

# LinkRunner® 10G v2.3 Release Notes

June 22, 2023

These LinkRunner 10G Release Notes briefly describe the new features and enhancements included in the release.

[See software upgrade Instructions at the end of this document.](#)

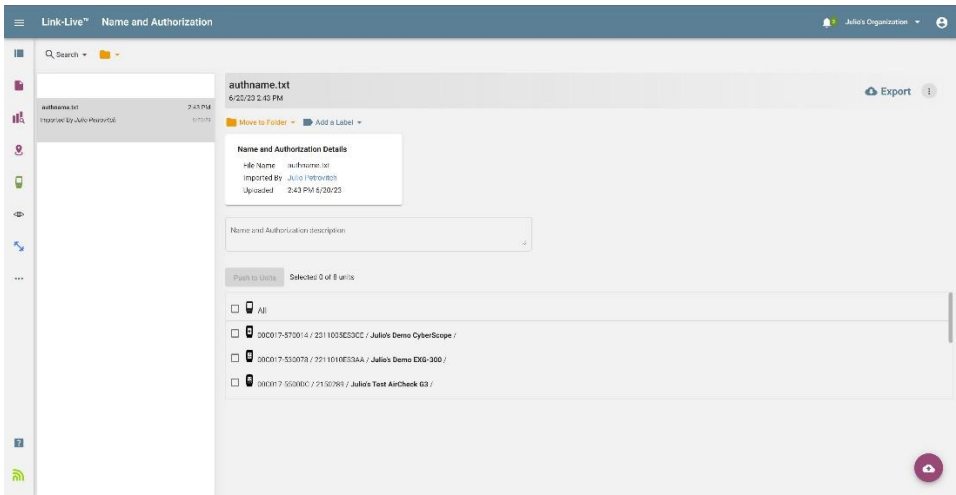

## Version 2.3 New Features

All apply to both LinkRunner 10G 100 and 200 models unless noted.

### Download an Authorization List from Link-Live

- Authorization lists allow you to differentiate between known and unknown devices on your network quickly and easily. They are also a great way to assign device names or aliases!
- On this release not only will you be given the option to manually import an Authorization list into your LinkRunner 10G, but you will now be able to download the list from Link-Live too. To do so, you will first need to upload an Authorization list to Link-Live:
  - Select the **Units** management option in Link-Live.
  - Select the **Settings** option.
  - Select the **Import Name and Authorization** option.
  - Drag and drop or browse to the Authorization list you want to import.
  - Select the **Import** option.
- After you have uploaded an Authorization list to Link-Live the next step will be to push the file to your LinkRunner 10G. To do that:
  - Select the **Units** management option in Link-Live.
  - Select the **Settings** option.
  - Select the **Name and Authorization** option.
  - Select the Authorization list you want to push to units in the field.
  - Select the units you want to push the file to and then select the **Push to Units** option.

**Note:** For detailed information on the Authorization list format supported by the LinkRunner 10G please refer to page 378 of the [User Guide](#).

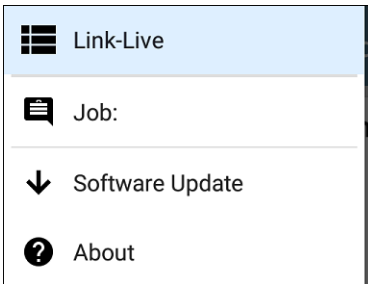

### Other Changes in Version 2.3:

- While using the Link-Live remote-control option you will now be able to use the PgUp/PgDn/Up/Down keys in your keyboard to easily scroll through a long list in the **Discovery** and **Nmap** apps.
- To help improve security on your network, the **VNC** port will now be disabled by default.
- While configuring **Layer 3** options in the **Performance** app you will now be able to select from CS1 to CS7 classes when using the **TOS With DSCP** option.
- You will now be able to use larger files (100 MB and 500 MB) when using the **AutoTest** app to perform an **FTP Test**.

## Upgrading to Version 2.3

If you have claimed your unit to Link-Live.com, we highly recommend following the Over the Air (OTA) Firmware Update procedure:

1. To check for available software updates at any time, open the Link-Live App from the Home screen.
2. In the Link-Live App, touch the menu icon or swipe right to open the left-side Navigation Drawer.

3. Touch **Software Update**. The Software Update screen opens and displays the version number of any available updates.
4. Touch **Download + Install** to update the System.
5. When finished, the unit will restart.

## Thank you for your investment in NetAlly products!

This software update is a key benefit of your AllyCare™ Premium Support Services contract. For more information about AllyCare benefits, see [AllyCare Support · Customer Self-Service \(netally.com\)](https://netally.com)
