

AirMagnet® Survey PRO

Wireless Design & Site Survey Analysis Software

Key Features

- Predictively model Wi-Fi 7 network changes or design a new network without physically rolling out APs
- Collect real-world data by performing true end-user experience measurements using AirMapper™ Site Survey on the AirCheck® G3 Pro, EtherScope® nXG, or CyberScope®
- Generate heatmaps that provide full visibility of WLAN coverage, noise, SNR, interference, throughput, data rates, retries, loss, and more on the 2.4/5/6 GHz bands*
- Use customizable templates to create professional reports in different formats

Overview

Network professionals conducting and analyzing AirMapper Wi-Fi site surveys (using AirCheck G3, EtherScope nXG, or CyberScope) will many times find areas of the network with insufficient coverage or poor performance. Resolving those issues could require changes to the infrastructure, either installing new APs, relocating existing APs, and/or configuration changes. With its powerful design tools AirMagnet Survey PRO enables network professionals to predictively model the required changes, ensuring that problems found during the site survey are fixed correctly, resulting in improved Wi-Fi network performance and connectivity.
