allowing you to change it from multiple locations on the AirCheck G3. No matter where you change the Job Comment, it is updated everywhere on the unit.

Software Updates

The left-side [navigation drawer](#) for the Link-Live app also lets you check for and download any available software updates. See [Updating Software](#) in the Software Management chapter.

System Notifications

Link-Live can send messages to your test unit. They are displayed in the system [Notification Panel](#).

Link-Live and Testing Apps

Once your unit is claimed, the Link-Live app works with several of the testing apps to upload test results, discovery and analysis data, comments, and images to the Link-Live website. Link-Live.com categorizes the uploads from different apps on corresponding webpages, as shown below:

LINK-LIVE WEBPAGE	APP UPLOADS
 Results	AutoTest and iPerf results, images, connect logs, and other files when saved to a test result
 Uploaded Files	Captures, images, connect logs, and other file types
 Analysis	Discovery, Wi-Fi, and Path Analysis results

LINK-LIVE WEBPAGE

APP UPLOADS

**AirMapper**

AirMapper Heatmaps

If your unit is not claimed to [Link-Live.com](https://link-live.com) or if Link-Live is disabled on the app screen, the links and buttons for uploading to Link-Live in the testing apps do not appear.

Link-Live Sharing Screens

Save to Link-Live

**UPLOAD TO LINK-LIVE**

Whenever you select a button or link, like those above, to Upload, Save, or [Share](#) to Link-Live, a Link-Live sharing screen appears with the appropriate options for the data type.

For example, the Link-Live sharing screen for Discovery or Wi-Fi app data allows you to upload to the Analysis  page on Link-Live.com.

5. Enter any **comments** as needed, and then tap **SAVE TO LAST TEST RESULT**.

Basic Wired Testing With Link-Live Pairing

Link-Live allows you to add several simple wired tests by pairing a NetAlly LinkSprinter or Test Accessory with your AirCheck G3. This ability lets you run wired tests and view the results on your unit. For example, you may wish to make sure that an AP is getting adequate PoE and basic connectivity while performing a Wi-Fi survey or running other Wi-Fi tests. The wired data is uploaded to Link-Live and then shared to your AirCheck G3 to give you more complete information.

Tests available are:

- Power Over Ethernet (PoE)
- Wired link verification
- DHCP link verification
- Gateway detection
- Link-Live access verification
- (LinkSprinter only) Wi-Fi availability

You can also view the information on Link-Live, which includes supplemental information fields.

Before You Begin

- You must have a Test Accessory iPerf Tester or a LinkSprinter Pocket Network Tester. To acquire one of these devices, contact your [netally.com](https://www.netally.com) representative or visit: [netally.com](https://www.netally.com)
- Read the user guide available for your product, available at: <https://www.netally.com/support/user-guides/>

Link-Live Setup

1. Log into your Link-Live account. (You can use a PC or start the Link-Live app on your AirCheck G3 and then select the **Open in Browser** option.)
2. Make sure your AirCheck G3 is **claimed** to Link-Live.
3. Using the same Link-Live organization to which you claimed your AirCheck G3, claim your Test Accessory or LinkSprinter as per

the instructions in the documentation.

4. Select the **Units** option from the left-side menu. This displays your claimed devices.
5. Select your AirCheck G3. (On a PC, you can use the filter icons at the top of the list.) This displays your device information.
6. Scroll down until you see the Pair Unit heading.
7. Tap or click on the **Pair Unit** toggle button next to the Test Accessory or LinkSprinter that you want to pair with your unit.
8. Turn off your Test Accessory or LinkSprinter and unplug its Ethernet wire connection.

Run the Paired Test and View Results

To run a paired wiring test:

1. With your Test Accessory or LinkSprinter turned off, plug the Ethernet cable connection that you want to test into the test port. (All test LEDs activate for a few seconds, and then the PoE icon LED  remains on if there is adequate power from

the connection.)

2. Wait about 90 seconds for a test to complete. All five LEDs turn green if the tests are successful. The test results are uploaded to Link-Live and then shared with your AirCheck G3.
3. To view the results on your AirCheck G3:
 - a. Wait for the paired test icon  to appear on the system notification bar.
 - b. Swipe down from the top of the screen to view the notifications list.
 - c. Locate and tap on the down arrow for the notification from Link-Live that shows a new result from your Test Accessory or LinkSprinter.

- PoE voltage is listed.
- Bold fields in the Link details show actual speed and duplex.
- The IP Address is the DHCP IP.
- The DNS is the primary server (DNS 1).
- Ping times to reach google.com are not included.

NOTE: Successive tests replace the data in the notification.

4. To view the results on a PC:
 - a. In Link-Live, select the **Results** option from the left-side menu. This displays your test results for all your claimed devices.
 - b. Select the results you want for the paired Test Accessory or LinkSprinter from the list. (On a PC, you can use the Search function to look for specific devices, folders, etc.) This displays the same information as the AirCheck G3 system notification described above,

but it adds additional information fields:

- Link polarity
- DHCP subnet mask
- Gateway ping time and public IP address
- Ping time for google.com
- (LinkSprinter only) Information on the nearest switch (switch name, model, IP/MAC address, port number, and type)

Specifications and Compliance

This chapter contains device specifications and required compliance information.

AirCheck G3 Specifications

General

Dimensions	4.01 in x 7.71 in x 1.65 in (10.2 cm x 19.6 cm x 4.2 cm)
Weight	1.05 lbs (0.48 kg)
Battery	Rechargeable lithium-ion battery pack (3.63 V, 9.75 Ah, 36.39 Wh)
Battery Run Duration, Charge Time	Typical run duration: 8 hours Typical charge time: 3 hours
Display	5.0-inch color LCD with capacitive touchscreen (720 x 1280 pixels)
Host Interfaces	(2) USB Type-A Ports (1) USB Type-C On-the-Go Port
Memory	Approximately 8 GB available for storing test results and user applications

Charging Adapter	USB Type-C 45-W adapter: AC Input Power 100-240 V, 50-60 Hz; DC Output Power 15 V (3 A)
Supported IEEE Standards	Wi-Fi: 802.11 ax/ac/a/b/g/n
LEDs	1 LED (Status Indicator)

Tri-band Wireless

AirCheck G3 has two internal Wi-Fi Radios:

- **Wi-Fi Testing** – WiFi 6/6E 2x2 MU-MIMO wireless radio 802.11ax
- **System Wi-Fi, Bluetooth, and Management** – 1x1 Dual-band 802.11ac Wave 2 + Bluetooth 5.0 and BLE wireless radio 802.11ac

WiFi 6/6E 2x2 MU-MIMO Tri-band Radio for Testing

Security	64/128-Bit WEP Key, WPA, WPA2, 802.1X (TKIP, AES)
Regulatory Domain	World Mode
Antenna Gain	1.1 dBi peak in the 2.4-GHz band; 3.2 dBi peak in the 5-GHz band

Data Rates

- 802.11a: 6, 9, 12, 18, 24, 36, 48, 54 Mbps
- 802.11b: 1, 2, 5.5, 11 Mbps
- 802.11g: 6, 9, 12, 18, 24, 36, 48, 54 Mbps

- **802.11n 20 MHz:** 7.2, 14.4, 21.7, 28.9, 43.3, 57.8, 65, 72.2, 86.7 Mbps
- **802.11n 40 MHz:** 15, 30, 45, 60, 90, 120, 135, 150 Mbps
- **802.11ac 20 MHz:** 7.2, 14.4, 21.7, 28.9, 43.3, 57.8, 65, 72.2, 86.7 Mbps
- **802.11ac 40 MHz:** 15, 30, 45, 60, 90, 120, 135, 150, 180, 200 Mbps
- **802.11ac 80 MHz:** 32.5, 65, 97.5, 130, 195, 260, 292.5, 325, 390, 433.3 Mbps

Operating Frequencies

The AirCheck G3 receives on all of the frequencies in every country but transmits only on the frequencies and channels allowed in the country.

These are the center frequencies of the channels that the Wi-Fi radio supports.

- **2.4-GHz band:** 2.412 – 2.484 GHz (channels 1 through 14)
- **5-GHz band:** 5.150 – 5.825 GHz (channels 34, 36, 38, 40, 42, 44, 46, 48, 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136, 140, 144, 149, 153, 157, 161, 165)

Modulation

- **802.11a:** BPSK (6 and 9 Mbps), QPSK (12 and 18 Mbps), 16 QAM (24 and 36 Mbps), 64 QAM (48 and 54 Mbps), OFDM

- **802.11n/ac:** BPSK (MCS0), QPSK (MCS1 and MCS2), 16 QAM (MCS3 and MCS4), 64 QAM (MCS5, 6, and 7), OFDM
- **802.11ac:** 256 QAM (MCS8 and MCS9), OFDM
- **802.11b:** DBPSK, BPSK (1 and 2 Mbps), QPSK (2 Mbps), CCK (5.5 and 11 Mbps)
- **802.11g:** BPSK (6 and 9 Mbps), QPSK (12 and 18 Mbps), 16 QAM (24 and 36 Mbps), 64 QAM (48 and 54 Mbps), OFDM

Bluetooth v5 and BLE

- **Frequency Range:** 2.402 – 2.480 GHz
- **Max TX power:** 14 dBm (4 dBm BLE)

External Directional Antenna Accessory

- Minimum gain: 6.4 dBi peak in the 2.4-GHz band, 8.9 dBi peak in the 5-GHz band, and 8.6 dBi peak in the 6 GHz band.
- Reverse-polarity SMA plug
- Antenna frequency range: 2.4 – 2.5, 4.9 – 5.9 GHz, 6.0 – 7.1 GHz
- External antenna port is receive-only (no transmit).

Environmental Specifications

Operating Temperature	32°F to 113°F (0°C to +45°C) NOTE: The battery will not charge if the internal temperature of the unit is above 113°F (45°C).
Operating relative humidity (% RH without condensation)	90% (50°F to 95°F; 10°C to 35°C) 75% (95°F to 113°F; 35°C to 45°C)
Storage Temperature	-4°F to 140°F (-20°C to +60°C)
Shock and vibration	Meets the requirements of MIL-PRF-28800F for Class 3 Equipment
Safety	IEC 61010-1:2010: Pollution degree 2
Altitude	Operating: 4,000 m; Storage: 12,000 m
EMC	IEC 61326-1: Basic Electromagnetic Environment CISPR 11: Group 1, Class A

Certifications and Compliance Statements

⚠ CAUTION: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Complies with 47 CFR Part 15 requirements of the U.S. Federal Communications Commission.

Conforms to relevant Australian Safety and EMC standards.

Listed by the Canadian Standards Association.

Conforms to relevant European Union directives.

Complies with United Kingdom and

European Economic
Area radiation
exposure limits.

FCC Notices

Contains FCC IDs

RYK-WNFQ268AXBT,
WA7-9377

Contains IC IDs

6158A-WNFQ268AXBT,
6627C-9377

This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause

harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Caution: Any changes or modifications made to the equipment without the approval of manufacturer could void the user's authority to operate this equipment.

The device is for indoor use. This equipment may only be operated indoors. Operation outdoors is in violation of 47 U.S.C. 301 and could subject the operator to serious legal penalties.

The operation of this device is prohibited on oil platforms, cars, trains, boats, and aircraft, except that operation of this device is permitted in large aircraft while flying above 10,000 feet. Operation of transmitters in the 5.925-7.125 GHz band is prohibited for control of or communications with unmanned aircraft systems.

Warning: FCC Radiation Exposure Statement: This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 25 cm between the radiator and your body.

Australian IEC 61326-1:2013: Basic Electromagnetic Environment; CISPR 11: Group 1, Class A

Group 1: Equipment has intentionally generated and/or uses conductively-coupled radio frequency energy that is necessary for

the internal function of the equipment itself.

Class A: Equipment is suitable for use in all establishments other than domestic and those directly connected to a low-voltage power supply network that supplies buildings used for domestic purposes. There may be potential difficulties in ensuring electromagnetic compatibility in other environments due to conducted and radiated disturbances.

Innovation, Science and
Economic Development Canada

Innovation, Sciences et
Développement économique Canada

Warning: For indoor use only.

Pour une utilisation en intérieur uniquement.

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR

d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes: (1) le dispositif ne doit pas produire de brouillage préjudiciable, et (2) ce dispositif doit accepter tout brouillage reçu, y compris un brouillage susceptible de provoquer un fonctionnement indésirable.

Warning: IC Radiation Exposure Statement: This equipment complies with RSS-102 radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 27 cm between the radiator & your body.

Avertissement: Cet équipement est conforme aux limites d'exposition aux rayonnements RSS-102 établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec une distance minimale de 20 cm entre le radiateur et votre corps.

Caution: The device for operation in the band 5150-5530 MHz is only for indoor use to reduce

the potential for harmful interference to co-channel mobile satellite systems.

Avertissement: les dispositifs fonctionnant dans la bande 5150-5530 MHz sont réservés uniquement pour une utilisation à l'intérieur afin de réduire les risques de brouillage préjudiciable aux systèmes de satellites mobiles utilisant les mêmes canaux.

This radio transmitter has been approved by Innovation, Science and Economic Development Canada to operate with the antenna types listed in the SparkLAN WNFQ-268AXI(BT) Datasheet, with the maximum permissible gain indicated. Antenna types not included in this list that have a gain greater than the maximum gain indicated for any type listed are strictly prohibited for use with this device.

Cet émetteur radio a été approuvé par Innovation, Sciences et Développement économique Canada pour fonctionner avec les types d'antennes répertoriés dans la fiche technique SparkLAN WNFQ-268AXI(BT), avec le

gain maximal autorisé indiqué. Les types d'antenne non inclus dans cette liste qui ont un gain supérieur au gain maximum indiqué pour tout type répertorié sont strictement interdits pour une utilisation avec cet appareil.

European Union (EU) Radiation Warning Statement and Con- formance Notices

Warning: This equipment complies with EU radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 cm between the radiator and your body.

Selling Countries:

(NI)

This device complies with the following EU Directives: Directives 2014/53/EU, 2014/35/EU, and 2014/30/EU.

Accessory Information:

Adapter Model No.: FSP045-A1BR

Input: AC 100-240 V, 50/60 Hz 1.2 A

Output: DC 15 V, 3 A

Japan Indoor Use Statement

For Japan, the AirCheck G3 is restricted for indoor use in the 5150-5530 MHz band only.

Taiwan Regulatory Statement

Article 12: For low-power RF motors that have passed the type certification, companies, firms or users are not allowed to change the frequency, increase the power, or change the features and functions of the original design without permission.

第十二條 經型式認證合格之低功率射頻電機，非經許可，公司、商號或使用者均不得擅自變更頻率、加大功率或變更原設計

之特性及功能。

Article 14: The use of low-power radio frequency motors shall not affect flight safety or interfere with legal communications; if any interference is found, it shall be stopped immediately, and it shall be continued to be used until there is no interference. The legal communication referred to in the preceding paragraph refers to the radio communication operated in accordance with the provisions of the Telecommunications Law. Low power radio frequency motors are subject to interference from legal communications or radio wave radiating electrical equipment for industrial, scientific and medical use.

第十四條低功率射頻電機之使用不得影響飛航安全及干擾合法通信；經發現有干擾現象時，應立即停用，並改善至無干擾時方得繼續使用。前項合法通信，指依電信法規定作業之無線電通信。低功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。

Wireless information transmission equipment

operating in the 5.25-5.35 kHz frequency band is limited to indoor use.

在5.25-5.35 秊赫頻帶內操作之無線資訊傳輸設備，限於室內使用。

Complies with United Kingdom and European Economic Area radiation exposure limits

This equipment complies with the UK and EEA radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 cm between the radiator and your body. The frequency and the maximum transmitted power in the UK and European Conformity are listed below:

2402-2480 MHz (LE) 9.63 dBm

2405-2480 MHz 9.81 dBm

2412-2472 MHz 19.96 dBm

5180-5240 MHz 22.95 dBm

5260-5320 MHz 22.98 dBm

5500-5700 MHz 22.98 dBm

5745-5825 MHz 22.98 dBm

5955-5825 MHz 22.98 dBm

5955-6415 MHz 22.97 dBm

6489-7987.2 MHz -41.58 dBm/RBW

The device is restricted to indoor use only when operating in the 5295 to 6425 MHz frequency range.

Hereby, NetAlly declares that the radio equipment AirCheck G3 is in compliance with Radio Equipment Regulations 2017.
