

LinkRunner® 10G v2.0 Release Notes

June 8, 2022

These LinkRunner® 10G version 2.0 Release Notes briefly describe the new features and enhancements included in the release.

Performance Test Improvements

When configuring a Performance Test stream, you can now override the Layer 3 UDP port on a per stream basis. This allows a separation of the port used for management communication from the port used for the UDP payload.

Support for Link-Live Private

The Link-Live app allows the user to specify the URL for private instance of Link-Live. This dialog now warns the user that settings changes may require them to reclaim their unit to the public instance of Link-Live.

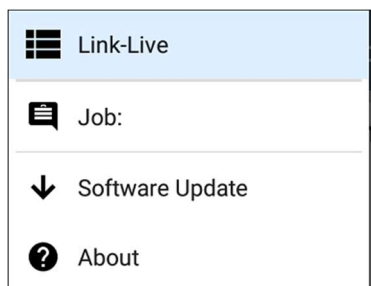

PoE Injector

In the AutoTest App when testing with a PoE injector, the logic has been changed to add detection for a *non-standard* first-class event. When detected the UI will display “Passive PoE Injector” instead of “PoE Injector”.

Upgrading to Version 2.0

If you have claimed your unit to Link-Live.com, we highly recommend following the Over the Air (OTA) Firmware Update procedure:

1. To check for available software updates at any time, open the Link-Live App from the Home screen.
2. In the Link-Live App, touch the menu icon or swipe right to open the left-side Navigation Drawer.

3. Touch **Software Update**. The Software Update screen opens and displays the version number of any available updates.
4. Touch **Download + Install** to update the System.
5. When finished, the unit will restart.
